AIRCRAFT PROCUREMENT, NAVY
Volume II:
BUDGET ACTIVITY 5

Department of Defense Appropriations Act, 2007

Aircraft Procurement, Navy

For construction, procurement, production, modification, and modernization of aircraft, equipment, including ordnance, spare parts, and accessories therefor; specialized equipment; expansion of public and private plants, including the land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway, \$10,393,316,000, to remain available for obligation until September 30, 2009.

"In accordance with the President's Management Agenda, Budget and Performance Integration initiative, this program has been assessed using the Program Assessment Rating Tool (PART). Remarks regarding program performance and plans for performance improvement can be located at the Expectmore.gov website."

DESCRIPTION: This line item funds modifications to the EA-6B aircraft. The EA-6B Prowler is a four-seat derivative of the A-6 Intruder medium attack aircraft. Among its features are a computer controlled electronic surveillance and control system and high power jamming transmitters in various frequency bands that are contained in pods mounted externally on the five aircraft pylons. The overall goal of the modifications budgeted in FY 2008 is the procurement of Outer Wing Panel (OWP), Low Band Transmitters, Block 89A upgrades, ASN-130A Replacement, J52 Reliability Improvements, Multifunctional Information Distribution System (LINK-16), ICAP III upgrades, and Productive Ratio initiatives.

Exhibit P-3a

MODIFICATION TITLE: ALQ-99 PODS(OSIP 019-79)MODELS OF SYSTEMS AFFECTED: EA-6 SERIES TYPE MODIFICATION: Reliability/Mission Capability**DESCRIPTION / JUSTIFICATION:****UNIVERSAL EXCITER UPGRADE:**

The Universal Exciter Upgrade (UEU) provides a 30% improvement in reliability over that of the current Universal Exciter (UE / MTBF = 100 hrs), increased maintainability, elimination of multiple configurations and performance improvements. ORD #474-88-97 defines the UEU requirements. The UEU entered Engineering and Manufacturing Development in 1991 and achieved Milestone III approval for full rate production in Apr 96. A contract for 119 UEUs was awarded in Sep 96. Follow-on procurements were made in fiscal years 98-01, bringing total UEU procurement quantities up to 480. Pursuant to that inventory objective, an FY99 Congressional (Kosovo Supplemental) add of \$39M was received in Sep 99. The modification of UEs to UEUs was accomplished via a "turn key" sole source contract. Initial UEU deliveries occurred in Jul 98, which allowed for an Initial Operational Capability in Apr 99. ALQ-99 Exciters are Weapons Replaceable Assemblies that are readily removed and installed in the ALQ-99 Pod, thus no installation effort/funding is associated with this program. This capability will be available for all EA-6B/EA-18G aircraft, which includes four Naval Air Reserve aircraft.

LOW BAND TRANSMITTER:

The Low Band Transmitter (LBT) will provide the EA-6B with an expanded jamming capability against the Early Warning/Acquisition Radars and Communication Links of modern Integrated Air Defense Systems. Reliability and maintainability will also be greatly improved over that of current ALQ-99 Transmitters. Following a competitive acquisition and Milestone II approval, Engineering and Manufacturing Development was initiated in Sep 96. Critical Design Review was conditionally approved in Dec 97; however, a follow-up review to close out action items was completed in Nov 98. Testing to date has consisted of prototype testing conducted at government and contractor facilities. This testing has successfully demonstrated the key performance parameters identified in OPNAV/N88 Itr Ser No. N88OC3/6S663399 of 26 JUL 96 can be attained by the present design. Fabrication of Engineering Development Models (EDMs) began in FY00. EDMs are being used for contractor and Navy testing required to support LRIP and Milestone III approval. The LBT inventory objective is 195. ALQ-99 Transmitters are Weapons Replaceable Assemblies that are readily removed and installed in the ALQ-99 Pod, thus no installation effort/funding is associated with this program. Aircraft Operational Flight Program changes are required to support aircraft integration of this transmitter. This capability will be available for all EA-6B/EA-18G aircraft, which includes four Naval Air Reserve aircraft.

SUPPORT EQUIPMENT:

Introduction of new/modified ALQ-99 pod equipment requires new/modified organizational, intermediate and depot level support equipment, such as modifications to the pod test set to support Low Band Transmitter and Band 7/8 Transmitter, modifications to High Power Device Test Set (HPDTS) to extend frequency coverage to test Band 9/10 transmitters, new Test Program Sets to test Low Band Transmitter and Band 9/10 Transmitters and modified Intermediate/depot level support equipment to test Band 7/8 Transmitters.

ENGINEERING CHANGES:

This ALQ-99 PODS Operational and Safety Improvement Program covers ALQ-99 Pod modifications required to improve reliability/maintainability/availability, enhance mission capability, resolve obsolescence issues, and correct deficiencies found in testing or in the field.

BAND 9/10 TRANSMITTER:

The Band 9/10 Transmitter (Band 9/10) provides the EA-6B an expanded jamming capability against target tracking/fire control radars of modern Integrated Air Defense Systems. Reliability and maintainability are also greatly improved over that of current ALQ-99 Transmitters. Following a competitive acquisition, Engineering and Manufacturing Development of the Band 9/10 was initiated in Jan 92. Production began in FY98, with Initial Operational Capability being accomplished in Nov 99. A total of 231 Band 9/10 Transmitters were procured between FY98 and FY03 with the last transmitter delivered in May 05. ALQ-99 Transmitters are Weapons Replaceable Assemblies that are readily removed and installed in the ALQ-99 Pod, thus no installation effort/funding is associated with this program. This capability will be available for all the EA-6B/EA-18G aircraft, which includes four Naval Air Reserve aircraft.

EXTENDED HIGH BAND RADOME:

A modified ALQ-99 Extended High Band Radome is required for compatibility with the Band 9/10 Transmitter (Band 9/10). This Radome incorporates unique sections of the radome composite structure to prevent damage by impinging energy radiation from the Band 9/10. Between FY98 and FY01, 250 ALQ-99 radomes were modified to this configuration. Future requirements for these radomes will be met by new production, vice modification, as there are no more existing assets to modify. ALQ-99 Radomes are Weapons Replaceable Assemblies that are readily removed and installed in the ALQ-99 Pod, thus no installation effort/funding is associated with this program. This capability will be available for all EA-6B/EA-18G aircraft, which includes four Naval Air Reserve aircraft. ALQ-99 received a total of \$1.5M in FY06 Congressional add and \$1.653M in GWOT Supplemental funding.

Notes:

- UEU Repair of GFE costs are included in the UEU Installed Equipment line.
- Install schedules not provided for GFE that fits into the POD without structural modification, or for equipment not requiring APN-5 funding for installation into the POD/aircraft (e.g.: LBT, UEU).
- Total Band 9/10 Transmitters include 5 EDM's.
- \$1.5M FY05 Supplemental was added for ALQ-99 TJS Band 4 Sustainment. \$1.653M FY06 GWOT Supplemental was added for TJS Pods.
- \$11M added to FY05 from OSIP 01-01 (ICAP III kit). Funding realigned from ICAP III to purchase 7 additional LRIP LBTs for Early Operational Capability (EOC) in support of GWOT.
- LBT quantities increased in FY08-FY11 due to additional funding provided throughout FYDP.
- \$7.5M moved from FY06 LBT to OSIP 01-01 (ICAP III kit).
- Quantity of 16 LBTs were bought in FY06 with United States Army Force Protection funds.

Exhibit P-3a

MODIFICATION TITLE: EA-6B STRUCTURAL IMPROVEMENTS(OSIP 032-85)MODELS OF SYSTEMS AFFECTED: EA-6 SERIESTYPE MODIFICATION: Safety of Flight

DESCRIPTION / JUSTIFICATION: This Omnibus Operational and Safety Improvement Program covers EA-6B Structural modifications (includes ejection seat, canopies, etc.) and EA-6B peculiar avionics modifications arising from test/deficiencies and those reliability and safety of flight related improvements. Included are Structural Improvement modifications which includes fixes for areas found to be deficient during aircraft fatigue test, Wing Center Sections (WCS) which replace wings that have either cracked due to stress corrosion or have reached their wing fatigue life limit, Structural Data Recording System (SDRS) which will provide a more accurate measurement of Fatigue Life Expenditure (FLE), Outer Wing Panels (OWP) will replace OWP's that have reached their fatigue life limit, Aircraft wiring Upgrades, Hydraulic Systems Upgrades, and Flight Control Surface Upgrades. This OSIP also includes the Connectivity and USQ-113 programs. In FY02 received supplemental funds in the amount of \$35M for 10 additional WCS and \$29.4M to reopen the OWP production line. In FY03, total program increased as a result of Congressional Plus-ups in the amount of \$9M for 3 additional WCS, USQ113 Jammers \$10.5M, On-Board Oxygen Generating System (OBOGS) \$1M, and Ready Room Mission Rehearsal System \$3.1M, and an additional \$60M for OWP. In FY04, total program increased as a result of Congressional Plus-ups in the amount of \$15M for WCS acceleration and \$70M for OWP's in the FY2004 Emergency Supplemental Appropriations Act, \$2M Plus-up for Ready Rm Mission/ Mission Reprogramming Unit, \$4M Plus-up for USQ113, and \$35M for OWP's via Congressional add. Funds have been budgeted in FY07 and FY08 for the WCS and OWP production/installation line shutdown.

ASN-130A REPLACEMENT: Funding for this upgrade was provided via a Cost Reduction Effectiveness Improvement Council (CREIC) initiative during the POM-02 process. The aging ASN-130A will be replaced with the ASN-172, with a combined inertial navigation/GPS system 2nd EGI. Reliability and maintainability will be improved. Outer Wing Panel (OWP) replacement program includes ongoing fatigue life expenditure (FLE) analysis. The solution may range from an airframe change to improve FLE to replace the OWP to ensure the EA-6B availability through FY-2015. In FY02 received supplemental in the amount of \$25M to procure up to 3 additional Outer Wing Panels. Also received \$4.25M DERF funds for OWP production line start up and tooling in FY02. Received \$60M FY03 Supplemental for OWP in 2003 and \$70M FY04 Supplemental for OWP and \$15M for WCS acceleration (of which \$29.3M of OWP and \$3.5M of WCS acceleration was recinded; a total of \$32.8M). 47 total OWP sets are on contract.

MISSION REPROGRAMMING UNIT (MRU): This update to DSMU resulted from an Affordable Readiness Initiative (ARI) that provides an upgrade to the existing memory input/output capability of the mission computer. Tape driven devices which are no longer being produced are being replaced with PCMCIA cards that are more reliable and maintainable. Funding for this upgrade resided in OSIP 01-01 during the PB01. EA-6B Power PC initiative: This initiative proposes to add a COTS PowerPC processor to the AYK-14, XN-11/CP-2357. This special EA-6B AYK-14 chassis has already been upgraded to support COTS SRAs on its VME backplane. Funding is required for COTS hardware (Processor SRA) and integration kit (Memory Bridge SRA), addition of a few laboratory support tools, development testing, and modification to technical publication source data and maintenance plans. EA-6B (MK-GRU-EA7) EJECTION SEAT INITIATIVE: The GRUAE7 ejection seat, used in the EA-6B aircraft uses standard British hardware to build the GRUAE7 ejection seat. This hardware is replaced 100% during depot rework and 224 day "O" level maintenance. Aircrews are reporting increased fatigue resulting from extended time in the cockpit due to physical positioning of personnel. Materials used during seat over haul could be of an improved quality. The ejection seat sequencing system is an electro-mechanical design which will be improved by changing to a digital time delay system. These two action will improve the aircrew endurance and survivability.

EA-6B DIGITAL FLIGHT CONTROL SYSTEM (DFCS): The DFCS program comprises the adaption of existing Digital Flight Control Computer (DFCC) and Digital Control Panel (DCP) to replace the existing Air Navigational Computer (ANC) and control panel presently fitted to the EA-6B aircraft. This replacement DFCS will be configured to ensure only the minimum number of aircraft changes are required. Intended to eliminate the problem of spurious inputs to Flight Control Systems. Structural Data Recording System (SDRS) and G-Meter Replacement: The SDRS provides a more accurate recording of the g-force hits on the aircraft. The air crew is reporting disparities between cockpit G-meter and SDRS up to 0.7g difference between the read outs. The cockpit G-meter and the g forces recorded by the SDRS. The current cockpit G-meter is an analog design meter and the replacement G-meter is a digital design. Data provided to the cockpit G-meter will be taken from the motion pick-up transducers as does the SDRS. As a secondary mode, the replacement G-meter has the capability to function independently of the motion pick-up transducer input. Installs are scheduled as part of ICAP II Block 3 installations.

EA-6B FLIGHT CONTROL SURFACE UPGRADES: Upgrade of current EA-6B primary flight control surfaces, which include Inboard Slats, Rudders, Outboard Flaps and Horizontal Stabilizers, due to material condition. Utilizing Phosphoric Acid Anodized (PAA) Honeycomb Core technology will improve operational availability of flight control surfaces by 60%. Bond durability between the face and core sheets and corrosion resistance is significantly improved and reduces total ownership costs by 30%. Additionally, some structural surfaces will be upgraded to improve operational availability per engineering analyses. EA-6B Hydraulic System Upgrades: Hydraulic System Improvements, based on current technology, are available to improve legacy components on the EA-6B. Upgrades to the hydraulic actuators to include new technology seals to prevent leakage, new barrels and endcaps to improve operational reliability and reduce FLE on components. FLE can be improved by as much as 65% with this technology. Hydraulic reservoir upgrade to include, replacement of endcap to reduce safety impact, and improve operational availability. Hydraulic pumps will be replaced with a similar design used on the F-16 and planned for the B-52, which offers six times greater reliability and improved maintainability.

EA-6B AIRCRAFT WIRING UPGRADE: The wiring originally installed during OEM production of the EA-6B aircraft and Weapons Replaceable Assemblies (WRAs) has continued to degrade over time. Much of the wiring originally installed conformed to specifications that have since been superseded. Post production engineering analyses have also been conducted that indicate some of the wiring originally installed has potential for severe degradation, which results in increased possibility of electrical arcing and fire hazard. Additionally, EA-6B avionics systems will be upgraded to improve operational availability, per engineering analyses. Additionally, EA-6B avionics systems will be upgraded to improve operational availability, per engineering analyses.

EA-6B USQ-113: Proposed upgrade to USQ-113 communications jamming system includes a jam toggle mode switch package, high power amplifier, and transmitter antenna that will enable the USQ-113 to maintain pace with evolving target sets. USQ-113 received a total of \$9.5M in FY05 Supplemental funding. \$4.005M FY06 Supplemental GWOT funds provided for the upgrade to the USQ-113 communications jamming system which will modify existing hardware to enhance the jamming effectiveness of the system by increasing the number of modulation types from three to twelve. This upgrade would enable the USQ-113 to be effective against high priority targets that the current system cannot achieve.

Exhibit P-3a

MODIFICATION TITLE: J-52 ENGINES(OSIP 111-87)

MODELS OF SYSTEMS AFFECTED: EA-6 SERIES TYPE MODIFICATION: Reliability Upgrade

DESCRIPTION / JUSTIFICATION: J52 Engine Improvements: The J52 engine is a legacy gas turbine engine, which powers the EA-6B and has been in service since the 1960's. This initiative will capitalize on R&D efforts funded through the Engine Component Improvement Program (CIP) and OMN funded analysis of engine failure modes. Specific reliability discrepancy trends have been identified and appropriate Engineering Change Proposals (ECP) and Power Plant Changes (PPC) have been developed to address the risk of uncontained turbine blade failures and improve engine reliability and time on wing. The results include an improved Turbine Exhaust Case (TEC) that provides low pressure turbine (LPT) containment and other durability and reliability improvements designed to increase engine time on wing. 20 TEC kits were purchased in June 2004 and were delivered in FY06. Funding will also be used for the Power Trim Indicator system and engineering and logistics labor required to complete development of maintenance planning products across all 10 ILS elements. Efforts include the analysis of J52 data, maintenance plan, Level of repair analysis, reliability centered maintenance to establish preventive maintenance schedules, development of technical manuals, provisioning technical documentation, and logistics support tail for associated support equipment. Also includes the development of source data, and limits to revise engine build standards in order to meet J52 reliability goal of 760 hours time on wing.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Development of the Improved Turbine Exhaust Case (TEC) began in FY95 using engine CIP and contractor funds. Testing and ECP approval was completed in the first quarter of FY98 (OCT 97), followed by a production contract award. All ECPs are approved and Technical Directives (TD) are completed or in process. Incorporation of initial PPC 306 TEC kits is in process. Initial PPC 304 kits are on order and NAVICP is currently procuring attrition parts.

DD Form 2454, Jun 86

Exhibit P-3a

MODIFICATION TITLE: BLOCK 89A AVIONICS I(OSIP 042-93)

MODELS OF SYSTEMS AFFECTED: EA-6 SERIES TYPE MODIFICATION: Safety of Flight/Reliability

DESCRIPTION / JUSTIFICATION: This omnibus Operational and Safety Improvement Program covers EA-6B ICAP II Block 89A Avionics systems modifications to install required communications, navigation, and miniaturized technology improvements. The avionics common systems upgrade includes incorporation of: (1) AN/ARC-210 VHF/UHF radios having SINGARS and HAVEQUICK modes for inter-operability with Air Force, ground, and NATO forces. (2) The Embedded GPS Inertial Navigation System (EGI) provides a closely coupled GPS-INS solution and replaces the ASN-50 AHRs which has very poor reliability. (3) Full integration of the Electronic Flight Instrumentation System (EFIS), Control Display Navigation Unit (CDNU), and Digital Signal Data Converter (DSDC), which were installed as part of AFC778-779. This OSIP provides for upgrade of the DSDC for use in Block 89A. The DSDC functions as an interface unit for the EFIS and is connected to the 1553 Navigation data bus to provide additional navigation data to the aircrew. (4) The AYK-14 computer will be upgraded with Very High Speed Integrated Circuit Technology (VHSIC) improving processing, memory, and throughput. The upgraded computer (CP-2357) will retain the outer form factor of the current computer and incorporate a new backplane that supports the new VHSIC processor Module and provides VME-bus expansion slots. Discrete and Serial Modules (DSM) replace the Serial Interface Module-A (SIM-A) cards. (5) Mission Planning System: The AN/TSQ-142 Mission Planner provides operational flight program loading, maps, EW libraries, jammer techniques, HARM data, and performs data reduction. Modifications to the AN/TSQ-142 are required to support the Block-89A upgrade, and to support transition of EA-6B MPS. (6) Misc. Avionics: Additional Engineering Change Proposals (ECP) and procurement of avionics, such as ARC-199 Radios, CIU/E, HARM, Dual EGI, and Night Vision capability in all aircraft. \$1.371M FY06 Supplemental GWOT funds provided for the Exterior NVD Lighting System. Inherent system design failure caused a rewrite of the technical directive and forced design changes to the Exterior Lighting control box, which will have to be retrofitted to all EA-6B aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The ARC-210 UHF/VHF radio is a common avionics system to be installed in all Navy aircraft, and has undergone OPEVAL on the F-18, UH-1, and other platforms. The EA-6B has been approved for installation. The EFIS system completed successful OPEVAL and was approved for full rate production and will require minimal upgrade FOT&E for the required interface and incorporation of EGI data. The EGI is common avionics with the F-18 EGI and has been extensively flight tested in that platform. The AYK-14 (XN-) computer utilizes modules that are common avionics to Navy inventory, and a chassis similar to the current XN-4. The similarity and commonality of the upgraded AYK-14 required little additional qualification testing. DT began on the Block -89A system in FY-98, with an intensive integrated Test and Evaluation period. Testing of software, upgraded avionics, including some regression testing of existing functionality, and testing of the mission planning system are currently being conducted.

Exhibit P-3a

MODIFICATION TITLE: ICAP III(OSIP 001-01)

MODELS OF SYSTEMS AFFECTED: EA-6 SERIES TYPE MODIFICATION: Safety of Flight/Reliability

DESCRIPTION / JUSTIFICATION: This Operational and Safety Improvement Program covers the EA-6B Improved Capabilities III (ICAP III) systems modifications to install required radar and communications receiver, displays, and connectivity improvements. Additionally, this modification removes over 70 aging and unreliable Weapons Replaceable Assemblies (WRAs). Specifically, the modification program replaces the ALQ-99 receiver System with the LR-700/ ALQ-218 receiver system, replaces the TDY-43 display system with a new COTS based display system for the Pilot and three Electronic Countermeasures Officers (ECMOs), replaces the Recorder Reproducer Set (RRS) with a new Digital Recorder, incorporates the Multi-Mission Advanced Tactical Terminal (MATT) which provides reception of datalinks such as TIBS, incorporates the USQ-113 Communication Receiver/Jammer with the Onboard System, updates mission planning for ICAP III, and provides provisions for Link-16. The course of maturing ICAP III to full potential will consist of 4 Block upgrades to deliver approximately 15 months apart.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Following a Full and Open Competition, Milestone II approval was received, and an EMD RDT&E development contract was awarded to the Northrop Grumman Corporation in March 1998. Following a DT/OT test period, completion of an OA and an LRIP decision, an LRIP contract was awarded in FY03. Following completion of OPEVAL and a Milestone III decision, a full rate production contract was awarded 2nd quarter FY06.

- Aircraft are inducted concurrent with other Depot work to maximize Primary Aircraft Inventory (PAI) levels and is not impacted despite delay in initial ICAP III kit deliveries.
- ICAP III Kit is delivered in three parts. Part 1 of the kit delivery is delivered 12 months after ARO. Also production rate for ICAP III kit was increased to maintain IOC schedule requirements.
- ICAP III and MIDS are interconnected programs, but have their own OSIPs. However, procurement kit quantities and kit install quantities will match because the goal is to have both MIDS and ICAP III work as part of a system. As a result, the installs will be done at the same time to ensure that the two are placed on a common aircraft.

MODIFICATION TITLE: MIDS/LINK 16(OSIP 005-03)

MODELS OF SYSTEMS AFFECTED: EA-6 SERIES TYPE MODIFICATION: Safety of Flight/Reliability

DESCRIPTION / JUSTIFICATION: This Operational and Safety Improvement Program covers integration of required flight systems and Link-16 into the EA-6B. These programs cover procurement and installation of (a) Government Off the Shelf (GOTS) Inter-cockpit Communications System (ICS), CXP (IFF), TACAN Modification, and modification of the of Pre-Planned Product Improvement (P3) Ethernet processor into the already installed AN/AYK-14 XN-11 and (b) previously developed and approved for production MIDS Low Volume Terminal. These modifications will allow the EA-6B aircraft to fly with new FAA mandated requirements and to participate in the Link-16 network. Items within (a) above are required prerequisites for (b) installs. Training Systems, Publications, and Support Equipment will be procured.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The MIDS LVT is a common DoD system. The Navy will procure an existing ICS system based on requirements and via a competitive contract. The AYK-14 XN-11 Ethernet modification is complete.

DESCRIPTION: This line item funds modifications to AV-8B aircraft. The AV-8B is a single engine, single crewmember aircraft capable of vertical/short take-off and landing (V/STOL) operations. The AV-8B meets the Marine Corps requirements for a light attack aircraft to provide responsive offensive air power that can operate at austere forward bases in direct support of ground forces. The overall goal of the modifications budgeted in FY 2008 is to continue incorporation of Operational and Safety Improvements to the aircraft; continued update of TAV-8B trainer aircraft to better align with operational aircraft; continued incorporation of OSCAR; incorporation of Readiness Management Plan structural changes; and incorporation of AV-8B F402-RR-408 Engine safety and operational changes.

The AV-8B active inventory (21 June 2005) consists of 4 major configurations:

- 17 two-seat TAV-8B aircraft,
- 5 DAY Attack aircraft,
- 38 NIGHT Attack Aircraft, and
- 92 Night Attack/RADAR aircraft.

Retrofit quantities of each ECP depend on the aircraft configuration type if & when the change was introduced into production.

*\$33.9M received in FY 2007 Title IX.

MODIFICATION TITLE: OMNIBUS O&S IMPROVEMENTS(OSIP 001-91)

MODELS OF SYSTEMS AFFECTED: TAV-8B, AV-8B Day, Night, Night/Radar TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION:

Each ECP description includes the AV-8B configuration affected by the change, and if applicable, when it was introduced into production. ECP-217, Emergency Battery Backup, provides electrical power to the landing gear in the event of a major power failure - TAV-8B, Day. ECP-246, Canopy Restraint, incorporates an improved pyrotechnic device to provide separation to the pilot on ejection - TAV-8B. ECP-248, Power Lever Angle Unit (PLAU), provides critical in-flight engine control, is being relocated from the engine bay to the cockpit to reduce the failure rate - TAV-8B, Day, Night, and FY99 & prior Radar. ECP-251, Nose Wheel Steering (NWS), a Safety change, provides improved pilot control over nose wheel steering responsiveness for critical landing conditions - TAV-8B, Night, FY96 & prior Radar. ECP-254, Inlet Guide Vane Controller (IGVC), a Safety change, provides improved -408 engine (via RR-ECP-3759) responsiveness during critical maneuvers - TAV-8B, Night, FY96 & prior Radar. ECP-255R1, Digital Flap Controller (DFC), a Safety change, provides improved flap control range and failure response during critical operations - TAV-8B, Day, Night, FY97 & prior Radar. ECP-256, Jet Pipe Temperature (JPT), a Safety change, eliminates the erroneous engine temperature returns - TAV-8B, Night, and FY96 & prior Radar. ECP-257, Digital Electronic Controller Unit (DECU), a Safety change, provides an improved power supply that corrects power interruptions during critical maneuvers - TAV-8B, Night, and FY96 & prior Radar. ECP-269R1, Frame 12, incorporates high vibration structural modifications to absorb increased vibrations which cause fatigue cracks - TAV-8B, Night, & Radar. ECP-271, an improved mounting bracket for the 100% LERX structure reduces maintenance problems and improves readiness - Night, FY96 & prior Radar. ECP-278, installs more durable cables for the Radar Warning Radar System - Night, Radar. ECP-300, Landing Gear Control, replaces the striker pad inside the landing gear control handle. FY07 Title IX funding completes installation of kits in two remaining TAV-8Bs, in order to sustain the training requirements of Marine Fixed Wing Attack Training Squadron 203 (VMAT-203). Pilot Training Rate (PTR) shortfalls since the beginning of OIF compel the addition of these two training aircraft to meet pilot training demand in support of OIF and the Global War on Terrorism (GWOT). Incorporation of the above ECPs is required for the FY07 supplemental requirement for the TAV-8B refurbishment of two TAV-8B trainer aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

NWS flight test completed Feb 98. NWS & IGVC V&V completed third quarter FY98. DFC and JPT V&V completed second quarter FY98. DECU V&V completed first quarter FY98 and incorporation initiated. Initial design/ V&V of ECP-217 was completed in 2nd quarter FY90 and a replacement battery was identified in 3rd quarter FY97 to allow final installations. ECP-271 design/V&V was completed 3rd quarter FY99. Installation reinitiated to complete modification program. ECP-278 design completed in 2nd quarter FY99. L660 GTS/APU design was completed 2nd quarter FY97 and rework initiated in 3rd quarter FY97. L580 GTS/APU modification rework was completed in 4th quarter FY97. GEC-11 modification was completed in 4th quarter FY97.

Exhibit P-3a

MODIFICATION TITLE: KAPTON WIRE REPLACEMENT (OSIP 003-96)

MODELS OF SYSTEMS AFFECTED: TAV-8B TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION:

The Kapton Wiring Replacement (ECP-277) S, R & M modification is required to replace the MIL-W-22759 (TEFZEL) wiring in TAV-8B aircraft delivered prior to September 1999. TAV-8Bs with KAPTON (MIL-W-81381) insulated wire suffer from high failure rate due to frequent incidents of chafing resulting in wire fires. The KAPTON (MIL-W-81381) wired airplanes also require frequent and costly maintenance actions to continue flying. Replacement of this wiring is expected to improve aircraft readiness. This modification was introduced in production FY1989 TAV-8B aircraft cum 16 & subsequent which deleted the KAPTON (MIL-W-81341) insulated wiring and replaced it with irradiated TEFZEL wiring which is much more resistant to chafing and fire. FY07 Title IX funding provides for the retrofit of the two remaining TAV-8Bs (cum 15 and below) currently in inventory that have not received this ECP, in order to sustain the training requirements of Marine Fixed Wing Attack Training Squadron 203 (VMAT-203). Pilot Training Rate (PTR) shortfalls since the beginning of OIF compel the addition of these two training aircraft to meet pilot training demand in support of OIF and the Global War on Terrorism (GWOT). Incorporation of the KAPTON wiring is required for the FY07 GWOT Title IX supplemental requirement for the TAV-8B refurbishment of two TAV-8B trainer aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

This modification was designed and incorporated in all production baseline aircraft delivered after September 1989. AFP not applicable. An installation validation commenced July 2000 and commenced Aug 2001.

MODIFICATION TITLE: TAV-8B PERFORMANCE UPGRADE(OSIP 025-99)

MODELS OF SYSTEMS AFFECTED: TAV-8B TYPE MODIFICATION: Upgrade

DESCRIPTION / JUSTIFICATION:

Update all AV-8B Trainer aircraft to better align with operational aircraft by incorporating Night Vision Goggle (NVG) lighting and the -408 engine. ECP-276 (NVG lighting) incorporation allows for training of fleet pilots in NVG tactical flight operations during initial AV-8B flight training under the supervision of an instructor pilot. Currently, all NVG training is performed in the operational squadrons in single piloted aircraft after completion of initial pilot training. Earlier introduction of pilot NVG training/proficiency enhances the training environment. Improves configuration standardization with current Night/Radar NVG compatible components. ECP-276 is being installed on 17 aircraft currently in the inventory. The -408 engine is not thrust limited to the extent of the current -406A/B engines. ECP-275 (-408 Engine) provisions incorporation will allow expansion of VSTOL training time and increase the vertical landing performance safety margin by 2,000 pounds of thrust. Additionally, initial pilot training will be at the same performance levels experienced in the operational squadrons. Configuration consistency between Trainer and fleet Night/Radar aircraft will also be enhanced. Trainer aircraft cum T16 and above have -408 provisions incorporated and require engines only. Trainer aircraft cum T1 through T15 require both -408 engine provision kits and -408 engines. ECP-275 will be installed on 12 of the 13 T15 & below aircraft currently in the inventory. ECP-288 will field a modified Operational Flight Program to support the full -408A engine capabilities. ECP-291 installs the Night Attack Display computer. Due to the upgraded engine, Frame 12 stiffeners will be installed on all TAV-8B aircraft concurrently with ECP-275. FY07 Title IX funding provides for the installation of kits in the two remaining TAV-8Bs in order to sustain the training requirements of Marine Fixed Wing Attack Training Squadron 203 (VMAT-203). Pilot Training Rate (PTR) shortfalls since the beginning of OIF compel the addition of these two training aircraft to meet pilot training demand in support of OIF and the Global War on Terrorism (GWOT).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

Initial design of the NVG and -408A aircraft kits began in November 1998. Engine provisioning software development (ECP-288) was initiated in November 1998.

Exhibit P-3a

MODIFICATION TITLE: AV-8B LITENING POD(OSIP 023-00)

MODELS OF SYSTEMS AFFECTED: AV-8B Night Attack & Radar/Night Attack TYPE MODIFICATION: Upgrade

DESCRIPTION / JUSTIFICATION:

The system will integrate and procure an external targeting pod that includes an infrared (IR) and low-light TV targeting device capable of detecting, classifying, auto-tracking, and designating air-to-surface targets. The system will support first-pass autonomous delivery of conventional, precision guided, and accurate munitions to include Laser Maverick, GBU-12 and GBU-16 and JDAM (Joint Direct Attack Munition). The system will provide targeting capabilities for the AV-8B fleet of Night Attack and Radar/Night Attack aircraft through the end of its service life. The addition of the LITENING II Targeting Pod gives the AV-8B (Night and Radar) the capability to perform precision targeting. Congressional adds of FY01 \$80M, FY02 \$24.7M, FY03 \$28.0M and FY04 \$37.0M to procure additional pods. FY07 supplemental funds are provided for AV-8B Litening capability on Station 4/Centerline to support the movement of the litening targeting pod to the AV-8B centerline station allowing carriage of both left and right hand configured pods, which increases the AV-8Bs ordnance capacity by 200%. Reduced sensor masking and elimination of asymmetry problems associated with targeting pod carriage on a wing station will yield better aircraft handling, increased bring-back capability, and significantly increased combat effectiveness in support of OIF and the Global War on Terrorism (GWOT).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

The Targeting Pod is a non developmental item and has been in full production for several years. It was a winner of a targeting FLIR competition for the Air Force Reserve and Air National Guard and put in service on their F-16s 2nd Qtr FY00. The design, integration, and testing of the Targeting Pod for the AV-8B was done on the Radar and/or Night Attack during 3rd Qtr FY00. The integration will utilize: existing aircraft software, a weapons station adapter, and Targeting Pod interface software. PEO(A) had approved the acquisition strategy to acquire the pods through an existing USAF contract and provided a targeting pod capability to the Fleet in 1st Qtr FY02. Additional full Litening integration to utilize targeting information from the Litening Pod in OC1.2 to create aircraft targeting solutions will be developed and tested under this OSIP and introduced under the H20 OFF program. Video datalink with the ability to transmit Litening POD video (to Rover III grand stations utilized by forward air controllers) was introduced as Rover upgrades. Station 4 efforts to determine feasibility of carrying the Pod on centerline station to allow for more weapons carriage on other wing stations. The ability to carry the Litening Pod on wing stations 2,5,6 and multi-target cueing is included in the H4.0/H5.0 Program. Future upgrades will include retrofit current Rover Pods with new transmitter and upgrading existing Pods to Rover configuration. Congressionally directed funding in the amount of \$1.7M was allocated in FY06 for Litening on Station 4 (Centerline) in support of Global War on Terrorism (GWOT).

Exhibit P-3a

MODIFICATION TITLE: OPEN SYSTEMS CORE AVIONICS REQUIREMENT & PRECISION STRIKE(OSIP 012-02)

MODELS OF SYSTEMS AFFECTED: AV-8B Night, AV-8B Night/Radar TYPE MODIFICATION: Upgrade

DESCRIPTION / JUSTIFICATION:

The current AV-8B avionics do not have sufficient processor throughput and memory to support planned system upgrade. The OSCAR program will update the existing obsolete avionics using Commercial Off the Shelf (COTS) open system architecture hardware that has object-oriented design (OOD) and higher order language (HOL) software. This OSIP supports the procurement and retrofit installation of the Mission System Computer (MSC), and Warfare Management Computer (AMC) and Warfare Management Computer (WMC) being developed under the OSCAR program. This OSIP also supports the procurement and retrofit installation of MIL-STD-1760 wiring. The installation of the MIL-STD-1760 wiring to support JDAM and other new weapons will require the addition of wiring to the wing, pylons, fuselage, additional circuit breakers, and a new relay panel. ECP-289 ECCM Mod Kits are being installed concurrent with OSCAR to provide the full integration of the Havequick/SINGARS capability.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

This system upgrade (ECP-270R2, ECP-285) is the production incorporation of the MSC, WMC and software developed under the OSCAR program. The OSCAR program developed, integrated and operationally tested the new MSC, WMC, and Operational Flight Program software that will use the MK-83 Joint Direct Attack Munitions on the AV-8B as well as full integration of Havequick/SINGARS. LRIP decision was approved Feb 02. DT completed 4th quarter FY02. LRIP II decision was approved Apr 03. OPEVAL completed Mar 04 and the final report was received Jul 04. Initial operational capability attained Jun 05. OSCAR was approved MSIII / Full Rate Production 16 Aug 04.

MODIFICATION TITLE: ENGINE LIFE MANAGEMENT PROGRAM(OSIP 002-04)MODELS OF SYSTEMS AFFECTED: TAV-8B, AV-8B Day, AV-8B Night, AV-8B Night/Radar TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION:

The AV-8B is a single engine aircraft with unique capabilities. The VSTOL environment is very unforgiving and allows no tolerance for engine problems. In the past, the Pegasus F402 has suffered from a less than optimal safety and reliability record demonstrating a 12.11 mishap (Class A) per 100,000 flight hours compared to a historical average rate of less than 2.0 over the rest of the Navy and Marine Corps in recent years. The Engine Life Management Program is a comprehensive program to increase safety of flight and operational readiness of the AV-8B F402-RR-408 Engine. Funding provided is to incorporate Engineering Change Proposals to increase safety of flight and operational readiness of the F-402-RR-408 Engine.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

The Engine Life Management Program was developed in October 2000. OSIP 02-04 supports the Harrier AV-8B Engine Life Management Program (ELMP) through APN funding. Power Plant changes are required throughout the aircraft service life as the aircraft ages and operationally revealed deficiencies are discovered, researched and solutions engineered. The Component Improvement Program (CIP), which is RDT&E funded, provides for the developing and demonstrating of the engineered solutions to these deficiencies and through the Engineering Change Proposal (ECP) process the Power Plant changes are initiated.

The power plant program procures the necessary kits, installation, non-recurring engineering, and technical data. The kits provided are for engine and propulsion related hardware to support the AV-8B F402 engine such as nozzle guide vanes (NGV), Pilot Lever Angle Units (PLAU), Fuel Control Units, Generator Turbine Starters (GTS) and accessory components, rotors and vanes for compressor sections, power turbines, combustion sections, exhaust ducts, engine monitor systems, and blade and vane coatings and foils to improve Foreign Object Damage (FOD) tolerance. The purpose of the program is to increase safety of flight and operational readiness of the AV-8B F402-RR-408 Engine. The ELMP is comprised of several Engineering Project Description investigations and a series of tri-annual Accelerated Simulated Mission Endurance Tests (ASMET). The Engineering Project Description (EPD) investigations and ASMET tests provide data points for existing Fleet problems and predict future engineering issues with the F402-RR-408.

The EPD investigations are conducted annually and an ASMET test began 4Q/04. Engineering Change Proposals resulting from Engineering Investigations and ASMET teardown results will be researched and their development formalized under the development program and incorporated into the F402-RR-408 via OSIP 02-04.

ECP-589 GTS Chip Detector - New chip detector for early detection of potential

ECP-951 GTS Exhaust Duct

ECP-3532 Bulkhead Cracking

ECP-3584 PPC 180

ECP-3641C1/PPC 196

ECP-3647 Improved Alignment of Bulkhead Sealing Rings

ECP-3654R1 PPC218

ECP-3690 Improved clipping of GTS leads - Revised to alleviate design deficiency

ECP-3705R1 Two Piece Bottom Heat Shield ECP- 3754 HP8 Pipe Clamps

ECP-3720 PPC 209

ECP-3733 PPC 213

ECP-3739 PPC 214

ECP-3743 PPC 215

ECP-3745 Combustion Chamber Improvement

ECP-3748 R1 PPC 216

ECP-3763 AYC 1249

ECP-3784 R2 PPC 204

ECP-3800 PPC 223, QEC 3

ECP-3800 PPC 216

ECP-3813 Oil Piping #3 Vane

ECP-3837R1 CuNin

ECP-3837 AYC 1284

ECP-3843 Sand Tolerant NGV - Revised NGV's to improve durability and increase

ECP-3848 HPC Casing Manifold Bridge Pipe

ECP-3852 LPC Stage 2 Vanes Hard Coating

ECP-3854 LPC3 Vane Sealing Strip

ECP-3855 LPCI Dampning Foil

ECP-3868 Improved GB Lubrication

ECP-3877 EVICS HMU Introduction of Restrictor - Introduces a repair for dithering (fluctuation) enhancing the reliability.

ECP-3881 FMU Shut Off Valve

ECP-3883 Introduction of IBI

ECP-3886 PDR Assembly component life damaging particles within the GTS

ECP-3887 IGV Position Transmitter with Rev. Drive Shaft

ECP-3889 Encapsulated Revision

ECP-3892 LPC Rotor 2 Blade with Revised Staggar Angle

ECP-3893 LPS 1, 2, & 3 Van Serialization

IPPC 227 FDS

The following TBD ECP's are revisions to improve durability and increase component life and or introduce new parts due to obsolescence

ECP-TBD GTS PWR Turbine/Compressor RGV/Compressor Turbine - Revision due to obsolescence, introduces a new part number.

ECP-TBD CCOC Thermocouples

ECP-TBD HPC Vane Modification

ECP-TBD LPT1 Liner

ECP-TBD Introduction of new HPT2 Blade

ECP-TBD Fine Oil Filter

ECP-TBD Control System Obsolescence

ECP-TBD EVICS IDEC POR Correction

ECP-TBD EVICS IDEC Diagnostic Improvements

ECP-TBD EVICS Obsolescence

ECP-TBD EVICS HMU Pilot Valve Improvements

ECP-TBD DECU Obsolescence

ECP-TBD Final Drive End-Similar to RAF design

ECP-TBD Hot nozzle redesign - cracking problem

ECP-TBD Exhaust Diffuser Redesign

ECP-TBD Thrust Push Improvements

ECP-TBD GTS Improvements

- ECP-TBD DECU/FMU WOW/ Improvements
- ECP-TBD LPC 1 Blade FOD Tolerance (LPB)
- ECP-TBD LPC 1 Blade Dovetail Coatings (LPB)
- ECP-TBD #2 Bearing Redesign
- ECP-TBD PLAU Shut Off Valve
- ECP-TBD Obsolescence, starter contactor
- ECP-TBD Obsolescence, protection unit
- ECP-TBD Obsolescence, starter motor
- ECP-TBD New break-in box with expanded capability
- ECP-TBD Power turbine rotor blade failure fix
- ECP-TBD Nozzle and spigot ring assy material change for improved reliability
- ECP-TBD New Starter Contactor - improved reliability
- ECP-TBD FMU Obsolescence ECP
- ECP-TBD 2 Transducer modification
- ECP-TBD DCU Redesign
- ECP-TBD EMS
- ECP-TBD HPT Blade Coating (Aluminide)
- ECP-TBD SET 2006-F402-01 (LPB Vanes)
- ECP-TBD LPCI Redesign

MODIFICATION TITLE: ALE-47(OSIP 025-04)

MODELS OF SYSTEMS AFFECTED: AV-8B Night, AV-8B Night/Radar TYPE MODIFICATION: Upgrade

DESCRIPTION / JUSTIFICATION:

ALE-47 is a form-fit enhanced functionality countermeasures dispenser system replacement for the obsolete ALE-39. This OSIP installs more reliable digital sequencers and dispenser magazines to improve aircraft readiness. When fully funded, the Warfare Management Computer (WMC) software will be modified to allow full ALE-47 functionality. Congressionally directed funding in the amount of \$4.810M was allocated in FY06 for ALE-47 in support of Global War on Terrorism (GWOT).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Improves aircraft readiness by replacing failure-prone analog sequencers and dispensers. Positions the AV-8B for future integration of advanced countermeasures expendables and programs.

MODIFICATION TITLE: OBSOLESCENCE REPLACEMENT(OSIP 006-06)

MODELS OF SYSTEMS AFFECTED: TAV-8B, AV-8B Day, AV-8B Night, AV-8B Night/Radar TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION:

This OSIP provides for maintaining the readiness of the AV-8B weapons system until its projected end of service, which is now expected to extend to 2025 or until replaced by STOVL JSF. This requires the airframe and integrated systems to exceed planned service life and will require both structural and obsolescence solutions. Funds will be utilized to manage and prepare, process and incorporate ECPs and implement changes to sustain and improve AV-8B weapons system readiness including safety, mission availability, structural integrity, and component (avionics/systems) reliability, maintainability, and obsolescence conditions as they arise. Due to fleet aircraft PAA inventory shortfalls, all depot level modification installations must be planned and programmed concurrent with Integrated Maintenance Plan (IMP) scheduled depot overhaul events to minimize aircraft out-of-service periods. The program intends to pursue resolution of ECP-282--Fuel Coupling-- will install new clamshell couplings with safety straps and modify the wing to fuselage fuel interconnect with threaded couplings; ECP-283-- Water Tank Pre-Filter--incorporates a filter to prevent contamination and engine water flow stoppage at the poppet drain valve; ECP-305-- Throttle and Stick Grip, Night Attack and TAV-8B-- replaces obsolete throttle and stick grips with current fleet configuration; ECP-309-- Fuel Bellows Conduit Leak--incorporates a safer double bellows design with increased gage material; ECP-CHPT-042 Center Tank Improvement--Replaces failing fuel tank structural frames 19, 20, 21 with a safer strengthened design; ECP-TBD Aft Structural Modification Improvement-- will install structural sensors/recorders in all aircraft-- to allow early detection and enable design resolution of Frame 43 bulkhead cracking in the area of the vertical tail and horizontal stabilizer to prevent catastrophic failure; ECP-TBD Electronic Altitude Airspeed Sensor (EAAS)--modifies EAAS unit to correct crew ejection safety deficiencies; ECP-TBD Bullet Fairing-- modify to prevent corrosion deterioration of fairing internal structure; ECP-TBD Wedge Frame-- will develop and implement a solution for acoustic resonance fatigue cracking of webs and panels near the auxiliary air doors; ECP-TBD-- Main Landing Gear (MLG) Hand Operating Strut-- redesign to forestall premature strut wear resulting in premature failure of MLG door mechanism; ECP-TBD Frame 16 Nozzle Ring-- provide solution of fatigue cracking in the engine nozzle ring raceway and bulkhead buttresses; ECP-TBD Air Loc Replacement-- modify and replace fasteners for improved retention to reduce FOD; ECP-TBD Frame 30, 31 and 32 Heatshield-- implement solution for heatshield fatigue cracking; ECP-TBD Blast Shields--implement solution for acoustic fatigue failures; ECP-TBD-- Forward ECS Air Ducts-- modify failing staying ties/fasteners which are causing FOD failures in the ECS system; ECP-TBD Display Computers-- modify or replace to address processor obsolescence; power panel, terminal, and circuit breaker reliability improvements; DC Contactor reliability improvements; GAU-12 25MM Gun system reliability improvements; TAV-8B 30KVA Generators-- replace obsolete 20KVA generators and generator control units with current fleet standard 30KVA systems. FY07 Title IX funding provided to procure additional 30KVA generators, due to the fact that the current 20KVA generators will be unsupported by late 2008 due to obsolescence. Without replacement of the obsolete 20KVA generator units, there will be fewer aircraft ready and available to operate in OIF and the Global War on Terrorism (GWOT). Aircraft will be grounded and current 30KVA spares inventory depleted, resulting in prolonged degraded fleet readiness unless 20KVA generators are replaced with 30KVAs. Failure to replace the obsolete 20KVA units will result in critical obsolescence operational impacts to Fleet Pilot Training Rates (PTR); ECP-TBD Ventral Fin (VFIN) Antenna--replace current deficient, unreliable antennas with an improved design; ECP-307 SAMSU Bleed Air Filtering reliability improvements; ECP-TBD Internozzle Fairing--redesign to prevent premature fatigue and acoustic cracking; ECP-TBD Power Management Indicator/ Engine Monitoring Unit (PMI/EMU)--redesign to eliminate obsolescence issues, and priority emergent safety and obsolescence issues as they arise. Congressionally directed funding in the amount of \$2.3M for V-Fin Antenna and \$.837M for 25MM Gunbolt Conversion was allocated in FY06 in support of Global War on Terrorism (GWOT).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

30KVA Generators to be procured for TAV-8Bs in FY06, as well as Engineering Change Order and ILS work to begin in FY06 for future ECP procurements and installations. Support equipment procurements will begin to support future installations to manage aircraft obsolescence. Other kit buys to begin in FY07 with depot level installations occurring beginning in FY08.

Exhibit P-3a

MODIFICATION TITLE: AV-8 ATTRITION RECOVERY DAY TO NIGHT (OSIP 015-07)

MODELS OF SYSTEMS AFFECTED: AV-8B Day Attack TYPE MODIFICATION: Upgrade

DESCRIPTION / JUSTIFICATION:

Currently obsolete Day Attack configured AV-8B Harrier aircraft will be restored to baseline configuration, and modified by the contractor as follows: eliminate Kapton wiring, incorporate current configuration -408 engine provisions, EVICS, 30KVA generators, incorporate enhanced nose wheel steering, incorporate -1760 and Litening pod wiring, power wire separation, RWR flex lines, common throttle and stick, night vision lighting/goggle provisions, dual AMPCD instrument panel, Wide Field of View Head-up display (WFOV HUD) and camera, DVMS/DSU and TAMMAC provisions, ARC-210 radios, current fleet released software (with compatible hardware), Frame-12 structural improvements, and compatibility changes necessary for systems integration to achieve a comparable Night Attack fleet baseline configuration. Rolls-Royce Pegasus -408B engines will be provided from current fleet inventory. All modification engineering integration and incorporation of components and systems mentioned above are to be performed by the contractor. All modification kit materials will be delivered fully installed in the completed flight accepted aircraft. FY07 Title IX funding provided to upgrade one Day Attack configured aircraft into a Night capable deployable asset to compensate for attrition and the resultant Primary Aircraft Authorized (PAA) shortfall. Failure to address inventory shortfalls will progressively aggravate the effect of PAA deficiencies on mission availability and combat relevance to support OIF and the Global War on Terrorism (GWOT), as well as operational safety. Current AV-8B inventory is insufficient to maintain PAA, provide for an effective Integrated Maintenance Plan (IMP), allow for crash damage repair and attrition, and accomplish timely reliability and capability upgrades through transition to JSF.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

Non-recurring engineering, engineering change order work, kit buys, and installs funded with FY07 supplemental to provide one upgraded aircraft in FY09, with subsequent aircraft mods beginning in FY08.

DESCRIPTION:

F-5 Aircraft. This line item funds modifications to convert a total of 32 F-5E Aircraft, procured from the Government of Switzerland, into a U.S. Navy approved configuration. It allows the U.S. Navy to maintain as close a standardized configuration with the U.S. Air Force as possible based on need. It also allows the U.S. Navy to initiate unique structural or avionics modifications. The overall goal of the modifications budgeted in FY2008 is to incorporate airframe modifications and selected U.S. Air Force approved Time-Compliance Technical Orders (TCTO's) to improve safety and reliability. This specific modifications budgeted and programmed are for the F-5 Structural Repair Program.

F-16 Aircraft. This line item funds the 14 F-16 Aircraft assigned to Naval Strike and Air Warfare Center (NSAWC), NAS Fallon, Nevada to support the Adversary role of Air Combat Missions training. These Aircraft, in their Adversary mission, improve the air combat maneuvering training received by the aircrews. These aircraft will serve as the U.S. Navy's only dis-similar CAT IV threat replication training asset in service for the foreseeable future. Falcon Up Airframe modifications are required to meet Key Performance Parameter (KPP) threshold of 3,000 hours service life. The F-16A aircraft most likely will not meet the KPP of 3,000 hours without Falcon Up. When coupled with Falcon Up, Falcon Star will extend the life of the F-16 approximately 4,200 Flight hours making the aircraft available for training to approximately FY2018.

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

MODIFICATION TITLE: STRUCTURAL FATIGUE/U (OSIP 029-81)

MODELS OF SYSTEMS AFFECTED: F-5 ADVERSARY SERIES TYPE MODIFICATION: SAFETY/RELIABILITY
VERTICAL STABILIZER
COCKPIT LONGERON
SWISS US CONVERSION

DESCRIPTION / JUSTIFICATION: The U.S. Navy F-5E/F Adversary aircraft inventory, and all applicable funds are for 32 aircraft. U.S. Air Force updated durability, damage, and tolerance analysis, structural inspection, full scale fatigue testing and counting accelerometer data has identified structural fatigue in wings and fuselage areas. The U.S. Navy plans to utilize these aircraft in the Adversary mission through FY2015, and beyond. However, aircraft will be grounded prior to FY2015, when maximum fatigue life is reached on major structural components, unless further analysis and replacements are procured and installed. The U.S. Navy plans to replace the current high time fuselage with low time Swiss F-5E Fuselages. Also, Wings, as well as, Horizontal Stabilizers, Vertical Stabilizers, Upper/Lower Cockpit Longerons, and Dorsal Longerons require replacement as they reach their fatigue life limit. Installation of a Structural Data Recorder is planned to ensure accurate recording of flight profile data which can provide up to a 25% increase in usage of these high costs fatigue critical components. Also, repair of other critical safety-of-flight systems such as, Flight Controls and Canopy Latching mechanisms will be accomplished under this program.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: All components and systems required for this program are already qualified, and/or approved for U.S. Navy use. No operational testing is envisioned under this program.

MODIFICATION TITLE: F-16 SLEP (OSIP 008-08)

MODELS OF SYSTEMS AFFECTED: F-16A AIRCRAFT TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: F-16 Aircraft assigned to Naval Strike and Air Warfare Center (NSAWC), NAS Fallon, Nevada to support the Adversary role of Air Combat Missions training. The F-16 Aircraft, in their Adversary mission, improve the air combat maneuvering training received by the aircrews. The aircraft airframe modifications required Key Performance Parameter of 3,000 flight hours. The U.S. Air Force documented cracking as early as 1,750 flight hours. The program will incorporate previously qualified modification kits at the U.S. Air Force oranic depot located at Hill Air Force Base, Utah.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: All components and systems required for this program are already qualified, and/or approved for U.S. Navy use. No operational testing is envisioned under this program.

This line item funds modifications to F/A-18 aircraft. The F/A-18 Naval Strike Fighter is a twin-engine, mid-wing, multi-mission tactical aircraft. The F/A-18 is employed in both Navy and Marine Corps squadrons. Commencing with the FY 1988 procurement, both the single seat and two-seat F/A-18's include a night attack capability. F/A-18 can be missionized through selected use of external equipment to accomplish specific fighter or attack missions. This commonality provides the Operational Commander more flexibility in employing his tactical aircraft in a dynamic scenario. The primary design mission for the F/A-18 is a strike fighter which includes the traditional fighter applications, such as fighter escort and fleet air defense, combined with the attack applications, such as interdiction and close air support. Since the same fighter and self defense capability is retained, the overall goal of the modifications budgeted in FY 2008 is to implement commonality/capability and structural safety and reliability improvements. The specific modifications budgeted and programmed are:

Exhibit P-3a	INDIVIDUAL MODIFICATION	
MODIFICATION TITLE:	CORRECTION OF DISCREPANCIES IDENTIFIED DURING PRELIMINARY EVALUATION, SUBSEQUENT FLIGHT TEST PROGRAMS AND FLEET OPERATIONS (OSIP 011-8)	
MODELS OF SYSTEM AFFECTED:	F/A-18 A/B/C/D	TYPE MODIFICATION: SAFETY /RELIABILITY/IMPROVEMENT
DESCRIPTION/JUSTIFICATION:	*Corrections to discrepancies found during testing and evaluation can sometimes be incorporated into production aircraft, effective with the physical configuration audit which establishes the product baseline of the aircraft. However, when this cannot be done due to time constraints, retrofit of the changes into already delivered aircraft requires funding through the Aircraft Modification Program. Additionally, deficiencies discovered during fleet operations must be corrected. The unacceptable alternative to retrofitting would be multiple configurations in the fleet, which will create maintenance and supply problems, and in many cases the mission capability of the aircraft would be adversely affected as well as reduced service life. Corrections to the following items/conditions are required:	
<p>External Stores EMI Protection (ECP 08751) Auto AC Bus Isolation (ECP 121R1) Battery Control Relay Unit (ECP 165R1) FY86 Block Upgrade (ECP 178R1C1) Center Fuselage Structural Mods (ECP 241R1) Dorsal Longeron (ECP 251) Dorsal Longeron (ECP 251R1) 470.5 Bulkhead (ECP 262)* Righthand AMAD Bay (ECP 267R1)* Y508 Former (ECP 276) AFT Engine Mount (ECP 305R1)* Y657.35 Engine Bay Door Former (ECP 306) Main Landing Gear (MLG) Planning Link (ECP 311)* MLG Trunnion Upgrade (ECP 319)* Y488 Bulkhead (ECP 320) Wing Fatigue Repair (ECP 353) MLG Shoulder Bolt (ECP 355) ASPJ System Improvement (ECP 364) Y470 Bulkhead Improvement (ECP 365) #1 Fuel Cell Floor (ECP 367) MLG Retract Actuator (ECP 375) Fretting on Formers & Spindles (ECP 391) Fuselage Skin, Y518 to Y534 (ECP 402)* Fuselage Skin, Y518 to Y534 (ECP 402R1)* Inlet Duct Skin at Y453 (ECP 417) Y470.5 Bulkhead MLG Trunnion (ECP 428) Speed Brake Trough (ECP 440) SUU-63 Wing Pylon Door Panel (ECP 488) Y470.5 Bulkhead Fatigue Change (ECP 492) Fuselage Skin at Y453 (ECP 498) Nacelle Skin Fatigue Improvements (ECP 501) LAU-115 Sparrow Mod (ECP 506)* ST-16 Failures (ECP 536)* Improvement of Inner Wing SPAR (ECP 544) Fuel Barrier Web (ECP 548) Wing Drag Longeron (ECP 550)* Y326.5 Plate Nut (ECP 561) Lower Center Keel Fire Hazard (ECP 562) Aileron/Trailing Edge Flap (ECP 574) Serocylinder Test Station (ECP-598) Flight Control Computer (ECP 595) Hydraulic Temp Gauges (ECP NI 879) Environment Control System Wiring (NI 742) Wing Fuel Dams (NI 796) MLG Trunnion Assembly (NI 824) Heat Exchanger (NI 827) Night Vision Display System (NVDS) (NI 830) Trailing Edge Flap (NI 839) Birdstrike Res Windshield (NI 843) Aileron Hinge Mod (NI 844) ANTI G VALVE (ECP XXX) Fuel Cell Floor Crack (ECP 973) AFT Fuselage Skin Crack (ECP592) Wing SPAR Crack (ECP XXX5) Forward Lower Keel Modification (ECP NI 931) Main Landing Gear (MLG) Axle (ECP 952) MLG Y488 Bulkhead (ECP XXX8) OBOGS (ECP XXX9) Crease Longeron (ECP 608) Heat Deterrent (ECP NI-1013-05) Nose Landing Gear/MLG/Control Valve Restriction (ECP XX12) Bay 3 Shelf Redesign (ECP XXX13) Bay 4 Shelf Redesign (ECP XXX14) Cockpit Pressurization Warning System (ECP 6217) Vertical Tail (ECP XXX-16) Canopy/Windscreen (ECP XXX-17) NLG/MLG Fatigue Improvements (ECP-XXX18) Inner Wing Conversions (ECP XXX19) NFDS Mods, C&D Conversion (ECP-JAX-F18-001) Interwing Conversion ECP XXX-21 Repeatable Release Holdback Bar (ECP 0147)</p>	<p>Provide for the application of external stores EMI Protection. This ECP includes Installation Costs ONLY Modifies the 50A Battery Charging Converter installation to automatically isolate the busses and reset the generators following a dual power outage Safety modification to the utility/emergency battery control circuits and adds a battery relay control unit. Prevents inadvertent battery discharge Increases the power handling capabilities of the four port antenna and the RF switch able filter in order to accommodate the RF power output requirements of the ASPJ System. Improves fatigue for the Dorsal Deck, Duct Skin rivets at Y442, ECS Inlet Casting, and Y419 Nacelle Former at Ramp Truss Attachment. Life extension modification to the Dorsal Longeron. Life extension modification to the Dorsal Longeron. Improves the fatigue life of the Y470.5 Bulkhead Outer Cap. Reliability and maintainability improvement to the interference between the motive flow tube and the hot fuel recirculation tube. Structural improvement of the Y508 Former by increasing the flange thickness and reinforcing the former with integral ribs. Safety modification improves the aft engine mount support to prevent cracking in the aft engine mount support fitting. Modifies the existing door former to prevent cracking. Safety modification to the existing planning link assembly. Belleville washers spring is replaced with nested external compression springs to provide additional over center locking force and stroke capability Safety modification reconfigures and strengthens the MLG trunnion assembly to prevent catastrophic failure upon landing or takeoff. Modifies the Y488 bulkhead to reduce structural stress and improve fatigue life. Modifies the fastener holes in the Wing Panel Forward Spar and the #4 Intermediate Wing Spar to increase fatigue life. Safety modification provides new shoulder bolts to correct a deficiency concerning elongation of the AFT bolt hole in the MLG Door Actuator Support Fitting. Improves reliability and maintainability by improving the cooling system and correcting transmit switchable filter qual test problems Modifies the Y470 bulkhead to reduce structural stress and improve fatigue life. Safety modification to improve the fuel cell floor strength to prevent cracking during catapult. Redesigns the MLG Retract Actuator Support Fitting and the Flange of Y470.5 Bulkhead where the fitting attaches and revises hydraulic timing to lengthen the Fatigue Life of the structures Safety modification to correct fretting observed on outboard formers of horizontal stabilizer. Modifies exterior fittings and adds and internal bathtub to strengthen the area, reduce structural stress, and improve fatigue life. Modifies exterior fittings and adds and internal bathtub to strengthen the area, reduce structural stress, and improve fatigue life. Addresses the retrofit design which will provide 12,000 SFH of life without cracks for the Inlet Duct Skin Corrects the deficiency in the MLG Trunnion support at Y470.5 bulkhead. Modifies the existing speed brake trough area to strengthen it and improve fatigue life Safety modification to the existing door panel to preclude loss of the door during flight Modifies the thickness of the existing bulkhead web to increase strength and improve fatigue life Safety modification to strengthen existing fasteners attaching the P/N 74A324350 former to Y453 bulkhead. Retrofits the Inlet Nacelle Skin to correct acoustic vibration related fatigue failures. Modifies the lower rail of the LAU-115 to strengthen the area of the AIM-7 Sparrow missile forward hanger interface and improve fatigue life. Modifies aircraft between Lot VI and Lot XVI or realize Full Life Airframe (6000 Fatigue Hours) Strengthens the existing inner wing spar to improve fatigue life Safety improvement to the existing fuel barrier web to prevent fuel leaks. Structural improvement to the Wing Drag Longeron due to tabs attached to the closeout webs were cracking during installation. Modifies the existing fasteners at the Y326.5 Bulkhead to improve fatigue life Safety improvement to the secondary pressure regulator bay to eliminate fire hazards. Provides a full-life improvement for aircraft degradation caused by cracked trailing edge flap and aileron hinges. Provides for the upgrade of aging Peculiar Support Equipment. Improvements in reliability and maintainability of Peculiar Support Equipment and modification to existing Support Equipment Improves safety-of-flight for the recovery from, and resistance to, out-of-control flight (OOCF) while also eliminating anomalies cited in FCC OFFP 91C*004. (NON-RECURRING COSTS ONLY) Improves the reliability of the hydraulic temperature gauges. Modifies wiring to the number 3 Relay Panel Assembly to connect the Left MainGear (LMG) Weight on Wheels (WOW) Relay ABD the Dump/RAM Dump Relay. Safety improvement modifies the inner wing inboard closure rib to prevent fuel leaks. Safety improvement to the MLG trunnion assembly to improve fatigue life and prevent failed landing gear mishaps. Provides for the removal of the nickel core and replaces with a more reliable stainless steel and nickel core. Adds capability to the lighting system to make the NVDS compatible. Safety modification to the trailing edge flap to correct flap departures while in flight. Safety modification to the windshield to protect against birdstrikes during flight Provide a full-life improvement for aircraft degradation caused by cracked trailing edge flap and aileron hinges. Improves pilot G-Load tolerance as part of the Navy Combat Edge (NCE) Anti-G Protection System. Safety modification to correct cracks at Y431, Y442, and Y453 in the fuel cavity floor deck centerline under tank two and three. Safety improvement to the fatigue life of the forward skin section of the chem.-milled panels. Strengthens the existing front inner wing SPAR to improve fatigue life Improves fatigue life of the Nose Landing Gear (NLG) Drag Brace. Incorporation of Full Life redesigned Main Landing Gear Axle Polygon, extending Axle's service life from current 8300 total landings to 13000 Restores Full Life to Y488 Bulkhead due to cracks around MLG Uplock hardware holes Retrofit LOX-equipped aircraft with Onboard Oxygen Generating System (OBOGS) solutions that are integrated with supplemental oxygen systems Restores the load path lost when the Crease Longeron cracks at FS 453. Modifies the aircraft to correct structural fatigue problems caused by degraded ECS Peri-Seals. Improve hydraulic fluid rate and reduce hydraulic line failures. Modify avionic shelves to withstand catapult fatigue loads Modify avionic shelves to withstand catapult fatigue loads Notify pilot when pressurization is lost in cockpit Modify vertical tail former and spars to prevent fatigue cracking. Modify canopy/windscreen frames and address delamination. Fatigue Improvements to include arresting gear planning link redesign Converting Lot 5-9 Wings to Lot 12 and above configuration. Removing the weapon systems from the aircraft, install Smoke Generation System and install Auxiliary Fuel Pumps for extended inverted flight. Converting Lot 10/11 Wings to Lot 12 and above configuration Modifies the RRHB to correct problems caused by degraded primary locking segments.</p>	
DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:	<p>Each change has been or will be tested prior to installation in the F/A-18. ECP 536 moved from OSIP 11-99 to OSIP 11-84 in FY02. No installs currently planned; possible in future. Unit cost variances due to: - Many ECP Kits were/are provided to the Navy at no additional costs (warranty kits).* - Some ECPs have numerous Technical Directives with different unit costs:</p>

Exhibit P-3a INDIVIDUAL MODIFICATION

MODIFICATION TITLE: F/A-18 GLOBAL POSITIONING SYSTEM (GPS) (OSIP 36-94)

MODELS OF SYSTEM AFFECTED: F/A-18A/B/C/D TYPE MODIFICATION: SAFETY / CAPABILITY IMPROVEMENT

DESCRIPTION/JUSTIFICATION:
 GPS (ORD# 401-88-95) is a space-based worldwide radio navigation aid that provides precise position, velocity, and time data under all-weather conditions twenty-four hours a day, and is proposed to replace land-based TACAN. Incorporation of the GPS in the F/A-18 aircraft provides the following: accurate navigation position and velocity, precision close air support, onboard sensor positioning, command and control guidance, search and rescue guidance, accurate all-weather air drops and accurate time standard. The F/A-18A (Lot VI through IX) GPS requirements will be satisfied by retrofitting the Embedded Global Positioning Inertial Navigation System. F/A-18A through D requirements will be satisfied by retrofitting the Miniature Airborne GPS Receiver (MAGR) in Lot X through Lot XVI and forward fitting Lot XVII through Lot XXI. This OSIP will also be used to perform non-recurring efforts to address parts obsolescence and to examine potential GPS-related capability upgrades associated with Network Centric Operations and interoperability requirements.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:
 The Embedded Global Positioning System (GPS) and Inertial Navigation System (INS) (EGI) program is a joint multi-user NDI acquisition which achieved Milestone III in FY94. Contract award was 4 March 1994, with Engineering Design Review completed in July 1994.
 The Embedded GPS/INS (EGI) system was supposed to be an NDI system, however, it has required a significant amount of development, which has resulted in schedule slips. As a result, F/A-18 has been adversely impacted in the following areas:
 1. F/A-18A/B/C/D can no longer meet the Congressional mandate to have GPS installed in all A/C by the year 2005.
 2. F/A-18 Mission Computer S/W testing to incorporate EGI functionality has experienced continual slips due to EGI hardware immaturity.
 3. The immaturity of the EGI has resulted in a delay of the Validation and Verification (Val/Ver) of the EGI A-Kits in all versions of the F/A-18.
 4. As a result of the above impacts, a decision was made to install the Miniature Airborne GPS Receiver (MAGR) in F/A-18C/D Lot X through Lot XVII A/C. MAGR is a lower risk option and has been installed as a forward fit in Lot XVII and above A/C. Since EGI performance has not completed testing, MAGR is the only option that ensures the most rapid, low risk retrofit. This plan results in the least impact to further F/A-18C/D modifications. Furthermore, a decision was also made to continue with the development of the EGI in order to meet GPS requirements for the F/A-18A/B (Lot IX and below) . F/A-18 A/B's cannot be retrofitted with a MAGR integration due to space restrictions and airframe differences. In summary, F/A-18 has had to develop new integration plans for GPS that now include the integration of both MAGR and EGI. EGI A-Kits were put on order using FY96/97/98 funding based on an NDI assumption, however due to above mentioned reasons, the EGI A-Kits now need to be converted to MAGR A-Kits with no pricing impact. The procurement of MAGR B-Kits to catch up with converted MAGR A-Kits has resulted in F/A-18 not meeting the full funding requirement while protecting the risk and schedule of this high visibility program. PMA-209 (OSIP 71-88) is funding the procurement of a portion of the installation equipment reflected in the total column below which explains the difference between the installation kits and equipment. Increase in NRE funding in FY01 thru 03 due to requirements for increased testing and integration for "B" kits (installation equipment).

FINANCIAL PLAN (TOA, \$ in Millions):

- Notes:
 1. Update required based on FY02 magr procurement \$2,548K from OSIP 19-01.
 2. Funds in house will be realign in FY06 to support installation of equipment.
 3. 15 "A" kits procured in FY91 to 98 were not installed due to technical issue addressed above.
 4. Included in Prior Year procurement was 28 MAGR 2K's which are a Form, Fit, Function replacement for the original MAGR Kit. The MAGR 2K included updates to internal components to address parts obsolescence issues.

Exhibit P-3a	INDIVIDUAL MODIFICATION																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																									
MODIFICATION TITLE: POSITIVE IDENTIFICATION SYSTEM (OSIP 12-96)																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																										
MODELS OF SYSTEM AFFECTED: F/A-18C/D	TYPE MODIFICATION: CAPABILITY IMPROVEMENT																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																									
DESCRIPTION/JUSTIFICATION: The Positive Identification System (PIDS) allows the F/A-18 to positively identify another aircraft. The requirement for positive identification of enemy and friendly aircraft arose from Desert Storm lessons learned and is a CNO high priority issue. Although Lot applicability is back to Lot X, FYDP funding represents an affordable plan. ORD # 446-88-96. The Communication, Navigation and Surveillance/Air Traffic Management (CNS/ATM) is a satellite-based technology designed to effectively and efficiently control and manage air traffic. CNS/ATM requires the PIDS AN/APX-111 to be upgraded to the -20 Configuration. Military aircraft must conform with CNS/ATM to prevent violation of civil air traffic clearances and ensure safe separation of military and civil air traffic. One kit is required per aircraft / AN/APX-111.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																										
DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: Forward fit of the PIDS (CIT) for the F/A-18 began in FY 1995 with the last block of Lot 19 aircraft. Retrofit kit procurement started in FY1996. Val/Ver kits were installed in FY98. Kit installation began in FY99. PIDS (CIT) had a successful OPEVAL with Software Configuration Set (SCS) 13C.

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: **DIGITAL COMMUNICATIONS SYSTEM (DCS) (OSIP 10-99)**

MODELS OF SYSTEM AFFECTED: **F/A-18 C/D (Lots 10-21)** TYPE MODIFICATION: **CAPABILITY IMPROVEMENT**

DESCRIPTION/JUSTIFICATION:
 The Digital Communications System (DCS) consists of an upgraded AN/ARC-210 Receiver Transmitter (RT) [with embedded digital message transfer capability and embedded Communications Security (COMSEC)] installed in the F/A-18 and integrated with the F/A-18 weapons system [mission computer, controls & displays, and communication subsystem]. The DCS utilizes preformatted messages to communicate with standard USMC, USA, and USAF digital communications devices to facilitate Close Air Support (CAS), Deep Air Strike (DAS), and Tactical Air Control (TAC) missions. DCS reduces voice communications requirements which tend to be slow, inaccurate, and susceptible to Meaconing, Interference, Jamming, and Intrusion (MIJI). DCS will enhance mission effectiveness by decreasing pilot workload which allows the pilot more time to counter increased threat capabilities. ORD# 486-88-98. This OSIP will also be used to address parts obsolescence issues and to perform non-recurring work associated with Network Centric operations and Interoperability requirements.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:
 The AN/ARC-210 RT is being upgraded to a DCS RT. The Initial Engineering Developmental Model (EDM) was delivered (using RDT&E,N resources) in FY1998 as scheduled. The F/A-18C/D requirements will be satisfied by retrofitting DCS into Lot X through Lot XXI. Functionality was provided in the Operational Flight Program (OFP) 15C fleet release in FY2000. Initial procurement of installation kits was awarded May 1999. F/A-18C/D Lots X and XI require an ACI and DCS radio. DCS radios are purchased through OSIP 04-94 (PMA-209). "B" Kits (Radios) purchased in FY02 and FY03 through this OSIP are to balance total inventory of radios to installation kits. OSIP 04-94 is purchasing 20 Install A kits in FY05 and 40 Install A kits in FY06. Additional ACI requirements for increased install provisions are currently funded under OSIP 12-99.

FINANCIAL PLAN (TOA, \$ in Millions):

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: **F/A-18 AIRCRAFT STRUCTURAL LIFE MANAGEMENT PLAN (SLMP) (OSIP 11-99) CBR+**

MODELS OF SYSTEM AFFECTED: **F/A-18A/B/C/D** TYPE MODIFICATION: **SAFETY / LIFE EXTENSION**

DESCRIPTION/JUSTIFICATION:

Incorporation of structural enhancements and changes is required to attain F/A-18 service life and maintain sufficient aircraft inventory to meet fleet operational requirements through FY 2023. Structural enhancements and changes include resolution of discrepancies identified as a result of Structural Test (ST-16) and in-service experience. These enhancements and changes include: modifications to allow the entire airframe to extend flight hours; modifications to ensure structures currently limited to 78% of design life can achieve 100% life; modifications to ensure landing gear, catapult and attachment components can extend total landings. The unacceptable alternative to retrofiting would be the failure to reach full fatigue life for these aircraft and to not correct the structural defects discovered on fatigue test articles. In many cases, the mission capability of the aircraft would be adversely affected in addition to its reduced service life. As a result, aircraft may be prematurely removed from useful service. Center Barrel Replacement Plus (CBR+) is applicable to F/A-18A/Bs as well as to F/A-18C/Ds. ECP 904 Part 1 is the basic center barrel kit. Part 2 is required to extend Wing Root FLE and is not required for all aircraft. ECP 904 Part 3 is required to extend CAT & TRAPS and does not have to be installed concurrently with Part I and II. Part 4 is to extend flight hours associated with flight control surfaces, wings, vertical tails and the forward/aft fuselage.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Currently all Lot VI through XVII aircraft have 78% life limits without the SLMP modifications to bring them to 100% airframe life. MDA and NGC developed ECP536 retrofit repair to modify these aircraft so they could restore the airframe to full life. ECP 536 was approved and Validation was completed May 2001. NADEP North Island developed ECP904NI (CBR+) which was approved on 27 April 2000, ECP 904NI supersedes ECP 536. Validation started October 2000 and was completed in August 2001. Verification started August 2001 and was completed June 2002. ECP 536 moved from this OSIP to OSIP 11-84 in FY02.

- Notes:
- Totals may not add due to rounding.
 - * ECP536 VAL/VER Kit provided under warranty.
 - ** Prior Year VAL/VER Kits: (1) provided under warranty by Boeing and (1) provided by NAVICP on hand assets.
 - *** Installations slipped one year due to FY01 funding reductions.
 - "Installation Kit" Pricing is Quantity Sensitive. FMS procurements in some years affects unit price.
 - The reduced cost for ECP 904 PT2 beginning in FY-06 is due to a change from procuring new nacelle ramps to installing AFC-271 nacelle mods on WRFL.
 - FY06 ECP 904 Part 2 unit cost reflects remanufactured kits vice procuring new.
 - FY06 ECP 904 Part 3 is an "O" Level Install, does not have to be installed concurrently with Part I and II.

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: **MULTI-FUNCTIONAL INFORMATION DISTRIBUTION SYSTEM (MIDS) (12-99)**

MODELS OF SYSTEM AFFECTED: **F/A-18C/D/E/F and EA-18G** TYPE MODIFICATION: **CAPABILITY IMPROVEMENT**

DESCRIPTION/JUSTIFICATION:

The system is Tactical Data Link Communications to provide a secure communications and navigation system. Multifunctional Information Distribution System Low Volume Terminal (MIDS-LVT) is a Pre-planned Product Improvement (P3I) to the Joint Tactical Information System (JTIDS) and will be installed in USN/USMC F/A-18 aircraft as the primary U.S. platform, since the aircraft cannot accommodate the larger JTIDS Class 2 Terminals due to size and weight constraints. MIDS LVT is an International Cooperative Program (ICP) development with France, Germany, Italy, and Spain. A PMOU and Supplement 1 is in effect. The system will be interoperable with JTIDS Class 2 Terminals utilized by NATO allies as well as the other Services. F/A-18 will be interoperable with all Link 16 equipped platforms in U.S. and Allied Nations. This OSIP will also be used to perform efforts to address parts obsolescence and to examine potential MIDS-related capability upgrades associated with Network Centric Operations and interoperability requirements. ORD # 337-06-93. The MIDS Joint Tactical Radio System (MIDS JTRS) is an ECP upgrade to the MIDS-LVT developed under ORD#642-61-04. MIDS JTRS offers the functionality of Link 16, TACAN, and digital voice in a software-controlled architecture (SCA) JTRS-compliant format, and provides the option of future expandability to host the Airborne Networking Waveform (ANW). MIDS JTRS will be retrofit in Lots 26-31 F/A-18E/F and EA-18G aircraft.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

This OSIP was originally planned for incorporation of MIDS into F/A-18C/D (Lots 12-21) and F/A-18E/F (Lots 22-31). A MIDS installation kit Critical Design Review (CDR) was held at Boeing in September 1996. MIDS Terminal initial Engineering and Manufacturing Development (E&MD) delivery for F/A-18 occurred in February 1998. Installation into the first three (3) EMD aircraft began in March 1998 and ended in September 1998. In May 1999, Boeing was awarded the ECP contracts required to provision the F/A-18E/F for the MIDS LVT while still in production. These provisions include: an Interference Blanking Unit (IBU); an Amplifier Control Intercommunication Unit (ACI); a MIDS Compatible CIT upgrade; and a MIDS Compatible Transponder upgrade. This list of equipment was also required to be retrofit into F/A-18C/D and is included as the "Avionics Upgrade" in the table below. These provisions are required by other F/A-18 programs and can be installed independently of MIDS LVT. OPEVAL was completed in June 2003, with a recommendation of operationally effective and operationally not suitable. A Verification Correction of Deficiencies (VCD) was completed on 15 August 2003. The VCD report delivered on 4 September 2003 recommended full fleet release. Full Rate Production approval was granted on 25 September 2003. Integration testing of MIDS JTRS capabilities will begin in FY07. FY07 is a LRIP buy per the approved acquisition strategy and will enable Initial Operational Capability in FY09.

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: **USMC F/A-18 UPGRADE ECP-583 (OSIP 21-00)**
 MODELS OF SYSTEM AFFECTED: **F/A-18A/B/C/D** TYPE MODIFICATION: **AVIONICS UPGRADE**

DESCRIPTION/JUSTIFICATION:
 This OSIP upgrades USMC F/A-18A/B/C/Ds avionics including both hardware and software capabilities. This requirement is critical to meet the Marine Corps requirements for the TACAIR Integration Plan. The Avionics Upgrade includes avionics subsystems already incorporated or being incorporated into USMC and/or FMS F/A-18 aircraft. The Basic ECP 583 incorporates the following subsystems: AN/ARC-210(V) with HAVEQUICK II and SINGGARS; Digital Communication Systems (DCS) Receiver/Transmitter (RT-1824(C)); Combined Interrogator/Transponder AN/APX-111 (V); Night Vision Display System (NVDS); Mission Computer CP-2360 (XN-8); Radar (AN/APG-73); Stores Management Set (SMS, AN/AYQ-9); AMRAAM Capability (radar mod, launchers, weapons pylons and control stick); Digital Display Indicator (DDI) Upgrade; Mission Data Loader (AN/ASQ-215); Targeting FLIR provisions (AAS-38B). ECP583R1 adds a digital wingtip modification, allowing use of the AIM-9X air-to-air missile. ECP 583R2 adds the following capabilities: MIDS(LVT); Color Displays; JHMCS; ALE-47; TAMMAC; and AMU. ECP 583R3 was cancelled. ECP583R4 will incorporate the NACES seat for utilization with the JHMCS system. This OSIP also provided limited integration of the LITENING Enhanced Range FLIR on 24 USMC F/A-18Ds. This allowed the Marine Corps to utilize existing LITENING pods, currently in the AV-8B inventory, on USMC F/A-18Ds to provide the Air Ground Task Force capability and flexibility in the execution of operations in the combat spectrum.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:
 While the number of aircraft to be retrofit in the program of record has not changed, the Marine Corps will now retrofit some early lot F/A-18C/Ds vice only F/A-18ABs due to greater remaining life on those aircraft. ECP 583 was approved 25 March 1999. ECP 583R1 was approved in August 2001. All the equipment being incorporated in this ECP has completed development. A New Start notification was sent to the Congress in FY 2003 to initiate the Litening integration and procurement of the FY 2004 Installation Kits. Due to lower than expected pricing, 24 aircraft are able to be modified with the originally identified funding.

FINANCIAL PLAN (TOA, \$ in Millions):

- Notes:
- Totals may not add due to rounding
 - Asterisk indicates amount less than \$50K
 - 34 "Installation Kits" were purchased with NGRE Funds to include: 4 Val/Vers - FY98; 20 "A" Kits - FY99; and 10 "A" Kits - FY00. The cost of these kits are not displayed in this OSIP.
 - The "Installation" unit costs for FY 2002 through FY 2005 are skewed by Congressional adds. The 6 installs in FY2004 are funded with FY 2002 Congressional add funding and the 3 installs in FY 2005 are funded with FY 2003 Congressional add funding.
 - The Installation Kit procurement of ECP583R2 is for Validation/Verification.
 - The additional ECP583R1 kits are being procured to retrofit Navy Reserve aircraft already modified to an ECP 583 configuration under an OSIP that is no longer active.

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: **F/A-18 JOINT HELMET-MOUNTED CUEING SYSTEM (JHMCS) (OSIP 24-00)**

MODELS OF SYSTEM AFFECTED: **F/A-18C/D/E/F** TYPE MODIFICATION: **CAPABILITY IMPROVEMENT**

DESCRIPTION/JUSTIFICATION:

The Joint Helmet-Mounted Cueing System (JHMCS) is a multi-service system that provides United States Air Force (USAF), United States Navy (USN), and United States Marine Corps (USMC) aircraft the capability to cue and verify on-board weapons and weapons sensors to a specific azimuth/elevation determined by the pilot's head position and to confirm sensor line-of-sight. The intent is to reduce tasks required of aircrews, verify seeker/sensor position, and enhance weapons employment opportunities. In the air-to-air role, the aircrew will be able to cue and verify cueing of off-boresight weapon sensors and weapons (current and future short-range air-to-air missiles) to exploit the full weapons envelopes in the dynamic Within Visual Range (WVR) arena. In the air-to-ground role, this system will enhance lethality and survivability by reducing cockpit "heads down" and target acquisition time. For the strike, strike escort, and force application missions, the JHMCS possesses potential to enhance the flexibility of cueing weapons and sensors in the stressful air-to-ground tactical environment. The JHMCS incorporates an ejection-compatible helmet-mounted display system, with capability to cue and verify cueing of high off-axis sensors and weapons, on USAF and USN single seat and two seat fighter aircraft. The JHMCS includes a flight helmet with display optics, image source, display processor/video hardware and software to drive the display, uplook reticle, magnetic helmet tracker hardware and software, interfaces to the aircraft computers, weapons and sensor hardware, with software to integrate the JHMCS functions with other onboard systems. The JHMCS communicates with airborne sensors (FLIR, Radar) through the aircraft avionics MUX Bus. It communicates with weapons through the armament MUX Bus via the Stores Management System. This system will provide aircraft equipped with the Joint Helmet Mounted Cueing System (JHMCS) the ability to cue and display weapons and sensors at night through the initial fielding of a narrow field of view Night Vision Device that integrates the JHMCS cueing and display symbology. The capability will be upgraded to a wide field of view system when available. The system will be compatible with the current JHMCS helmet and will use the power and data provided by the JHMCS Universal Connector on the helmet. The System includes a high resolution image intensifier assembly, a camera to record the pilot's visual scene and display assembly that combines the JHMCS symbology and the scene viewed through the NVD. It also has an objective lens with a leaky green filter that enables the fixed wing pilot to view the head-up display while wearing the system. The system is fully adjustable by the operator and is detachable from the helmet.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

F/A-18E/F JHMCS completed Developmental Testing in August 2001. Operational Test (OPEVAL) was completed in April 2002. F/A-18E/F retrofit kit procurement began in FY 2004 and installed in FY 2005 starting with Lot 23 aircraft. JHMCS procurement for F/A-18C/D was approved a milestone decision in January 2004. AFT Seat development completes in FY06. The first F/A-18C/D JHMCS retrofit kits were procured in FY 2005 and installed in FY 2006.

INDIVIDUAL MODIFICATION

Exhibit P-3a

MODIFICATION TITLE: ADVANCED TARGETING FORWARD LOOKING INFRARED (ATFLIR) (OSIP 12-01)

MODELS OF SYSTEM AFFECTED: F/A-18A+/C/D/E/F TYPE MODIFICATION: CAPABILITY IMPROVEMENTS

DESCRIPTION/JUSTIFICATION:

The Advanced Targeting Forward Looking Infrared (ATFLIR) (ORD# 605-78-02) will provide the F/A-18A+/C/D with a significantly enhanced capability to detect, track and attack air and ground targets. New laser guided and GPS standoff weapon systems and higher altitude attack profiles require improved performance over the current AAS-38/46 Targeting FLIR. The ATFLIR currently utilizes the 3rd generation of FLIR technology. The ATFLIR is designed to provide a quantum leap in operational effectiveness to fully support the standoff precision strike mission. Improved reliability and maintainability technology will increase operational availability while reducing life cycle costs. This OSIP is also being used to perform efforts to address parts obsolescence and to examine and incorporate potential ATFLIR-related capability upgrades associated with Network Centric Operations, interoperability requirements, and upgraded targeting .

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

ATFLIR development began in FY1997. OPEVAL testing was completed in June 2003 and the OPEVAL report was issued 4 September 2003. Full Rate Production approval was given in October 2003. NAVFLIR capability was removed from the system in December 2003.

FINANCIAL PLAN (TOA, \$ in Millions):

Notes:

1. Totals may not add due to rounding
2. Asterisk indicates amount less than \$50K
3. 8 "A Kits" used for Validation/Verification will not be installed on aircraft.
4. The "Installation Kit" is required to allow Advanced NAVFLIR functionality on cockpit displays. This ECP is required for F/A-18A+ and all F/A-18C/Ds.

Exhibit P-3a

INDIVIDUAL MODIFICATION

MODIFICATION TITLE: E/F 2000 HR CORRECTION OF DISCREPANCIES (OSIP 019-01)MODELS OF SYSTEM AFFECTED: F/A-18E/FTYPE MODIFICATION: SAFETY / RELIABILITY /IMPROVEMENT

DESCRIPTION/JUSTIFICATION:

Corrections to Discrepancies up to 2000 Flight Hours identified during development testing and fleet operations can sometimes be incorporated into production aircraft, effective with the physical configuration audit which establishes the product baseline of the aircraft. However, when this cannot be done due to time constraints, retrofit of the changes into already delivered aircraft requires funding through the Aircraft Modification Program. Corrections to the following items/conditions are required to meet the F/A-18 E/F transition plan and achieve planned life limits. These corrections modify, improve and restore aircraft structural safety and reliability to designed full life limits. This OSIP also is used to correct safety related issues.

TEF, AIL, & AIL Shroud Hinges, (ECP-6035 PT1)

Drag Angle, (ECP-6136)

Idle Hinge, NLG R/H Forward Door (ECP-6032)

Strut Door Attach Former @ Y520, (ECP-6057)

Drive Hinge, NLG R/H Forward Door, (ECP-6137)

Y541 Fitting Repair Crack, (ECP-6111)

ECS Primary Heat Exchanger, (ECP-6078)

LEX Diverter Apex Fitting @ Y383, (ECP-6041)

MLG Sidebrace Pin, (ECP-6099)

Heat Exchanger Cover (Door 55) Hole Wear, (ECP-6086)

Outer Wing Substructure, Hinge kit & Wing Torque Box kit, (ECP-6035 PT2)

Ecology Tank Flange Changes, (ECP-6100)

Center Keel Intercoaster @ Y627, (ECP-6092)

Fuel Floor Support Angle @ Y470, (ECP-6128)

Inlet Duct Stiffener, (ECP-6094)

Keel Access Cover @ Y631-Y645, (ECP-6118)

Upper Keel Web Stringer @ Y659, (ECP-6067)

Keel Web Fittings Alt of Y472, (ECP-6127)

Visual Identification System (ECP-6052)

AOA/PITOT Probe Circuitry Change & Boarding Ladder/Canopy Switch, (ECP-6165)

Keel Web, (ECP-XXX7)

ECS/ APU Bay Sealing Issues (ECP-6231)

Replace hinges on trailing edge flap, aileron and aileron shroud with redesigned hinges to prevent potential departure of flight control surfaces in flight.

Install redesigned wing drag angle to correct acoustic vibration related fatigue failures.

Retrofit redesigned hinge to restore component to its original specification.

Replace with redesigned hinge and clevis, and install bushing into Y520 former to restore component to its original specification.

Incorporate redesigned drive hinge to prevent potential departure of component in flight.

Splice redesigned lower appendage area into Y541 former to restore component to original specification.

Replace noncompliant heat exchanger with redesigned full life component and new ECS duct.

Retrofit with redesigned apex fitting to restore component to its original specification.

Fit MLG with redesigned pin to prevent possible collapse of MLG during arrestments.

Retrofit fasteners with steel bushings to prevent distribution of stress into fuselage components.

Remove noncompliant TEF and aileron hinges on wing torque box and replace with full life hinges.

Incorporate redesigned ecology tank and modify mount on the door to prevent tank separation.

Replace component to restore aircraft to original structural integrity.

Add titanium bathtub fittings and replace fuel floor to increase fuel floor land area.

Remove & replace with new design Inlet Duct Stiffener to correct design deficiency.

Replace Keel Web with redesigned component to conform to original aircraft specification.

Install doublers to restore component to its original service life.

Install doublers to restore component to its original service life.

Provide Pattern Strobe Light System and Circuit Logic Change cues to distinguish E/F from C/D at night.

Retrofit redesigned AOA Probe Circuitry to prevent potential safety hazard and relocation of boarding ladder switch to preclude inadvertent actuation of the canopy switch, resulting in the possible closing of aircraft canopy on personnel.

Replace Keel Web with redesigned component to conform to original aircraft specification.

To prevent the PAO/Air Heat Exchanger Coolant from leaking into the ECS pack bay.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Each change has been or will be tested prior to installation in the F/A-18.

Some ECPs are "O" Level Installs.

 - Some ECPs were procured under warranty with Boeing, we only pay for installs.

Exhibit P-3a		INDIVIDUAL MODIFICATION																					
MODIFICATION TITLE:		F/A-18C/D DIGITAL WINGTIP MOD FOR AIM-9X COMPATIBILITY (OSIP 05-02)																					
MODELS OF SYSTEM AFFECTED:		F/A-18C/D								TYPE MODIFICATION: CAPABILITY UPGRADE													
DESCRIPTION/JUSTIFICATION:		<p>The AIM-9X Joint Operation Document (JORD), ORD# USN-CAF (USAF 001-93)-IIA, requires a highly expanded off-boresight targeting capability that presently cannot be achieved with the current AIM-9M analog interface signal set. The JORD also requires the missile to communicate with the aircraft through a digital interface. The F/A-18 currently has a tailored MIL-STD-1760 interface on stations 2 through 8. Modifications to the outer wing panel and LAU-7 launcher provide full digital capability to the wingtip and can support full AIM-9X capability. The current launcher support equipment (AWM-100) must also be modified to support/test this digital wingtip capability. AWM-100 are "O" level installations.</p>																					
DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:		<p>The AIM-9X missile is on contract for LRIP 1, 2 and 3 deliveries, with the LRIP 1 delivery complete. Operational test has been completed and the AIM-9X program Milestone III (FRP) was approved in 2004.</p>

MODIFICATION TITLE:		<u>C/D TRAINING SYSTEM (OSIP 06-02)</u>																				
MODELS OF SYSTEM AFFECTED:		<u>F/A-18C/D</u>										TYPE MODIFICATION: <u>TRAINERS UPGRADE</u>										
DESCRIPTION/JUSTIFICATION:																						
F/A-18C/D training funds will be used to meet current Fleet Readiness Squadron (FRS) requirements by purchasing new components and software to prevent obsolescence of the various trainers as F/A-18C/D aircraft are modified for capability enhancement and service life extension. Funding will also be used to update courseware and computer based training (CBT) as new capabilities are introduced to the fleet, and will enable the fleet to institute an aggressive post-FRS training environment to bring F/A-18C/D trainers into High Level Architecture (HLA) compliance.

MLG Proximity Switches & Sidebrace Down lock Mechanism, (ECP-6076)

Fuel System Ground Pressurization Tube Water Entrapment, (ECP-6190)

Wing Modification for Transonic Flying Qualities Improvement, (ECP-6191)

Radar Bay Vent Valve Fail - MSP 862, (ECP-6198)

Y679 Former Boot Strap Interface Fillet Seal Missing, (ECP-6206)

ECS Cooling Duct Grounding Strap, (ECP-6209)

ARS Lighting, (ECP-XXX23)

NVG Friendly NAV Lighting, (ECP-XXX24)

Bay 4L Equipment Bay Life Limits, (ECP-6221)

Y591 Bulkhead Missing Fasteners at Keel Longeron, (ECP-6262)

Fatigue Testing - Teardown, (ECP-XXX27)

Wing-Aft Shear Tie Bushing Migration, (ECP-6241)

HS1 Reservoir Chafe, (ECP-XXX29)

TEF Clip Fatigue Prevention, (ECP-6213)

Boarding Ladder Sensors Improvement, (ECP-XXX30)

Brake Piston Assy Redesign, (ECP-XXX31)

Inlet Ice Detector Hardware Redesign, (ECP-XXX32)

Inadequate Clearance Between APU SCV and Structure, (ECP-6211)

Wing - Fuel Probe Corrosion Protection, (ECP-6219)

Common Preamps, (ECP-6034)

FT76 Forward Windshield Bolt Life Limit, (ECP-6258)

Hydraulics Components Improvement, (ECP-XXX33)

480 Gallon External Fuel Tank Valve Replacement, (ECP-XXX34)

MLG Door Departure and Flight Redesign (Final Fix), (ECP-XXX35)

ECP-XXX36/ Fire Bottle Bay Over-Temperature, (ECP-XXX36)

FT77 Wing Pylon Changes, (ECP-6282)

ECS COMPONENTS INCREASE VIBRATION LOAD ISSUES, (ECP-XXX38)

ECP-XXX39 / AFT Engine Mount Attach Fitting, (ECP-XXX39)

ECP-XXX40 / V38 OFP UPGRADES, (ECP-XXX40)

Modifies current exhaust ducts in order to reduce skin and structural temperatures caused by the ECS exhaust plume

Strengthens ECS cooling fan to prevent and contain fan failures

Replace existing FCC processor with upgraded higher order processors

Improved bushing retention for MLG Door hinge attach points

Repair former by adding a doubler to bring it back to original specification

Replacing bearing retention nut with an improved retention nut

Incorporation of improved retention mechanism in position sensor

Strengthen the Centerline Structure to meet 2000 catapult requirement

Modify the Aft Fan with an Improved Shut-Off Valve

Drill hole in door to allow escape of moisture accumulation in order to prevent corrosion of the antenna

Modifies LEX structure to prevent cracks induced from aerodynamic loads

Redesign clevis to eliminate cracking imparted during gear cycling

Introduces strengthened design to prevent cracking

Redesign the existing keel beam lower cap at the arresting hook uplatch mechanism. Increase the thickness of the lower flange and web in this local area to handle the inertia loads from the arresting hook while its latched in the stowed position Modifies Keel To Prevent Future Cracking

Modifies bulkhead to prevent cracking discovered during FT50 testing

Redesigned Upper Wing Skin Splice Plate to address failures observed during fatigue testing

Replace Door 49 for holes found elongated beyond spec.

Improved fasteners to prevent deformation introduced by flight loads

Redesign existing planing link attach fittings

Redesign and strengthen door actuator

Upgrade the Fuel Wash Filter to address a design deficiency which allows bypass of FO to the LDFS. Create a simpler and lower cost design for production and retrofit. Retrofit is required for A/C in the fleet with Tube Assemblies produced before sealant was applied to prevent filter bypass

Modify ECS ejector to prevent cracks from being induced

Improves Uplock ability to overcome increased loads due to MLG Door icing

Provides a warning system to identify a possible insidious cabin pressure loss that could result in crew hypoxia and possible A/C loss

L/H MLG Strut Doors departed in flight causing damage to adjacent doors and structure Forward hinges on failed doors show evidence of fatigue failures Unanticipated loads

Entrapment due to stores carriage Centerline 480 gal fuel tank.

Mission Computer BIT performance upgrades & enhancements for aircraft with Higher Order Language (HOL)

Mission Computer BIT performance upgrades & enhancements for aircraft without Higher Order Language (HOL)

Modify down lock actuator assembly, jury link; replace lock plate & proximity switches

Change manual drain valve to automatic drain valve to ensure that no water is trapped in the fuel system.

Modify the wing and flight control surfaces to improve the flying qualities of the aircraft when flying above the speed of sound.

To eliminate the Radar Bay Vent Valve failures (MSP 862 code). The condition was traced to an excessive voltage drop to the valve, a result of the Radar Bay Vent Valve circuit change which incorporated Forward Avionics Fan Delay Logic.

Retrofit will consist of applying Fillet seal/brush coating to entire edge of lower leg of Support that interfaces with "Y679" Former

Add a grounding strap to prevent accidental static discharge to an aircraft maintainer

Add lighting to the ARS pod to improve the visibility of the tanking aircraft during night time refueling operations

Modify cockpit lighting to be more friendly with night vision goggles (NVG)

Retrofit Will Eddy Current Inspect and Install 1st Oversize Interface Fit Fasteners (14 Fasteners at Y326 & 5 Fasteners at Y357). Final Retrofit Redesign will Install New J-Beam, New Clips, Oversize Fasteners, New Post Support and New Dagger Pins.

Cracks were found on the Y591 Bulkhead during the FT-50 Teardown. The cracks were located at the keel longeron attachment. Root cause investigation identified that 6 fasteners were missing between the horizontal leg of the longeron and the bulkhead for the FT-50 configuration. Current build aircraft are missing 4 fasteners. Test Correlation analysis indicates the

Correct cracks in various other structural components found during teardown of various fatigue test articles

Bushings migration will reduce the contact bearing area on the spars reducing fatigue life to less than spec requirements.

Correct chafing condition between the hydraulic reservoir and structural components of the aircraft

The trailing edge flap experienced a fatigue failure during ground testing. This change incorporates improvements to the trailing edge flap to assure fatigue life requirements are met

Improve boarding ladder sensors to prevent incorrect stowage indications

Redesign the brake piston assembly to improve reliability

Redesign the ice detector system to reduce the number of false positives

Correct chafing condition between aircraft structural material and the APU SCV to prevent damage to the aircraft structure

Add a layer of corrosion preventative between the fuel probe and its mounting to prevent galvanic corrosion between dissimilar metals

Procures Common Preamps not funded in Lot 24

Failure analysis of FT76 Test Article bolt crack has resulted in a safe life determination of less than 6000 hours

To improve reliability of the Hydraulic components failures

Full life retrofit of the external fuel valve

Final and full life fix of issues under ECP-6235

Modifies the aircraft to correct structural fatigue problems caused by degraded bay over-temperature

Failure analysis of cracks in the Mid-board Pylon Fitting discovered during teardown of the FT77 Test Article, has determined that it does not meet the 6000 hour specification requirement

Redesign/Re-qualify of ECS hardware to actual A/C Environment

Full life retrofit fix of the AFT engine mount pin

Software Upgrade

ECP-JAX-SE-027 / G81S00004 SE UPGRADE, (ECP-JAX-SE-027)
 Hornet Feather (Vane) Wear PAD Retention System Redesign, (ECP-6075)
 Repeatable Release Holdback Bar, (ECP-IRRHB-0147)
 LEX Right Hand Walkway Mat, (ECP-6283)
 Inlet Nacelle Bleed Plate Crack, (ECP-6227C1)
 Throttle Electronics Module Seal Improvement, (ECP-6228)
 Horizontal Stabilizer/Fuselage Rubbing, (ECP-6234)
 Inadequate Clearance b/w APU Surge Control Valve and Y568 Support, (ECP-6238)
 FT50 18k Fuselage Outboard Former @ Y679 Failure, (ECP-6239)
 FT50 18K MLG Sidebrace Fitting Failure, (ECP-6240)
 FT76 Jackpoint Support Fitting Life Limit, (ECP-6243)
 INBOARD WING CLOSURE BOLT, ANTI-ROTATION RETAINER, (ECP-6245)
 FT76 Y301 Sheet Metal Routing Closure Life Limit, (ECP-6246)
 FT50 18K Y520 Former Cracks at Lower Drop Link, (ECP-6247)
 Tank 1 Improvements - Vent Cap Addition, (ECP-6248)
 Nut Plate Installation Sealing, (ECP-6249)
 FT76 Bay 3-4 Avionics Door Seal Support, (ECP-6256)
 HFC-125 Fire Extinguisher Mount - Final Corrective Action, (ECP-6257)
 FT76 Z90 Longeron Life Limit, (ECP-6259)
 FT50 18K Y491 Bulkhead Redesign, (ECP-6260)
 FT76 L/H LEX Intermediate SPAR Life Limit, (ECP-6261)
 RH LEX CLOSURE AT Y301 LIFE LIMIT, (ECP-6263)
 FT50 Y436 BULKHEAD LIFE LIMIT, (ECP-6264)
 FT76 Aft Windshield Attach Bolt Life Limit, (ECP-6269)
 FT76 LH LEX Closure at Y265, (ECP-6270)
 FT76 NLG Retract Actuator Supports & X7 Keel, (ECP-6271)
 FT77 Wing Inboard Closure Rib Life Limit, (ECP-6275)
 FT76 LEX Intermediate Spar at Y301 Life Limit, (ECP-6276)
 FT76 Canopy Sill Longeron and Upper Nose Barrel Longeron at Y204 Life Limit, (ECP-6278)
 MLG Wheel Well Drainage, (ECP-6280)
 TEF SHROUD LINK, (ECP-6284)
 FT77 Lower Wing Skin Splice Fitting Life Limit, (ECP-6285)
 Low Speed Loss of Normal Brakes with Anti-Skid On, (ECP-6286)
 FT76 Avionics Bay 3 & 4 Door Hinges, (ECP-6292)
 FT50 18K Access Panel Edge Stiffener Redesign, (ECP-6293)
 FT77 Trailing Edge Flap Actuator Rib Life Limit, (ECP-6294)
 EA-18G Correction of Operational Test Discrepancies (ECP-XXX41)
 FT77 Wing Spar 6 Life Limit, (ECP-6295)

To support the F/A18 Interconnect Bob (IBOX), FLIR Power Supplies, and Strobe light power Supplies. (NRE & Data)
 To redesign the Hornet Feather Wear Pad Retention System. The Hornet Feather pads have caused excessive wear of the engines afterburner ring on flight test ac
 Safety ECP, the RRHB (PLS) premature releases cause aircraft, flight deck, and personnel hazard condition
 Safety ECP, this ECP adds a walkway mat to the Right Hand Lex to replace existing anti-skid surface
 Cracks have been found on the Inlet Nacelle Bleed Plate caused by acoustic fatigue
 The throttle module sealing improvement adds various seals to the throttle electronics module to permanently prevent water intrusion into the box
 Fuselage and Horizontal Stabilizer are rubbing against each other under aerodynamic load
 Redesign the 74A328283 ECS Floor Support so that adequate clearance exists between the APU Surge Control Valve and the ECS Floor Support to meet specification clearance requirements
 To redesign the web of the aft fuselage outboard former at Y679 resulting from cracks that were discovered during inspections conducted following the third lifetime of testing on the FT50 fatigue test article
 To redesign the LHS MLG Sidebrace/Retract Actuator Fitting resulting from cracks that were discovered during inspections conducted following the third lifetime of testing on the FT50 fatigue test article.
 Failure analysis of an FT76 Test Article crack discovered during teardown has resulted in a safe life determination of 5200 SFH
 During FT77 testing, at 3188 SFH inspections revealed broken lock-wires between fasteners thru the inbd closure rib. Additionally, several other fasteners had backed out of holes thru the inbd closure rib
 Failure analysis of cracks on the Y301 Sheet Metal Routing Closure (74A305026-2005, -2006, -2009), discovered during teardown on the FT76 Test Article, has determined that the details do not meet full life requirements
 Cracks were found on the Y520 Former during the FT-50 Teardown. The cracks were located in the LHS former flange to web fillet radius, common to the lower drop link connection to the former
 This ECP will cover the retrofit incorporation of Vent Tube Cap into Tank #1 to prevent leaks
 Missing, inconsistent, and potentially unclear engineering drawing callouts for wet installation of nut plates may have contributed to missing face surface sealant on subcontractor installed nut plates
 Failure analysis of cracks on the Bay 3-4 Avionics Door Seal Support (74A305268-2002, -2003, -2004), discovered during teardown on the FT76 Test Article, has determined that the details do not meet full life requirements
 Failure of HFC-125 Fire Bottle mounts identified during AFC-440 Fire Bottle Cartridge Retrofit on some A/C. The F/A-18E/F contract requires a 6000-hour service life. This ECP corrects this condition
 Revise five (5) fastener hole callouts from Class 2X fit to Interference fit for Production. Interim Production/Retrofit- Install five (5) 1st Oversize Interference fit fasteners
 Cracks were found on the Y491 Bulkhead during the FT-50 Teardown. The cracks were located at the access hole at Z100 and the keel web attachment. Test Correlation analysis indicates the Safe Life is 4550 SFH. The F/A-18E/F contract requires a 6000-hour service life
 Failure analysis of two cracks LH LEX Intermediate Spar at the CY286 Rib attachment, discovered during teardown on the FT76 Test Article, has determined that the spar does not meet full life requirements.
 Failure analysis of cracks on the RH LEX Closure at Y301, discovered during teardown on the FT76 Test Article, has determined that the closure does not meet full life requirements
 During tear down of the FT-50 test article cracks were found on the Y436 Center Bulkhead (74A325203 -2005) at the attachment of the dorsal deck stiffener on both the LH and RH
 Failure analysis performed on a crack on the LH Aft Windshield Attach Bolt has determined that this bolt does not meet full life requirements
 Failure analysis of the cracks at the LH LEX Closure at Y265 (CY260 Rib Attachment), discovered during teardown on the FT76 Test Article, has determined that the spar does not meet full life requirements
 Retrofit is to replace (19) 3/16 in. Diameter Fasteners (Class 2X) With (9) 2nd Oversize in. Diameter Interference Fit Fasteners & (10) in. Diameter Interference Fit Fasteners
 Failure analysis of three cracks in the Inboard Closure Rib at two hydraulic pass through holes, discovered during teardown of the FT77 Test Article, has determined that it does not meet the 6000 hour specification requirement
 Failure analysis of a crack in the LEX Intermediate Spar Integral Stiffener @ Y301, discovered during teardown on the FT76 Test Article, has determined that the detail does not meet full life requirements
 Failure analysis of cracks in the Canopy Sill Longeron and the Upper Nose Barrel Longeron @ Y204 discovered during teardown on the FT76 Test Article, has determined that the details do not meet full life requirements
 Water retention in the recesses of the trailing edge casting common to the L/RHS Strut Doors
 Recent analysis to determine root cause of fleet failures has led to the finding that the TEF inboard link does not meet static requirement and loose jam nuts and maximum rigging length of the lower clevis exacerbate the problem
 Failure analysis of a drain hole crack in the Wing Lower Splice Fitting discovered during teardown of the FT77 Test Article, has determined that it does not meet the 6000 hour
 The aircraft specification requires that the brake control system shall provide a means of controlling brake pressure on all landing surfaces on which the aircraft is designed to operate. The control speed range shall be from maximum ground speed to the lowest speed compatible with ground handling. A condition has occurred on some fielded Skid Control Systems where the combination of left hand transducer and skid control unit results in loss of brakes during extended taxi operations with anti-skid ON
 The Bay 3/4 Avionics Door Hinges and Hinge Pins were cracked at several tang locations and the Hinge Pins were broken at four locations. Some of these cracks were initially discovered after 12,000 SFH of fatigue testing and remaining anomalies during teardown of the FT76 Test Article. Failure analysis of FT76 Test Article crack resulted in a safe life determination of 2350 SFH
 Cracks were found on the door edge stiffener at Y524 during the FT-50 Teardown. Test Correlation analysis indicates the Safe Life is 4500 SFH
 Failure analysis of a fastener hole crack in the TEF Actuator Fitting discovered during teardown of the FT77 Test Article, has determined that it does not meet the 6000 hour service life
 Redesign / Modify system and / or subsystems discrepancies discovered during OPEVAL.
 Failure analysis of a crack in the inboard radius of the spar discovered during teardown of the FT77 Test Article, has determined that it does not meet the 6000 hour service life

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Each change has been or will be tested prior to installation in the F/A-18 and EA-18G

2. Asterisk indicates amount less than \$50K
3. "Installation Kit" procurement quantity exceeds "Installation" quantity due to some kits being installed at the Organizational Level.

Exhibit P-3a

INDIVIDUAL MODIFICATION

MODIFICATION TITLE: **CORE AVIONICS IMPROVEMENTS / UPGRADES (OSIP 023-04)**

MODELS OF SYSTEM AFFECTED: **F/A-18A-F**

TYPE MODIFICATION: **Capability and Reliability Improvements**

DESCRIPTION/JUSTIFICATION:

This OSIP is required to upgrade retrofits and improvements to various pieces of avionics equipment that have been or are being incorporated into production aircraft and to provide Mission Planning updates. Specifically for Mission Planning, the F/A-18 Unique Planning Component (UPC) for the Joint Mission Planning Systems (JMPS) must implement frequent software changes in conjunction with production aircraft modifications. The JMPS UPC changes required in conjunction with software configuration set (SCS) changes must include software regression tests to ensure proper operation and integration with other aircraft systems in JMPS components, and the core mission planning equipment and software procured elsewhere within the Navy budget. This OSIP currently includes a requirement to retrofit a Solid State Recorder (SSR) and Upgraded Solid State Recorder (USSR) into F/A-18E/F aircraft. SSR's do not provide 8X10 display recording which is captured with this upgrade. This retrofit leverages non-recurring integration for Lot 29 aircraft production incorporation, replacing the current Cockpit Video Recording System (CVRS) recorder.

This OSIP also includes a requirement to retrofit the Deployable Flight Incident recorder System (DIFRS) to address the issue of the current COSPAT SARSAT satellite becoming obsolete. This old satellite frequency will be replaced and the DIFRS box will be modified to work with a new satellite Beacon frequency.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

A Mission Planning system supporting F/A-18A-F is currently fielded. A Joint Mission Planning System (JMPS) was developed and fielded for F/A-18A-F in the first quarter fiscal year 2005 with 19C and H2E+. The Solid State Recorder retrofit was approved as a Congressional new start in August 2004. Validation/Verification for the SSR was completed in the second and third quarter fiscal year March 2005, with retrofit on two squadrons completed in the fourth quarter of fiscal year 2005.

MODIFICATION TITLE: RESERVE SQUADRON ECP 560 OSIP 08-05

MODELS OF SYSTEM AFFECTED: F/A-18A TYPE MODIFICATION: AVIONICS UPGRADE

DESCRIPTION/JUSTIFICATION:

Upgrade Avionics for F/A-18A Hornets (Lots 8 and 9) for the U.S. Naval Reserve Force. The Avionics Upgrade includes new avionics subsystems already incorporated or in process of being incorporated into USN/USMC and/or FMS F/A-18 aircraft. This ECP incorporates the following systems: AN/ARC-210(V) with HAVEQUICK II and SINGARS; Digital Communications System (DCS) Receiver Transmitter (RT-1824(C)); Mission Computer CP 2360 (XN-8); Stores Management Set (SMS) (AN/AYQ-9); AMRAAM Capability (radar mod, launchers, weapons pylons and control stick); Digital Display Indicator (DDI) Upgrade; Mission Data Loader (AN/ASQ-215); Targeting FLIR provisions (AAS-38B).

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

ECP 560 was approved in March 1998. All the equipment being incorporated in this ECP has completed development.

Exhibit P-3a **INDIVIDUAL MODIFICATION**

MODIFICATION TITLE: Link 4A Replacement (OSIP 009-06)

MODELS OF SYSTEM AFFECTED: F/A-18A E/F/G TYPE MODIFICATION: AVIONICS UPGRADE

DESCRIPTION/JUSTIFICATION:

The RT-1379A Link-4A system provides Aircraft Carrier Landing (ACL), Vectoring, and Shipboard INS (SINS) alignment capability. The basis for the RT-1379A is the RT-1250A/ARC-182 Radio which is re-furnished GFE from Rockwell Collins (RC) for a re-use program. RC re-uses 4 cards from the ARC-182 (A2, A4, A5, and A6) and builds 3 new cards (A1, A3, and A7). Boeing then purchases the re-manufactured RT-1379A from RC for the cost of the new cards, refurbishment, and unit testing, before providing it to the Navy as CFE. The RT-1379A is located in the starboard right-hand LEX position. Rockwell-Collins plans to discontinue support of the ARC-182 product line including the RT-1379A starting on 30 September 2007. The reasons for discontinuance include: an inability to procure electrical components to accomplish receiver-transmitter maintenance repairs and remanufacture; low product volume; aging test equipment; and diminishing technical expertise (late 1970s design technology). Cross Decking of existing RT-1379A radios, upgrading and remanufacturing high failure rate SRAs, and replacing the depot repair capability for the RT-1379A is also required to support fleet requirements through FY22.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

The F/A-18 RT-1379A Replacement Program was initiated by a formal PMA-265 Diminishing Manufacturing Sources Review Board (DMSRB) decision on 12 December 2003, which approved the selection of the RT-1824(C) Digital Communications System (DCS) Radio as the replacement candidate for this effort. The replacement program is scheduled to be introduced with Lot 31 E/F/G aircraft, and is dependent on the H4E and H5E System Configuration Set (SCS) Block Operational Flight Program schedule, and is anticipated to have a Fall 2007 Fleet release. A 4-5 year retrofit program will commence one year later. Issue 22136 reduced funding for ACLS which consists of both the Link-4a and the APN 202. The goal of issue 22136 was to replace retrofit of the Link-4a solution with an alternate plan of obsolescence management such as refurbishing older units vice new purchases. The new strategy is to retrofit the aircraft with APN 245 which is an updated version of the APN 202.

Exhibit P-3a

INDIVIDUAL MODIFICATION

MODIFICATION TITLE: AESA/AN-APG-65/AN/APG-73 (OSIP 002-07)

MODELS OF SYSTEM AFFECTED: F/A-18 A/B/C/D/E/F TYPE MODIFICATION: AVIONICS UPGRADE

DESCRIPTION/JUSTIFICATION:

The F/A-18E/F and EA-18G program has developed and integrated the AN/APG-79 Active Electronically Scanned Array (AESA) RADAR system for installation in Lot 26 and subsequent Block II, Super Hornet and Growler aircraft. The integration of the AN/APG-79 AESA RADAR system into the F/A-18E /F and EA18G greatly improves the weapon system's threat detection range, high resolution Synthetic Aperture RADAR (SAR) ground mapping capability, survivability and reliability. This OSIP also includes ECP 6279 which incorporates Osprey Holstein requirements and funds to support ECP 508 which converts some AN/APG-65 radars to AN/APG-73 and non-recurring for reliability and operational safety improvements into the AN/APG-65 and AN/APG-73 Radars. Recurring cost is within the ECO cost element.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Forward fit of the AN/APG-79 AESA RADAR system began with 8 units in Lot 27, 12 units in Lot 28 and 22 units in Lot 29. Beginning in Lot 30, all F/A-18 E/F and EA-18G aircraft will be forward fit with the AN/APG-79 AESA RADAR. This OSIP includes the retrofit of the AN/APG-79 AESA system into 135 Lot 26-29 F/A-18E/F aircraft previously outfitted with AN/APG-73. The procurement of kits will commence in FY08 with the first installation occurring in FY10. The installation of kits will be accomplished by a Fleet Support Team traveling to two locations (NAS Oceana and NAS Lemoore) and executing the retrofit of aircraft by squadron. This OSIP also includes funds to support ECP 508 that converts some AN/APG-65 radars to AN/APG-73 and non-recurring for reliability and operational safety improvements / obsolesce into the AN/APG-65 and AN/APG-73-RADAR's.

DESCRIPTION: DESCRIPTION: THIS LINE ITEM FUNDS MODIFICATIONS TO THE H-46 AIRCRAFT. THE H-46 IS A TWIN-TURBINE POWERED DUAL-PILOTED TANDEM-ROTOR HELICOPTER. THE CABIN CONTAINS PROVISIONS FOR ACCOMODATING 25 TROOPS AND CREW MEMBERS. THE CABIN ALSO CONTAINS AN INTEGRAL CARGO AND RESCUE SYSTEM. THE OVERALL GOAL OF THE MODIFICATION BUDGET IN FY2008 IS TO KEEP THE H-46 A VIABLE PLATFORM UNTIL A REPLACEMENT AIRCRAFT CAN BE FIELDDED. H-46 HELICOPTERS ARE USED BY THE MARINE CORPS FOR TROOP TRANSPORT AND SEARCH AND RESCUE MISSIONS. USMC INVENTORY: (220) CH-46E + (3) HH-46D. (24) OF THE (220) CH-46E'S ARE RESERVE AIRCRAFT. ORIGINAL DESIGN SERVICE LIFE WAS 10,000 HOURS. IT WAS SUBSEQUENTLY EXTENDED TO 12,500 HOURS ON 18 DEC 1992 AND TO 15,000 HOURS ON 16 FEB 1996. AIRCRAFT WILL CONTINUE TO BE FLOWN PAST 15,000 FLIGHT HOURS ON AN AGE EXPLORATION PROGRAM.

*\$18.468M received in FY 2007 Title IX.

MODIFICATION TITLE: SAFETY IMPROVEMENT (OSIP 025-97)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: The Safety Improvement Program was directed by Chief of Naval Operations (CNO) letter 7100 serial N880F/7U660758 dated 10 Jan 97, and approved as an Abbreviated Acquisition Program (AAP) by the Program Executive Officer (PEO) on 24 Oct 97. This program contains the following Engineering Change Proposals (ECP):

1. HYDRAULIC SYSTEM UPGRADE and UTILITY HYDRAULIC SYSTEM REDESIGN: This ECP was completed in FY2000, but the fleet has experienced ongoing problems with the hydraulic system following installation of the modification. The Utility Hydraulic System Redesign will assess the overall configuration of the hydraulic system and correct deficiencies to improve system performance. This modification will be installed in 177 CH-46E aircraft (153 active + 24 reserve).
2. LOWER DUAL BOOST ACTUATOR (LDBA) and APU deck: The housing for the actuator is highly susceptible to stress corrosion cracking (same issues with APU deck). The material wear and housing cracks have resulted in LDBA malfunction. The pilot cannot control the drive direction of the helicopter, a potentially life threatening situation. This program will procure a redesigned actuator housing that eliminates the failure mode in the LDBA. This modification will be installed concurrent with Fleet Exchange (FE) repairs. This modification will be installed in 177 CH-46E aircraft (153 active + 24 reserve).
3. NIGHT VISION GOGGLE (NVG) COMPATIBLE COCKPIT and NVG COMPATIBLE COCKPIT DOME LIGHT: This ECP is complete.
4. RUNNING ENGINE WASH: This ECP is complete.
5. SLIDING RESCUE HATCH (HELL HOLE DOOR): This ECP is complete.
6. ALQ-157 INFRARED COUNTERMEASURES (IRCM): This ECP is complete.
7. AN/ALE-47 COUNTERMEASURES DISPENSING SYSTEM (CMDS): This ECP is an Aircraft Survivability Equipment (ASE) modification to improve aircraft operation/maintainability/survivability in combat operations. This safety improvement upgrades the AN/ALE-39 (CMDS). It improves the reliability, reduces fleet operational cost and enhances the ASE capabilities of the CH-46E aircraft operating in hostile environments by addressing the problems of "Things Falling Off Aircraft" (TFOA) and uncommanded dispensing of countermeasures. This improvement will be installed in 214 CH-46E aircraft in support of OIF II.
8. AN/AAR-47(V)2 MISSILE WARNING SET INSTALLATION: This ECP is an Aircraft Survivability Equipment (ASE) modification to improve aircraft operation/maintainability/survivability in combat operations. The current system has a high false alarm rate resulting in premature flare launch. The modification will improve reliability in missile protection by reducing the false alarm rate, which in turn will conserve flares. This improvement will be installed in 214 CH-46E aircraft in support of OIF II.
9. HH-46E SEARCH AND RESCUE (SAR) CONVERSION: All Navy H-46Ds have been retired leaving the Marine Corp as the sole operator of the H-46D Type-Model-Series (TMS). The high flight hours on the HH-46Ds airframes, poor engine reliability and obsolescence issues make this aircraft difficult and expensive to operate and maintain. This ECP will convert 3 CH-46E helicopters to the HH-46E configuration to perform the SAR mission, and will permit retirement of the H-46D TMS.
10. CH-46E FBCB2 (FORCE BATTLE COMMAND BRIGADES & BELOW) BLUE FORCE TRACKER - The US Army AVIATION FORCE XXI BATTLE COMMAND BRIGADE & BELOW (FBCB2) BLUE FORCE TRACKING (BFT) SYSTEM is the common BFT system being installed in CH-53E and CH-46E helicopters. This program provides for an integrated installation by developing a more appropriate mounting location, improving the cable routing for the cockpit displays and by allowing for the use of the on board GPS. This integration will allow the cockpit crew more control of the system, improve the safety aspect by removing loose cables from BFT mission kit to cockpit EDMs, reduce operational weight, improve readiness/availability of the BFT, and increase available space for payload by removing the BFT mission pallet from the cargo area of the aircraft. The BFT will be installed in 154 aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

1. UTILITY HYDRAULIC SYSTEM REDESIGN: The nonrecuring engineering is complete, and production installations are ongoing.
2. LOWER DUAL BOOST ACTUATOR: The LDBA manifold has been redesigned & qualified, and manifolds are in production.
3. NVG COMPATIBLE COCKPIT DOME LIGHT: This upgrade is complete.
4. T58-16/402 RUNNING ENGINE WASH: This upgrade is complete.
5. SLIDING RESCUE HATCH (HELL HOLE DOOR): This upgrade is complete.
6. ALQ-157 INFRARED COUNTERMEASURES (IRCM): This upgrade is complete.
7. AN/ALE-47 COUNTERMEASURES DISPENSING SYSTEM (CMDS): This ECP was approved 26 Feb 2004. Depot installs are ongoing.
8. AN/AAR-47(V)2 MISSILE WARNING SET INSTALLATION: This ECP was approved 26 Feb 2004. Depot installs are ongoing.
9. HH-46E SEARCH AND RESCUE (SAR) CONVERSION: NRE for SAR conversion is in work. The first aircraft for SAR conversion is scheduled for induction 4th quarter FY06 with planned delivery 2nd quarter FY07.
10. CH-46E FBCB2 (FORCE BATTLE COMMAND BRIGADES & BELOW) BLUE FORCE TRACKER - The FY06 GWOT funding purchased a non integrated "A" kit installation in 154 aircraft and 61 "P" kits (mission kits).

MODIFICATION TITLE: ENGINE CONTROL SYSTEM (OSIP 028-99)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: The current H-46 Engine Condition Control System (ECCS) has several failure modes, which cause engines to shut down in flight; this presents a significant safety hazard to the fleet. Three bulletins have been issued by NAVAIR to inspect for system deficiencies. A formal system safety analysis utilizing historical failure data defines this as a Category One hazard and predicts six to seven failures per year. In the three and a half years before this upgrade was initiated there were 35 hazard reports (HAZREPs) issued documenting this failure mode, and it is estimated that 20 more occurred which were not reported through the HAZREP system. The aircraft has a limited single engine-operating envelope and is vulnerable to engine failure while flying and hovering over water. There have been five aircraft lost at sea in which pilots reported engine failure as the cause of the mishap. The aircraft were not recovered, and therefore, the specific engine failure mode could not be determined, but it is likely that ECCS caused some of the engine failures and ultimately led to the loss of aircraft. The propose solution to this safety problem is to convert to an alternative Engine Control System (ECS) utilized by the commercial variant of the H-46. The proposed ECS will eliminate the safety failure modes, has a proven track record, needs only slight modification for military use, increases reliability, and will increase aircraft capability through increased engine responsiveness. Implementation will require configuration changes to the airframe and the engine. This is an urgent safety issue that must be resolved to eliminate future loss of crew and aircraft. This modification was installed on 65 H-46D aircraft (all active) and 226 CH-46E aircraft (202 active + 24 reserve).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The contract for Proof of Concept, validation and verification (val/ver) kits for this Non-Development Item (NDI) was awarded May 1999, and the Engineering Change Proposal (ECP) was approved Jun 2000. Validation installation for D-model was completed 2nd quarter FY2001, followed immediately by Electromagnetic Interface (EMI) testing and Verification installation in 3rd quarter FY2001. Production installations in Navy D-models are complete. The CH-46E validation/verification/testing testing is complete, Final E-model installations are in process.

MODIFICATION TITLE: ELECTRICAL SYSTEMS UPGRADE (OSIP 029-99)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: This program contains the following Engineering Change Proposals:

1. GENERATOR CONTROL UNIT: The power generation system was the cause of ten hazard reports (HAZREP) in the three years before this upgrade was initiated. The causal factor has been traced back to the generators and the voltage control system. Two incidents resulted in dual generator failure, and seven incidents resulted in aircraft smoking / fires. (One of those fires was caused by flammable fluid ingestion into the generator that turned a hydraulic leak into a massive fire that consumed the entire aircraft in a Class A mishap.) A formal system safety analysis utilizing historical failure data defines this hazard as a potential Category One hazard and predicts two to three failures per year. This is an urgent safety problem that must be alleviated to eliminate loss of life and aircraft. The proposed solution is to modify the power generation system to eliminate the safety problem, provide cleaner power to sensitive avionics components, and improve performance of the generator to meet the power demand for future electrical installation in the aircraft. This modification will be installed in 226 aircraft (202 active + 24 reserve).
2. PERMANENT MAGNETIC GENERATOR (PMG) WIRING: RCM analysis of generator failure modes, and risk hazard analysis indicates that risk can be mitigated with a combination of replacing PMG and main generator power wiring, and inspecting to ensure proper clearances between lines and electrical power wire. Validation / Verification is complete and production installations are ongoing. This mod will be installed on 188 aircraft (164 active + 24 reserve).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

1. GENERATOR CONTROL UNIT: This upgrade is complete.
2. PERMANENT MAGNETIC GENERATOR (PMG) WIRING: Val/Ver installations complete, and installation of wiring is ongoing.

MODIFICATION TITLE: Engine Reliability Improvement Program (OSIP 015-01)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: T58-GE-16 reliability and performance trends were unacceptable prior to 2001 and were severely impacting Fleet safety, readiness and war fighting capability. Without corrective action, the T58-GE-16 Mean Time Between Repairs (MTBR) was projected to fall below 320 hours by FY2002 and would require 309 major repairs per year. The NAVAIR System Safety Team determined that the Hazard Risk Index (HRI) for the T58-GE-16 was "IIC" (critical, occasional) and trending towards "IIB" (critical, probable). The H-46 Helicopter must be logistically supported until at least 2015; however, T58-GE-16 support costs were being driven to unaffordable levels. This program will drastically improve Fleet operating safety and readiness, while providing tremendous reductions in maintenance man-hours and Operations & Support (O&S) costs. Funds support production and procurement of a T58-GE-16 engine core or "Gas Path", depot overhaul of key engine accessories, incorporation of all approved engine Component Improvement Program (CIP) changes, and depot final assembly of manufacturer delivered "Gas Path" with accessory components. This program is projected to restore a 900-hour(MTBR), restore performance to the original power specification, and reduce the major engine repairs to 165 in FY2006. This modification will be installed in 223 aircraft (199 active + 24 reserve).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Congress approved \$3M plus-up in FY2001 for risk mitigation, prototypes, and non-recurring engineering; the contract for these efforts awarded in Jan 2001. The prototype engine gas path modules were delivered in Apr 2002, and the engine prototypes were completed in Jul 2002. A Low Rate Initial Production (LRIP) contract was awarded in Aug 2002, and gas path module deliveries started in Oct 2003 with the first ERIP configuration units fielded to the fleet in Mar 2003. Approval for Full Rate Production (FRP) was granted and the first production lot was ordered Mar 2003. Initial Operational Capability (IOC) was reached in Dec 2003 and installations are ongoing.

MODIFICATION TITLE: AIRCRAFT INTEGRATED MAINTENANCE SYSTEM (OSIP 010-03)

MODELS OF SYSTEMS AFFECTED: H-46 TYPE MODIFICATION: RELIABILITY & MAINTAINABILITY (HONA Category B)

DESCRIPTION / JUSTIFICATION: Aircraft Integrated Maintenance System (AIMS) is a Commercial Off The Shelf (COTS) vibration monitoring system to be permanently installed in the aircraft. AIMS is a comprehensive set of aircraft monitoring hardware and support hardware. It interfaces with the cockpit crew via the Control Data Navigation Unit (CDNU), which has extensive software upgrades. The purpose of the system is to build support equipment functions into the aircraft as a permanent installation. Thus, AIMS will eliminate most H-46 peculiar support equipment requirements. This equipment will provide aircrews immediate feedback on aircraft condition and engine performance, which enhances the ability to predict catastrophic failures and reduces maintenance costs. In 1997, PMA226 fielded new vibration equipment to a small sample of H-46 aircraft and implemented a 100-hour vibration monitoring check. Since implementation, vibration monitoring has been instrumental in predicting (and preventing) impending component failures. For example, vibration data was received from an aircraft that had undergone three aft transmission removals for input pinion seal leakage. Analysis of the vibration monitoring data revealed a major problem with the #2 engine. Further investigation of the engine revealed impending failure of the right angle drive bearings. Failure of the engine may have resulted in damage or loss of the aircraft. Another example is an aircraft that, while performing a 100-hour vibration check, experienced aft transmission vertical vibration levels that exceeded acceptable limits. Further investigation revealed impending failure of the electrical generator. Without vibration monitoring, the problem with the generator would have gone undetected until catastrophic failure. Failure of the generator may have resulted in an electrical fire and/or collateral damage to the aircraft. This modification will be installed in 154 aircraft (130 active + 24 reserve).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Contracts to integrate the AIMS into the H-46 aircraft, design an installation kit, modify Control Data Navigation Unit (CDNU) software, and prepare technical data were awarded in Jun 2003. Prototype kits delivered in Feb 2004, the hardware Critical Design Review (CDR) was held in Jul 2004, and the software CDR was completed in Aug 2004. Validation/Verification completed May 2005 and Electro Magnetic Interference (EMI) testing in Jul 2004. The first production lot delivered in Jan 2005 and production installations are ongoing.

MODIFICATION TITLE: LIGHTWEIGHT COCKPIT SEATS (OSIP 011-05)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: The efficiency of the CH-46E to perform the medium lift assault support mission largely depends on aircraft payload. The empty weight of the aircraft has increased significantly over the aircraft's more than 40 years of service, limiting payload and range, and degrading mission performance. The replacement of pilot, co-pilot, crew chief, and aerial observer seats with a non-developmental military qualified/certified, armored, in-production seat is low risk, and will eliminate the need for lengthy nonrecurring engineering and testing. Modern seats would recover up to 250 pounds of payload and provide the latest in survivability technology. Reducing the empty weight of the aircraft is an extremely viable means of restoring mission effectiveness. The seats will be installed on 164 CH-46E aircraft (140 active + 24 reserve).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Nonrecurring engineering for pilot/co-pilot seats is complete. The Critical Design Review (CDR) was conducted 08 Dec 2005. A firm fixed price contract for pilot/co-pilot armored seats awarded 06 Jan 2006, with deliveries starting Jun 2006. Additional National Guard and Reserve Equipment Account (NGREA) funding is buying seats for reserve aircraft. Nonrecurring engineering for aerial observer and crew chief seats is scheduled in FY2006/FY2007 to be followed by contract award for production articles in FY2007.

MODIFICATION TITLE: CH-46 GERIATRIC AIRCRAFT SAFETY AND SUSTAINMENT PROGRAM (OSIP 018-07)

MODELS OF SYSTEMS AFFECTED: H-46 SERIES TYPE MODIFICATION: SAFETY (HONA Category A)

DESCRIPTION / JUSTIFICATION: Provides targeted initiatives to remedy the top age-related safety and reliability issues and to address the heavy wear-and-tear effects of high-tempo GWOT operations on H-46 airframes and subsystems in order to ensure safe, reliable and effective aircraft operation throughout the USMC Medium Lift transition period. In 2006, the average age of the H-46 helicopter is 39 years, and CH-46E squadrons deployed in support of GWOT have been flying in excess of 400% of planned utilization rate, creating a set of conditions that jeopardize the safety and reliability of the H-46 fleet. The H-46 Geriatric Aircraft Safety and Sustainment Program is driven by the H-46 Age Exploration Program, Systems Safety Working Group and other Fleet forums and provides redesign and modernization efforts in the following areas:

1. Redesigned and modernized wiring harnesses in airframe areas subject to high levels of heat, sand contamination and/or vibration.
2. Redesigned and modernized hydraulics subsystems using common or COTS components.
3. Redesigned and improved portions of airframe structure subject to high levels of fatigue, corrosion and other stress.
4. Improved and modernized critical avionics and other aircraft systems to resolve obsolescence, reliability or safety issues using common, previously qualified or COTS solutions. This initiative replaces components that are no longer supported in the supply system or are high maintenance degraders with modern, digital components maximizing commonality with other Naval aircraft to improve reliability, increase functionality and capabilities.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: NRE efforts are currently underway. Contracts for Integration testing, prototype kits and production options will be awarded in FY2008. Prototype kit validation and verification will be performed in FY2008 and production installs will commence in FY2009.

DESCRIPTION: This line item funds modifications to the AH-1W aircraft. Modifications prior to FY 1997 were funded in the H-1 Series P-1 line item. There are 174 AH-1W's. The AH-1W is a tandem set, two place (pilot and gunner/co-pilot) attack helicopter designed and built to provide the high speed and maneuverability required by the attack mission. The armament of the AH-1W includes the SIDEWINDER, TOW, and HELLFIRE missile systems, a chin-mounted 20mm turret gun, and wide variety of forward firing and gravity released external stores. Operational Requirements Documents (ORD) AAS-35 covers all OSIPs listed below. The overall goal of the modifications budgeted in FY2008 is to continue to fulfill the operational requirement to detect, identify and destroy tactical sized armored targets with precision guided munitions during the day, at night, and during adverse weather, as well as providing enhanced conventional weapons delivery by utilizing the systems laser ranging and designating system. The specific modifications budgeted and programmed are:

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

Exhibit P-3a

MODIFICATION TITLE: AH-1 NIGHT TARGETING(OSIP 008-90)

MODELS OF SYSTEMS AFFECTED: AH-1W TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: The U.S. Marine Corps (USMC) has an operational requirement to detect, identify and destroy tactical sized armored targets with precision guided munitions during day, night and adverse weather conditions. The Night Targeting System (NTS) provides a night/adverse weather and designator TOW and autonomous HELLFIRE capability. In addition, NTS will provide enhanced conventional weapons delivery by utilizing the systems laser ranging system. This modification has two key parts: (1) the modification of the cockpit and the canopy places a radar altimeter in the front cockpit for the first time; and (2) the NTS itself. The Night Vision Goggle Helmet mounted Display and Improved Crew Restraint System completes the NTS modification. NTS will accomplish the USMC requirements for night operations by incorporating a high resolution stabilized forward looking infra-red sensor, changed copuled device camera system, automatic target tracking, and laser range finder/designator into the current M65 telescopic sight unit. Due to changes in the TOW missile control by addition of the NTS, a Buffer Box is being incorporated to ensure proper operation of the TOW missile with the NTS. Additional NTS WRA modifications to improve reliability, maintainability, and systems stabilization will also be incorporated.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The AH-1W Fleet has been fully outfitted with the Night Targeting System. There is a requirement to upgrade the Night Targeting System on to the AH-1W flying until 2015. Upgrades will include, but not limited to, the first generation FLIR with a third generation FLIR, replacing the black and white TV with a color TV, improve boresight, and continue to look at reliability maintainability and stabilization issues.

MODIFICATION TITLE: AH-1 APR-39 A(V)2(OSIP 016-98)

MODELS OF SYSTEMS AFFECTED: AH-1W/AH-1Z TYPE MODIFICATION: SURVIVABILITY

DESCRIPTION / JUSTIFICATION: Existing AH-1W aircraft self-protection/survivability systems are inadequate to cope with present-day threats. These engineering changes incorporate a survivability system that reduces aircrew workload, centralizes control functions and increases the helicopter's survivability during operations in or near hostile territory by providing additional threat detection capabilities; and enhanced missile and laser detection systems. The Integrated EW System consists of the AH-AAR-47 (V) 2 Missile Warning Set, modification to the existing wiring for installation of the APR-39(V)2 RWR, removal of the AN/APR-44(3) Radar Warning System (MWS), required interfaces, and AN/ALE-47. Additional survivability efforts covered by this OSIP include: IR Signature Reduction (IR Suppressors, Turned Exhaust), upgrades to all existing EW Suite equipment which includes AN/AAR-47(V)2, APR-39(V)2, ALE-47, ALQ-144 and A/C/Aircrew survivability through implementation of improved armor technologies including, but not limited to, transparent armor, armored panels and crew weapons mounts. Portions of the AH-1W Turned Exhaust will forward fit to the AH-1Z.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This program utilized operationally approved hardware to increase aircraft self protection and survivability. This modification will cover a quantity of 180 AH-1W aircraft and 2 AH-1W trainers. Additional Aircraft Survivability issues to be addressed as part of this OSIP include A/C IR signature suppression/reduction efforts (IR Suppressors and Turned Exhaust Systems).

MODIFICATION TITLE: AH-1W A/C & T700 ENG(OSIP 013-00)

MODELS OF SYSTEMS AFFECTED: AH-1W TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: This program is designed to address safety issues, such as mishap casual factors associated with maintaining an older type model series aircraft. The AH-1W helicopter is powered by two General Electric T700-GE-401 turboshaft engines which are controlled throughout the normal operating range by the Electrical Control Unit (ECU) and the Hydro-Mechanical Unit (HMU). Since 1994, 86 total power loss incidents have occurred with the T700-GE-401; 58 ground flameouts, 7 ground rollbacks, 10 inflight shut-downs, and 11 inflight rollbacks. These inadvertent power loss incidents severely jeopardize aircrew safety. Incorporation of a Digital Electronic Control Unit (DECU) with auto-ignition system will reduce the risk of an uncommanded engine flameout and complete power loss. This change will replace the EECU with a DECU which will be carried forward into the AH-1Z. Additional safety programs that will be implemented by this OSIP include, but are not limited to: Dynamic Component Change (DCC) to incorporate new chip detectors on the 42 and 90 degree gear boxes are required to provide improved warning of impending failure, and new diller caps to prevent internal corrosion caused by water intrusion. Equipment introduced by this change will be carried forward into the AH-1Z. Incorporation of Crash Attenuating Seat Cushions, to reduce the likelihood of back injuries to pilots during hard landings or crashes, will be investigated for modification. Additional A/C fatigue life issues, including, but not limited to rotor blades, stub wings and tailboom technology, will be investigated to improve performance and mitigate tailboom fatigue. Tailboom Strake technology will be investigated to improve performance and reduce tailboom fatigue. Reduction of cockpit vertigo inducing problems which include "A" Common Cockpit Processor (CCP), Blue Force Tracker (BFT), Head-up-display (HUD) Upgrades, Tactile Situation Awareness System (TSAS), Upgrade Transponder (CXP) Tactical Video System, will also be implemented via this OSIP. Additional improvements to increase reliability and reduce maintenance efforts (such as scratch resistant covers, damaged tolerant windscreens and tear-a-way covers, etc.) and mid-air collision avoidance systems will also be accomplished.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The DECU is a General Electric proprietary, non-developmental item used on the SH-60B and aircraft equipment with T700-GE-401C. Contract awarded 1st quarter FY00. Installation of prototypes were accomplished in 2nd quarter of FY01 to complete verification. This modification will carry forward to the AH-1Z.

Exhibit P-3a

MODIFICATION TITLE: AH-1 20MM LINKLESS FEED(OSIP 002-03)

MODELS OF SYSTEMS AFFECTED: AH-1W/AH-1Z TYPE MODIFICATION: SURVIVABILITY

DESCRIPTION / JUSTIFICATION: The U.S. Marine Corps (USMC) has an operational requirement for conventional weapons delivery. This initiative will replace the current feeder assembly with one that utilizes linkless, bulk 20MM ammunition common to all other DoN 20MM weapons system improvements (F/A-18, F-14, CWIS). The ammo can/feeder assembly is the highest reliability degrader in the gun system. In addition this OSIP provides for additional modifications, enhanced lubrication system/methodology, laser pointers, improved turret test console and improved barrel supports that will significantly increase the accuracy and reliability of this critical weapons system and enhance the survivability of the flight crew. The implementation of this modification will enhance the warfighter's capability to place more rounds on target by eliminating gun jamming significantly increasing reliability. This modification will be carried forward and must be forward compatible to the AH-1Z.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This initiative will be implemented by issuance of a new contract based on open competition between several manufacturers of 20MM Weapons System Improvements technology. Contract Award is scheduled for the 4th quarter of FY06. Production installations are forecasted to commence in the 4th quarter of FY07.

FINANCIAL PLAN: (TOA, \$ IN MILLIONS)

DESCRIPTION: This line item funds modifications to the CH-53D/CH-53E/MH-53E aircraft. As of 1 June 2005, there are 32 MH-53E Helicopters; 148 CH-53E Helicopters; and 37 CH-53D Helicopters. The CH-53E is a seven blade main rotor and a four-blade canted tail rotor helicopter powered by three T64-GE-416A turbo shaft engines on the CH-53E while the CH-53D has six main rotor blades and two T64-GE-413 engines. The CH-53D/E aircraft are capable of both land and ship based transport of heavy equipment, supplies, and personnel. The MH-53E is similar to the CH-53E with additional capabilities for Airborne Mine Countermeasures (AMCM), Vertical On-Board Delivery (VOD), and Special Missions which require longer range and more precise navigation than that of the CH-53E. The overall goal of the modifications budgeted in FY08 was increased communication and navigation, night vision capability, and fleet operation and safety performance in the H-53 community.

The specific modifications budgeted and programmed are:

Exhibit P-3a

MODIFICATION TITLE: HNVS(OSIP 012-92)

MODELS OF SYSTEMS AFFECTED: CH-53E (148) TYPE MODIFICATION: MISSION/PERFORMANCE ENHANCEMENT

DESCRIPTION / JUSTIFICATION: The Helicopter Night Vision System (HNVS) will provide an infrared night vision system for the CH-53E transport helicopters. The HNVS provides an improved night/all weather mission capability. This OSIP includes integration of the off the shelf APN-217(V)6 Doppler Navigation System and AAQ-16B/29/29A FLIR. Future configuration for CH-53E transport helicopter will be the AAQ-29A FLIR due to obsolescence issues for OEM with AAQ-29. Program is structured to replace AAQ-16 and AAQ-29 with AAQ-29A to establish a single configuration. Applicable ECP: 0231-E001

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The AAQ-16B/29 FLIR is a non-developmental Item (ND) currently installed on a number of U.S. Army, Air Force, and Navy helicopters. DT-IIIa on the CH-53E/HNVS was completed in the third quarter FY 94. Extension of application for CH-53E was granted first quarter FY 95.

Exhibit P-3a

MODIFICATION TITLE: ATTEN. TRP SEATS FOR(OSIP 020-97)

MODELS OF SYSTEMS AFFECTED: CH-53D (37), CH-53E (148), MH-53E (32) TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Utility and Troop transport mission increasing in importance. Current troop/passenger seats are 1950 generation. Design does not provide impact protection of current rotorcraft seat designs. The impulsive type loading experienced during survivable mishaps produces amplified seat/floor anchor loads and potentially injurious occupant decelerations. Due to this operational deficiency, NDI crashworthy troop seat program established. NDI are lightweight off-the-shelf seats that provide protection by limiting an occupants inertial loading to survivable levels by attenuating impact forces to below survivable ranges and enables the occupant to rapidly egress a downed aircraft are being sought.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: NDI procedures utilized for the Procurement, Installation and Support of the seats for all 46 CH-53D Helicopters. Funding for the 46 seats and associated requirements were appropriated in 1997. Program consists of a one-time procurement with a turn-key installation approach. FY-98 through FY04 provided for procurement, installation, and support of the CH-53E and MH-53E helicopters. FY05 supplemental funds provided for the NRE and initial procurement of troop seat upgrades to better accommodate today's troops and their body bourn equipment. FY06 supplemental funding will provide NRE, qualification, initial procurement, installation, and support for Crash Attenuating Crew Chief Seat for all H-53 Type/Model/Series helicopters.

Notes:

- CATS Upgrade kits are installed at O-level (no cost)
- Total quantities include Cruise Box Kits and Extension Brackets.
- 152 troop seats procured in prior years will not be installed until FY2006 and out due to availability of aircraft during the Global War on Terrorism. Installs are funded with prior year funds.
- FY06 Supplemental funding is used to procure kits in FY06 and install kits in FY07 and FY08.

1. Award date of Sept 2006 is based on 2 month Administrative Leadtime following receipt of FY06 Supplemental funding estimated in Jul 2006.
2. FY06 Supplemental funding is used to procure kits in FY06 and install kits in FY07 and FY08.

Exhibit P-3a

MODIFICATION TITLE: INTEGRATED MECH DIAG(OSIP 007-98)

MODELS OF SYSTEMS AFFECTED: CH-53E (148), MH-53E (32),CH-53E(22) LRIP Quantity TYPE MODIFICATION: SAFETY, READINESS AND MAINTAINABILITY

DESCRIPTION / JUSTIFICATION: IMD is a helicopter monitoring and diagnostics system that provides continuous on board monitoring and diagnostics of engine health, gearbox and drive train vibrations, oil debris, rotor track and balance, and crash protected Cockpit Voice and Flight Data recorder (CVFDR). CVFDR, an integral part of the IMD system, will perform the required function of a Flight Incident Recorder (FIR). An Early Operational Assessment (EOA) of a Commercial Off-the-Shelf system on two CH-53E's occurred FY96-98. Lessons learned from this effort were incorporated into the solicitation for the fleet wide IMD effort of which the H-53E is the lead platform.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The CH-53E IMDS successfully completed operational evaluation (OPEVAL) in October 2005. The Milestone Decision Authority approved full-rate production for CH-53E IMDS in December 2004. FY04-05 quantities are on contract and previously delivered kits are being installed as aircraft become available.

Exhibit P-3a

MODIFICATION TITLE: NACELLES(OSIP 009-01)
 MODELS OF SYSTEMS AFFECTED: CH-53E (148), MH-53E (32) TYPE MODIFICATION: MISSION/MISSION ENHANCEMENT

DESCRIPTION / JUSTIFICATION: This modification provides improvements to the engine nacelles which are intended to decrease the maintenance man-hours expended on nacelles repair and replacement. This modification will incorporate the forward and aft engine nacelles for the CH-53E and MH-53E.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Contract awarded 2nd Qtr. FY 02. O-Level Validation/Verification was completed May 03. All installations are O-Level. Material quality defects were discovered in the first production lot. Technical data package was studied by the OEM. Contract award is planned in Aug 06 for Non-Recurring Engineering, Tooling and Val/Ver kits. Production delayed until FY07.

Exhibit P-3a

MODIFICATION TITLE: H-53 INTERIOR BALLISTIC ARMOR(OSIP 021-03)

MODELS OF SYSTEMS AFFECTED: CH-53D (37), CH-53E (148), MH-53E (32), 217 Total TYPE MODIFICATION: MISSION/PERFORMANCE ENHANCEMENT

DESCRIPTION / JUSTIFICATION: Ballistic Protection System (BPS) provides increased protection and survivability for H-53 aircrew and passengers against small arms and anti-aircraft fragmentation type threats. BPS is a mission kit of protective armor panels secured to the cockpit and cargo compartment floor and to the sidewall area around the gunners' doors. Standardization Kits are First Article production kits used to verify subsequent Ballistic Armor Production Runs.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The BPS is estimated to complete production for the CH-53E, CH-53D, and MH-53E in Aug 06. Every H-53 will receive installation provisions (A-Kit), and an armor panel set (D-Kit) will go to approximately half of the aircrafts. The BPS can be quickly moved from aircraft to aircraft according to mission needs once the A-Kit has been installed.

Exhibit P-3a

MODIFICATION TITLE: H-53 ERIP(OSIP 010-05)

MODELS OF SYSTEMS AFFECTED: H-53 T64 Turbo-shaft engines (462) TYPE MODIFICATION: SAFETY, READINESS AND MAINTAINABILITY

DESCRIPTION / JUSTIFICATION: The T64 Engine reliability Improvement Program upgrades top age related engine degraders, fatigue limiters, and performance degradation on the T64 engine. A concentrated effort is to upgrade the T64-416 engines to the T64-416A configuration by replacing components of the engine with improved hardware designs to increase reliability and reduce logistical requirements by conforming to one configuration. Other efforts are to improve age related components such as torques measuring gauges and thermocouples that have become obsolescent. The T-64 Engine Air Particle Separator (EAPS) 360 Degree Seal effort will modify MH-53E and CH-53D aircraft to incorporate improved seals between the engine and the EAPS system to reduce the amount of particulate matter that bypasses the EAPS and enters the engine airstream. The current EAPS seal does not provide adequate protection in all operating environments. The improved EAPS seal is expected to eliminate the current sealing issues.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: 462 engines remain to be upgraded from -416 to -416A. The -416A upgrade kit development was previously completed. Only procurement of the -416A upgrade kits is required under this OSIP. Kits procured with FY04 Title IX Supplemental funding began installs in FY05. A full rate production decision for the CH-53E EAPS seal is expected by the end of March 2007. The improved CH-53E EAPS seal design will be compatible with the MH-53E and CH-53D. Development of an EAPS barrel change for the CH-53D is needed for incorporation of the change.

Exhibit P-3a

MODIFICATION TITLE: H-53 AMARC(OSIP 012-05)

MODELS OF SYSTEMS AFFECTED: CH-53E (147) TYPE MODIFICATION: SAFETY, READINESS AND MAINTAINABILITY

DESCRIPTION / JUSTIFICATION: The Aerospace Maintenance & Regeneration Center (AMARC) will support the restoration of five CH-53E helicopters from long-term preservation and storage into the active inventory. The Weapon System Planning Document (WSPD) reflects a requirement for 153 CH-53E Primary Aircraft Authorized (PAA). Due to combat related losses and mishaps during the GWOT, there are currently 148 PAA aircraft. To get back to the WSPD requirement, the USMC must remove five aircraft from war reserve storage at AMARC and return them to active status. This OSIP includes (1) preparation for the aircraft to come out of AMARC, (2) bringing aircraft to a fleet representative condition with all currently installed modifications, (3) replacement of obsolete items (swashplate, tail rotor head, etc.), (4) replacement of all parts that have deteriorated beyond use during storage (tires, fuel lines, etc.), (5) transportation to NADEP Cherry Point, and (6) putting the aircraft through SDLM. Supplemental funding was sufficient for three kits only. FY06 supplemental was received for two additional kits.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: BUNO 161532 was inducted into SDLM in Aug 2005 and scheduled to be delivered to the fleet in Jan 2007. BUNOs 161539 and 161542 were inducted into SDLM in Sep 2005 and are scheduled to be delivered to the fleet in Feb 2007. Aircraft #s 4 and 5 will be inducted into SDLM in Sept 2006 and are scheduled to be delivered to the fleet in Oct 2007. Aircraft #s 6 and 7 are planned to be inducted into SDLM in May 2007 and delivered to the fleet 15 months after induction.

MODIFICATION TITLE: H-53 MEDIVAC(OSIP 015-05)

MODELS OF SYSTEMS AFFECTED: CH-53D (37), CH-53E (148), MH-53E (32), 217 Total TYPE MODIFICATION: SAFETY, READINESS AND MAINTAINABILITY

DESCRIPTION / JUSTIFICATION: This funding effort is established for procurement and integration of survivability systems that will improve H53 aircrew and passengers against hostile threats through more effective self-defense methods. The H53 survivability strategy is to upgrade threat detection ability, increase countermeasure capability, reduce vulnerability, enhance situational awareness by communicating aircraft position to deconflict with friendly forces in the AO, and improve vulnerability to battle damage by better developing protect for both the aircrew and critical components. This increased survivability will protect the H-53 during all aspects of its various missions; assault support, shipboard delivery of cargo, anti-mine warfare, casualty transport/Medivac, and heavy cargo transport.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Phase I effort (8 aircraft) complete in November 2005. Blue Force Tracker effort will be complete in July 2006. Fully equipped aircraft deployment scheduled for February 2006. Phase II effort (8 aircraft) estimated completion date December 2006.

Notes:

1. ALE-47 kits procured in FY05 with supplemental funds will be installed in FY06. Installations are funded with FY05 supplemental funds.
2. PMA-299 funded 6 ALE-47 installations in FY06.
3. Kits procured in FY06 with supplemental funds will be installed in FY07.

MODIFICATION TITLE: H-53 A/C SUSTAINMENT(OSIP 008-06)

MODELS OF SYSTEMS AFFECTED: CH-53D (37), CH-53E (148), MH-53E (32), 217 Total TYPE MODIFICATION: MISSION/PERFORMANCE SUSTAINMENT

DESCRIPTION / JUSTIFICATION: The H-53 Aircraft are included in the Naval Aviation Plan to support Sea Power 21 through CY 2020. The H-53 Aircraft Sustainment Strategy targets initiatives to remedy the top age-related maintenance degraders, fatigue life limiters, and safety issues that impede the aircraft's ability to operate into the future. This program implements a concentrated effort to utilize improvements to the H-53 component obsolescence (e.g. Engine Air Particle Separator (EAPS) redesign), structural limitations (e.g. transition bulkhead and station 820 structural improvement), aircrew safety systems and program sustainment support. This effort will sustain the H-53 legacy fleet in an affordable manner until the H-53 follow-on aircraft becomes available.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The H-53 Sustainment Program Acquisition Strategy was approved by PEO(A) in March 2006, to be executed as four Abbreviated Acquisition Programs (AAPs) for (1) Fatigue, (2) Obsolescence, (3) Readiness, and (4) Safety. Each AAP consists of several independent projects, each of which has an independent platform effectivity, acquisition strategy, production lead time, production rate and quantity, and installation approach. Thus, they are not amenable to a "block upgrade" type approach. Each year of the program will involve non-recurring engineering (NRE) on some projects, leading to production and installation in out-years. Other projects require little or no NRE and can be acquired and installed quickly during maintenance.

Exhibit P-3a

MODIFICATION TITLE: H-53 CNS/ATM(OSIP 016-07)

MODELS OF SYSTEMS AFFECTED: CH-53E (148), MH-53E (32) TYPE MODIFICATION: MISSION/PERFORMANCE SUSTAINMENT

DESCRIPTION / JUSTIFICATION: Under the CNS/ATM upgrade program Common Avionics is providing a variant of the Army Common Avionics Architecture System (CAAS) to enable full compliance with CNS/ATM Functional Requirements. The cockpit design of the H-53 will be drastically altered bringing a glass cockpit system to the In-Service CH-53E and MH-53E fleet. The limitation of the system design provided was that it failed to remove many legacy gauges and equipment (Primarily engine instruments and hydraulics) which were not directly impacted by CNS/ATM functionality. This limited the cockpit to 4 displays as opposed to the Army 5 display configuration and created a more difficult and safety concerned flight environment forcing the pilot to fly both glass displays and traditional gauges simultaneously. The NRE provided will allow all of the engine instruments and hydraulics to be removed and hosted under glass and allow a 5th display to be incorporated into the system design. The 5th display offers significantly enhanced tactical and mission performance improvements by allowing a pilot to display moving map or blue force data on a center display while still maintaining all primary flight and navigation information on the main displays. Gains in aircraft capability will be in mission performance, tactical situational awareness, and safety. Production tail and recurring costs will be funded through Common Avionics.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: SRR Completed July 2006, Jan 30 - 01 Feb 2007 Preliminary Design Review, Jun 2007 Critical Design Review.

MODIFICATION TITLE: DIRCM(OSIP 010-08)

MODELS OF SYSTEMS AFFECTED: CH-53E (148) TYPE MODIFICATION: SURVIVABILITY

DESCRIPTION / JUSTIFICATION: Currently, the H-53E has only IR detection equipment and rudimentary flares for use as CM. This funding is for ECP development, A-kit procurement and installation of a DIRCM system for CH-53Es. This system will help protect the CH-53E which is highly susceptible to IR seeking manpads, the weapon of choice in all current theaters. This system has been found effective against fourth generation IR manpads, and is extremely effective against the most-common first generation manpads. PMA-272 is procuring the P-kits.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: N/A. ECP development, A-kit procurement and installation doesn't begin until FY08.

DESCRIPTION: This line item funds modifications to H-60 series aircraft. The H-60 series program of record is comprised of: 38 HH-60H, 145 SH-60B, 72 SH-60F, 149 MH-60S, 46 MH-60R. The HH-60H is a Combat Search and Rescue (CSAR) and Special Warfare Support (SWS) helicopter assigned to carrier airwings aboard CVs and also in two reserve squadrons. The primary missions of the SH-60B are Anti-Submarine (ASW) and Surface Warfare (SUW). The SH-60F is an ASW, dipping sonar helicopter assigned to carrier airwings based aboard aircraft carriers (CV). The SH-60F primary mission is protection of the CV inner zone. The MH-60S is the Fleet Combat Support (HC) Helicopter. The primary missions of the MH-60S are Vertical Replenishment (VERTREP), Search and Rescue (SAR), Organic AMCM (OAMCM), Surface Warfare (SUW), Extended Maritime Interdiction Operations (EMIO), and Navy Organic Combat Search and Rescue (CSAR). The MH-60R is the Multi-Mission Helicopter. The primary missions of the MH-60R are Under Sea Warfare (USW) and Surface Warfare (SUW). The overall goal of the modifications budgeted is for the Integrated Mechanical Diagnostic System (IMDS), Safety Related Systems Upgrade, AMCM/Armed Helo (Correction of Deficiencies) for the MH-60S, Air Ambulance, SH-60F High Strength Sonar Cable, Armed Block I Upgrade for the MH-60R, SH-60B Drug Interdiction Forward Looking Infrared (FLIR), H-60 Helicopter Visit, Board, Search, and Seizure (HVBSS), MH-60S Warfighting Capability, and Automatic Radar Periscope Detection Discrimination (ARPDD). The specific modifications budgeted and programmed are:

MODIFICATION TITLE: HEL0 INTG MECH DIAGN(OSIP 017-00)

MODELS OF SYSTEMS AFFECTED: SH-60B, SH-60F, HH-60H, MH-60R, MH-60S TYPE MODIFICATION: OPERATIONAL ENHANCEMENT/SAFETY

DESCRIPTION / JUSTIFICATION: Integrated Mechanical Diagnostic System (IMDS) is a helicopter monitoring and diagnostic systems that provides continuous onboard monitoring and diagnostic of engine health, gearbox, drive train vibrations, oil debris, and rotor track and balance. The IMD system also includes a Cockpit Voice Recorder and Flight Data Recorder (CVR/FDR) capability.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Revised Acquisition Strategy from lease concept to procurement; approved by PEO (A) December 1999. IMD Development Testing (DT) started on the SH-60B at Rotary Wing January 2000. Limited LRIP decision April 2001, for hardware based on DT-IIA. Software DT-IB completed November 2002. DT-IC completed December 2003. Inventory included 1 HH-60H that was rebuilt at Trov. AL 2 SH-60B were designated NSH-60B. and 1 additional SH-60F aircraft designated YSH-60F.

MODIFICATION TITLE: SAFETY RELATED SYSTEM UPGRADE(OSIP 009-03)
 MODELS OF SYSTEMS AFFECTED: SH-60B, SH-60F, HH-60H, MH-60R, MH-60S TYPE MODIFICATION: OPERATIONAL ENHANCEMENT

DESCRIPTION / JUSTIFICATION: (ALL TMS): Safety Related Systems Upgrade funds modifications to improve the safety of operating H-60 Series aircraft in all operations. T700 Engine Safety Improvements (New White Harness) funds ECPs to provide encapsulated (waterproof) engine wire harness. In addition, troubleshoots T700 Engine problems unique to H-60 community and find fixes. The New White Harness will be installed two (2) per aircraft. Wide Field of Vision (FOV) Night Vision Device increases nighttime situational awareness and improving safety-of-forces.

DESCRIPTION / JUSTIFICATION (SH-60B, SH-60F, HH-60H): Stabilator Control System Redesign solved problems of uncommanded runaway without caution alerts. H-60 Lighted RAST Probe provides a luminescent messenger cable. Fast Tactical Imaging (FTI) Terminals and Imaging and Communications Environment (ICE) software allow H-60 H/B aircraft to link imagery and target data with Carrier Strike Group and Joint Special Operations forces, increasing battlefield situational awareness, improving safety-of-forces, and enhancing precision strike capability in close-air-support of Special Warfare forces. GAU-17 Weapon Assembly Mod funds (15) A-kits for HH-60H aircraft.

DESCRIPTION / JUSTIFICATION (MH-60S, MH60R): - The Ground Proximity Warning System (GPWS) will be a software-based system that takes existing aircraft data and calculates a recovery profile to the above ground altitude of the aircraft. If the recovery profile (plus a suitable buffer) intercepts this ground height, GPWS will generate a warning to the pilot. Other means of generating a warning may also be used to ensure maximum detection with minimum nuisance cues. The retrofit plan for systems to be modified as follows: MH-60S 74.

METHOD OF IMPLEMENTATION: New White Harness, Fast Tactical Imaging are "O" Level Installs.

MODIFICATION TITLE: MH-60S AMCM/ARMED HELO(OSIP 016-04)

MODELS OF SYSTEMS AFFECTED: MH-60S TYPE MODIFICATION: OPERATIONAL ENHANCEMENT

DESCRIPTION / JUSTIFICATION: Based on Developmental and Operational testing, Fleet aircraft require modifications to correct identified deficiencies incorporated in production aircraft. These modifications include corrections to Common Cockpit Avionics, Auxiliary Fuel System, High Maintenance Battery, Search and Rescue Equipment, Rotor System and Airframe, Night Vision Device Exterior Lighting and AMCM Mission Equipment. Current retrofit plan is as follows: The Aux Tank A kit will be retrofit on 50 aircraft. Aux Tank B kits (two tanks per kit) and AMCM Mission Equipment are not procured on a one for one basis with the A kit modifications. No install required. The Bifilar B Kit and Ultra Low Maintenance Battery will be retrofit as an "O" Level install on 50 aircraft. Night Vision Device Capable Aircraft Lighting will be retrofit on 119 Aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The MH-60S aircraft completed OPEVAL in Mar 2002; MS III was completed 12 Aug 2002. The validation of the Aux Tank capability was completed in the second quarter of FY 2005.

Exhibit P-3a

MODIFICATION TITLE: HIGH STRENGTH SONAR CABLE SH-60F(OSIP 017-05)

MODELS OF SYSTEMS AFFECTED: SH-60F TYPE MODIFICATION: OPERATIONAL ENHANCEMENT

DESCRIPTION / JUSTIFICATION: This new start program will permit retrofit of the more reliable and capable High Strength Sonar Cable. The intent of this program change is to fully fund improved AQS-13F sonar cables across the SH-60F helicopter fleet which will be in service through 2015. To date, the United States Navy (USN) has experienced 40 AN/AQS-13F sonar mishaps at not only a \$17.6M total cost but also with a significant impact to aircrew safety and readiness. With the AQS-13F, a dipped helicopter sonar, the common causal factor in mishaps has been tensile overstress leading to sonar cable breakage and loss of the AQS-13F transducer. The material solution to mitigate AQS-13F transducer loss lies in strengthening the sonar cable. An improved AQS-13F sonar cable, incorporating an MP-35 strength member, has been designed and has demonstrated a 60% increase in tensile strength and will result in dramatically increased ASW readiness resulting from operational restrictions to be placed on its use. FY2005 High Strength Sonar Cable Install Equipment unit costs are lower to account for 35 Sonar Cables already in inventory; inventory cables only require sheathing.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: No development required.

MODIFICATION TITLE: MH-60R ARMED BLOCK I UPGRADE(OSIP 001-06)

MODELS OF SYSTEMS AFFECTED: MH-60R TYPE MODIFICATION: OPERATIONAL ENHANCEMENT

DESCRIPTION / JUSTIFICATION: This line item funds modifications to the MH-60R series aircraft. The modifications are part of the P3I effort that includes GPS SAASM, KUBAND, IMDS, AVC, ACOUSTIC PROCESSOR, and LINK-16. Global Positioning System (GPS) upgrade includes Selective Availability Anti-Spoofing Module (SAASM) and GAS-1 antenna upgrade. SAASM is a set of functional security requirements used to design and build a secure GPS receiver. Use of GPS SAASM security architecture significantly enhances the pilot's ability to use the GPS Precise Positioning, velocity, time, and other GPS sensor information in all environments. GAS-1 antenna upgrade to the GPS system improves susceptibility performance. Current GPS retrofit plan reflects: (5) LRIP I,(4) LRIP II, and (6) LRIP III MH-60R aircraft. Link 16 supports the exchange of C4I data that is required to operate in a Joint and NATO Battlespace. Link 16 is designed to support the exchange of formatted data messages rather than the "raw" data exchange that the existing C-Band Hawklink and Tactical Common Data Link (TCDL), now KUBAND, will support. KUBAND is an update to the current C-Band Hawklink that allows for an increase in bandwidth with the ability to transfer additional data. It is compliant with the Assistant Secretary of Defense C3I Letter dated 18 October 2004 directing commonality and interoperability between all DOD airborne sensor platforms and meets the mandate for a common standard for transmission of unprocessed sensor information. The Integrated Mechanical Diagnostic System (IMDS) will improve aircraft performance and vibration parameters in flight. GPS SAASM, Link 16, KUBAND and IMDS are a part of the MH-60R Block Upgrades as specified in the evolutionary acquisition strategy for the program. The Acoustic Subsystem is a key component to meeting H60R ASW mission requirements. This OSIP includes updates to obsolete components of the Acoustic Subsystem. Sonar Transducer Receiver (ST/R) will modified to solve obsolescence issues; ST/R is "O" Level install.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: SAASM Joint Common System (JCS) Instruction CDCSI 6140.01, issued 15 November 1998, mandates that all Precise Position Systems (i.e. Global Positioning System (GPS) used on the MH-60R) users field SAASM-based user equipment and use black keys after 01 October 2002.

Exhibit P-3a

MODIFICATION TITLE: H-60 HVBSS(OSIP 008-07)

MODELS OF SYSTEMS AFFECTED: SH-60B, HH-60H TYPE MODIFICATION: OPERATIONAL ENHANCEMENT

DESCRIPTION / JUSTIFICATION: Extended Maritime Interdiction Operations (EMIO) by Helicopter Visit, Board, Search, and Seizure (HVBS) tactics require Naval Helicopters be compatible with rapid insertion of Special Warfare forces. This OSIP adds hardpoints to the overhead cabin structure for improved special warfare seating and cabin configurations for (72) SH-60B aircraft by Depot level modification. Modification by O-level to access existing aircraft hardpoints for mounting of Fastrope Rapid Insertion Extraction System (FRIES) hardware will also be conducted for all (145) SH-60B aircraft. Fast Tactical imaging systems kits (20), which includes embedded Automated Identification System capability, will be procured for improved battlefield situational awareness for Command and Direct Action elements. Close Air Support improvements for accompanying assault SH-60B and HH-60H helicopters include (180) M240 7.62mm machine gun kits, replacing aging M-60D gun systems. Additional area suppression close air support improvements include (22) GAU-17 weapon kits and (22) corresponding depot level airframe modifications to integrate the GAU-17 into the remaining HH-60H aircraft. Precise weapon aiming required to employ crew-served weapons in close quarters require the coincident procurement of (42) aiming laser systems to kit with each weapon.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: GAU-17/A, M-240D, Fast Tactical Imaging (FTI) SYSTEMS, IZLID-200 aiming laser, FRIES are systems integrated on other H-60 helicopter platforms and are off-the-shelf procurements. Lead time for all systems 30-90 days. TD for HH-60H modifications (AAC 993) signed 30 June 1994. AFC for O-level and D-level mods for SH-60B require 3-month development including prototyping.

DESCRIPTION: There are 84 H-1N's in the UH configuration and 11 H-1N's in the HH configuration for a total of 95. The UH-1N provides command and control and combat assault support under day/night and adverse weather conditions. Additional UH-1N missions include special operations support, controls/coordination/guidance of supporting fire and aeromedical evacuation. The overall goal of the modifications budgeted in FY2008 is to eliminate safety hazards, remedy obsolescence and maintain significant mission capability until the planned retirement date. The HH configured aircraft provide local civilian and military search and rescue support, as well as augmenting Department of Homeland Security resources. Additionally, the UH-1Y will upgrade the current Navigational Thermal Imaging System (NTIS) starting in FY09.

Exhibit P-3a

MODIFICATION TITLE: UH-1 NTIS(OSIP 031-92)

MODELS OF SYSTEMS AFFECTED: UH-1N/UH-1Y, ASSOCIATED TRAINERS AND LABS TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Operational Requirements Document (ORD) AAS-51 states that the UH-1N requires a Navigational Thermal Imaging System (NTIS) to provide the U.S. Marine Corps with a night/day warfighting capability in the NOE/smoke/dust/haze environment. This capability reduces the safety risk by allowing the aircrew to see and avoid flight obstructions and locate targets that might not be visible with the naked eye or night vision goggles. The AN/AAQ-22 is a low cost, stabilized system which provides the required capability in the form of high quality real time imagery displayed into the UH-1N aircraft cockpit. The NTIS System is comprised of 5 components; Turret FLIR Unit (TFU), Central Electronics Units (CEU), Hand Control Unit (HCU), Thermal Image Recorder (TIR), and the Video Display Unit (VDU). The NTIS is installed only in the UH-1N aircraft by AFC-278. The system also includes a Laser Range Finder (LRF) to determine the range to landmarks, targets, and tactical points of interest. Beginning FY97, the NTIS was upgraded from 1st generation to 3rd generation Forward Looking Infrared (FLIR) technology. The COTS Star SAFIRE modification consisted of a 3-5 micron focal plane array detector, an eye safe LRF and new optics. Additionally, the NTIS will be upgraded with a new Thermal Imaging Recorder (TIR) with mount and a Flat Panel Display replacement for the VDU due to a fire hazard. Additional modifications to the NTIS are being incorporated in order to add a COTS Laser Designator/Laser Pointer capability (BRITE Star VII). Laser designator capability is a threshold ORD requirement. BRITE Star VII "P" Kits are "O" level installed mission kits. Additional reliability and maintenance upgrades to the NTIS components and VDU will also be incorporated. BRITE Star Block II integration in to the UH-1Y will start in FY08.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The NTIS is a commercial off-the-shelf (COTS) item. MIL-STD-810C testing is complete. DT-III testing was completed in the fourth quarter FY94 and FOT&E was completed in the second quarter of FY96. Additional testing occurred during fourth quarter FY98 for NTIS upgrade. The completion of COTS post Milestone II testing of Laser Designator (BRITE Star) completed in FY03. Initial fielding of BRITE Star I FY04 and continues in FY06. BRITE Star II development completes in FY06/FY07, Test FY06 fielding schedule for FY07/FY08.

MODIFICATION TITLE: H-1N SAFETY UPGRADES(OSIP 018-98)

MODELS OF SYSTEMS AFFECTED: HH-1N/UH-1N TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Operational Requirements Document (ORD) AAS-51 requires that the following safety shortfalls be corrected. The HH/UH-1N helicopter fleet was designed in the 1960's, introduced in the 1970's and are projected to remain in the Department of the Navy inventory until FY2020. This program is designed to address safety issues, such as mishap casual factors associated with maintaining an older type model series aircraft. This safety upgrade program replaced the Tail Drive System (TDS). A COTS/NDI Improved Torque Indicator System will be added to provide a digital torque display to the aircrew to improve low power margin situational awareness. Tailboom Strake technology will be investigated to improve performance and reduce tailboom fatigue. Additionally, the overspeed Aural Alert Unit (AAU) will be modified. A modification to the CH-8500 Vibration Analysis Support Equipment (VASE) will also be needed. A COTS replacement Rotor Brake Quill (RBQ) assembly, component failures due to an obsolete design pose a significant risk to all aircrew, and Low Maintenance Battery (LMB) will be incorporated into all HH/UH-1N aircraft. Included in this OSIP is the requirement to correct the safety deficiencies of the Defensive Amament System (DAS); machine guns, carriages, mounts, and associated equipment. Improvements and enhancements to airframe Night Vision Goggle (NVG) compatability along with communications equipment for external agency interaction during the Global War on Terrorism. A/C fatigue life issues including movement of critical controls, Heads Up Display (HUD)'s CDNU and GPS Upgrades (CCP) (radio select, etc.). Implementation of improved armor technologies including, but not limited to, transparent armor and armored panels, damage tolerant windscreen tech's, reduce maintenance efforts (such as scratch resistant covers, damaged tolerant windscreens and tear-a-way covers, etc.) and mid-air collision avoidance systems will also be accomplished and crew weapons mounts.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: These upgrades are proprietary, non-developmental items used in other BHTI produced military and FAA certified commercial helicopters.

DESCRIPTION: This line item funds modifications to the EP-3E aircraft. The EP-3E is a land based, long range aircraft, with electronic intercept devices for detection and tracking of enemy RADARs and radios.

The Spiral 1 kit improves operational capability and aircrew productivity by expanding the ESM frequency coverage, applying state-of-the-art signal exploitation/processing/display techniques, expanding direction finding (DF) frequency coverage, off-board classified communication, and expanding special signal processing capability. Spiral 2 kit provides for improved information fusion/decision-making capabilities. Spiral 3 procurement begins in FY10 with Low Band Communication System Upgrades, Environmental Control System (ECS) Upgrades and the replacement of aging and obsolescence aircraft antenna arrays. FY2007-FY2013 includes ECO funding to replace subsystem obsolescence to ensure EP-3E viability until aircraft recapitalization. FY2010-FY2013 continues funding of the Quick Response Capabilities (QRCs) ability to respond to emerging threats. FY09-FY10 procures capabilities to ensure EP-3E relevance beyond FY17 and procures follow-on capabilities to be migrated to the recap platform.

Research and Development is funded with National Security Agency (NSA) Military Intelligence Program (MIP) funds. This OSIP provides the procurement tail for RDT&E funds from the Navy's Advanced Signal Recognition line (PE 0305206N). The NSA RDT&E line for the Navy Airborne Sensor System Improvements funds sensor improvements with application for the EP-3E. MIP RDT&E funds are responsible for the development and acquisition of EP-3E sensors, data links, data relays and ground stations to achieve and maintain interoperability with Defense-wide airborne reconnaissance assets. Active PAA inventory is 12 with a BAA inventory of 4 for a total of 16 aircraft with the completion of OSIP 29-00. Funds budgeted in FY2008-FY2013 are to continue Joint Airborne SIGINT Architecture (JASA) Modification Common Configuration Program (JMOD). The EP-3E has an average service life of 29.5 years. The EP-3E service life will be managed through Special Structural Inspection - Kits (SSI-Ks) in the P3 Series Modification program (OSIP 005-05) and QRC/ECO/Obsolescence ECP funding in this OSIP.

Exhibit P-3a

MODIFICATION TITLE: JSAF MODIFICATION (JMOD) (OSIP 011-01)MODELS OF SYSTEMS AFFECTED: EP-3E TYPE MODIFICATION: Operational Improvement/Modernization

DESCRIPTION / JUSTIFICATION: The EP-3E JASA Modification (JMOD) Program began as an upgrade to the capabilities of the Sensor System Improvement Program (SSIP) configuration of the EP-3E. This OSIP responds to Operational Requirement Document (ORD) #571-78-01 and the CAPSTONE ORD (CAF-002-88). JMOD was designed as an evolutionary acquisition program consisting of three block mods. MOD 1 updated the EP-3E infrastructure, improved auto-ESM with the Story Finder system, incorporated Joint Signal Processor (JSP), incorporated SSIP corrections, and incorporated Quick Response Capabilities (QRC) (including the SINGGAR upgrade and IR Stobes modifications) into JMOD. MOD 2 was planned to incorporate a low band capability which improves special collection capability and add the Common Data Link (CDL) allowing the EP-3E to serve as a network-centric airborne SIGINT collection element capable of sharing data with ground, air, and ship-based operators. MOD 3 would have incorporated precision targeting. The Baseline Update to MOD 1 was required to ensure the JMOD TKI aircraft had the same baseline configuration and capabilities as SSIP and QRC fleet assets. The twelve EP-3E aircraft (PAA) will be managed through Special Structural Inspections (SSIs) beyond JMOD Baseline Full Operational Capability (FOC).

Beginning in FY03 and continuing through FY07, the EP-3E platform received funding for COMINT/ELINT upgrades. The FY05-FY07 COMINT/ELINT upgrades funding has been incorporated into the JMOD Baseline.

In FY05, the JMOD Baseline was restructured from the original JMOD program that brings all EP-3E platforms into a single configuration (JMOD Common Configuration (JCC)) on an accelerated timetable. JCC Baseline incorporates 60% of JMOD 1 components into the existing EP-3E backbone and accelerates critical elements of JMOD 2 and 3 via spirals. JMOD Baseline also includes various Quick Reaction Capabilities and OEF/OIF installs and addresses mission avionics obsolescence. This OSIP was restructured to fund the acceleration of JMOD 2 and JMOD 3 capabilities by three years by incorporating their capabilities into the ForceNet and Sea Strike spirals. ForceNet capabilities were procured via Spiral 1 in FY05 and FY06. Sea Strike capabilities were procured via Spiral 2 in FY06 and continuing in FY07. The final Spiral 2 kit will be procured in FY10. FY04 funding procured existing backbone required to bring the five conversion aircraft to the configuration necessary to receive JMOD Baseline. This OSIP addresses a PAA of 12 EP-3E aircraft. The QRC funds in FY09 through FY11 address mission avionics system obsolescence and emerging requirements from national and theater commanders in response to rapidly evolving Global War On Terrorism (GWOT) threats.

In FY06 the JCC program was further restructured due to delays in the Aerial Common Sensor (ACS) recapitalization program. The restructure added anobsolescence evolution and a JCC Spiral 3 upgrade to maintain EP-3E mission system viability until recapitalization platform can be fielded (est. 2017 IOC, 2019 FOC). This funding supports the required procurement of the restructured JCC program. This program procures Low Rate Initial Production (LRIP) Spiral 2 in FY08 with full rate procurement to start in FY09. Spiral 3 procurement includes signal exploitation, low-band direction finding, Remote Tuning Receivers, Integrated Information Operations (I/O) and Environment Control System (ECS) upgrades. Low Rate Initial Production (LRIP) for Spiral 3 in FY10 with full rate procurement to start in FY11. Obsolescence, Quick Response Capabilities (QRCs) and technical refresh efforts will be accomplished in conjunction with the above JCC Spiral upgrades to sustain EP-3E capabilities and viability until recapitalization/replacement.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Increment 1 (the JMOD baseline configuration) Milestone III decision occurred 4th Qtr FY04 based on completion of OT, demonstration of Key Performance Parameters (KPP's) and a DT Assist on the Story Finder subsystem. The ForceNet Spiral 1 LRIP decision was approved as planned on 06 June 2005 based on successful completion of its Design Readiness Reviews (DRR) and applicable contractor aircraft flight tests. Spiral 1 completed OT 2nd Qtr of FY06 with the associated Full Rate Production decision and contract award scheduled for the 3rd Qtr of FY06. Spiral 2 Engineering Development efforts are underway with its associated LRIP decision planned for 4th Qtr in FY07 and associated contract award planned for the 1st Qtr in FY08. Spiral 2 OT is planned for 3rd Qtr of FY08 with its associated Full Rate Production decision in the 4th Qtr of FY08 and associated contract award planned for the 1st Qtr of FY09. Spiral 3 efforts will begin with LRIP procurement in FY2010.

- Two JMOD 1 kits were funded under the Conversion OSIP (29-00) and one JMOD 1 kit was funded as a R&D TKI.
- FY10 through FY13 QRC quantities vary due to emergent threat requirements.
- FY07 through FY13 Installation cost include various ECO that are not part of JCC Spiral install costs.
- FY05 JMOD Common quantity of 4 shown are JCC Spiral 1 LRIP assets procured under JMOD Common line.
- FY09 NRE increase for significant SP3 tooling/setup of install kits and equipment manufacturing.
- FY10 increase to support logistic, training, and support equipment for SP3 procurement.

BUDGET ITEM JUSTIFICATION SHEET											DATE:	
P-40											February 2007	
APPROPRIATION/BUDGET ACTIVITY							P-1 ITEM NOMENCLATURE					
Aircraft Procurement, Navy / APN5 Aircraft Modifications							053800, P-3 SERIES					
Program Element for Code B Items:							Other Related Program Elements					
	PRIOR YEARS	ID Code	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL
QUANTITY												
COST (In Millions)	2581.7	A	193.5	263.9	262.6	289.9	233.1	135.3	125.5	113.9	152.2	4351.1

DESCRIPTION: This line item funds modifications to P-3 aircraft. The P-3 Orion is a 4 engine, long-range maritime surveillance aircraft which performs Under Sea Warfare (USW), Surface Warfare (SUW) and Intelligence, Surveillance and Reconnaissance (ISR) in support of battle group and littoral operations in direct support of Sea Shield and Forcenet pillars of Seapower 21.

As a direct result of the 7 June 2003 Maritime Patrol and Reconnaissance (MPRA) offsite, the P-3 Sustainment Bridge was approved by the CNO. This resulted in P-3C inventory levels being reduced from 227 to 148. The foundational element of this bridge was optimizing the P-3 fleet by investing manpower, AVDLR and Flying Hour Program (FHP) savings into the resulting smaller P-3 force to produce a better productive ratio of aircraft. This investment allows the P-3 force to be smaller, more ready and more capable. A key investment area is P-3 Mod Programs. Funding for these programs support a multitude of obsolescence, structural, sustainment, training/logistics and warfighting capability upgrades that are key in keeping the P-3 platform relevant through Multi-mission Maritime Aircraft (MMA) Initial Operational Capability (IOC) of 2013 and until the projected MMA Full Operational Capability (FOC) of 2019. P-3 aircraft mods funded under the APN line have heavily supported recent and current Operation Enduring Freedom (OEF), Operation Iraqi Freedom (OIF) and Global War on Terrorism (GWOT) operations. Without key technology upgrades and aggressive obsolescence management, P-3 aircraft will be unable to meet Fleet Response Plan (FRP) requirements, leaving key Seapower 21 capabilities in support of the Combatant Commanders at risk. This P-3 Sustainment Bridge provides a roadmap through MMA FOC, ensuring sufficient P-3 assets for Fleet and Combatant Commanders to fulfill operational and training/readiness requirements.

The overall goal of the modifications budgeted in FY2008 is to continue mission system sustainment, including: USQ-78 improvements (part of Update III), comm/nav/surveillance weapon system improvements, upgrades/modifications to airframe components/systems, safety improvements and key system obsolescence upgrades. The specific modifications budgeted and programmed are:

Exhibit P-3a

MODIFICATION TITLE: UPDT III BLK UPRDE(OSIP 080-84)
 MODELS OF SYSTEMS AFFECTED: P-3C TYPE MODIFICATION: Operational Improvement

DESCRIPTION / JUSTIFICATION: The Update III Block Upgrade program provides an improved P-3 anti-submarine warfare (ASW) capability required to neutralize current and emerging littoral and open ocean submarine threats in support of Sea Shield/Sea Power 21. The program initially establishes a common configuration of AN/USQ-78(V) acoustic processors, acoustic data recorders, sonobuoy receivers, and other acoustic subsystem components for all P-3C Mission Aircraft. Follow-on program efforts continuously modernize this common acoustic subsystem baseline to address COTS component obsolescence, accomplish periodic COTS technology insertions, and provide functional improvements via an Air Acoustic Rapid COTS Insertion (Air ARCI) process. These common configuration efforts and follow-on technology insertion efforts are accomplished with AN/USQ-78(V) upgrade funding and with follow-on P-3C ASW Maritime Improvement Program (AMIP) funding.

FY08 thru FY13 objectives of the Update III Block Upgrade Program are to provide improved ASW capability through a series of AMIP Technology Insertions which will: (1) increase digital sonobuoy monitoring capacity and improve acoustic subsystem maintainability by replacing the analog ARR-78 sonobuoy receiver with a digital Software Defined Sonobuoy Receiver (SDSR); (2) increase system openness by eliminating the analog signal conditioning and MIL-unique interface cards; (3) increase processing growth to meet emerging under-sea threats and Fleet ASW requirements for multi-static acoustic sensor processing (e.g., Extended Echo Ranging [EER] family), active acoustic sensor processing (e.g., DICASS) and passive acoustic sensor processing (e.g., ADR, DIFAR) by incrementally upgrading system memory and processing capacity with the latest commercial variants of COTS single board computers and digital signal processors; (4) provide additional on going non-recurring engineering (NRE) solutions to support continuous technology insertions and COTS obsolescence mitigation on a regular cycle via an ARCI Tech Refresh process to the USQ78(B) system.

The Update III Common Configuration program is based on Decision Coordinating Paper W-080-AS and the Program Management Plan #0526 serial 902D/6U324405. Up to 100 aircraft and 5 trainers to be modified to a common baseline configuration, then continuously upgraded via an ARCI process.

FY-02 SEI Congressional Plus-up provides associated NRE, 8 units, and installs as initial integration of new capability.
 FY-02 Congressional Plus-up provides NRE for Acoustic Data Recorder-Digital (ADR-D) input enhancements, a prototype digital model (EDM) and 31 ADR-D upgrade kits.
 FY-03 Congressional Plus-up provides associated NRE for 8 units to upgrade and install (ALR-95).
 FY-03 Congressional Plus-up provides 10 additional ADR-D kits with some NRE for obsolescence issues.
 FY-03 Congressional Plus-up for USQ-78(V) will be used to upgrade existing USQ78(V) hardware for technical refresh and End of Life (EOL) requirements.
 FY-04 Congressional Plus-up upgrades the ADR tape transport to a hard drive configuration for reliability and maintainability.
 FY-05 Congressional Plus-up upgrades the ADR tape transport to a hard drive configuration for reliability and maintainability.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

The original Update III variant received approval for limited production in December 1983 and December 1984. Approval for full production was received in January 1986. The basis of the currently planned common configuration is an AN/USQ-78(V) variant that received approval for full production in February 2002.

Exhibit P-3a

MODIFICATION TITLE: CRITICAL SYSTEMS IMPROVEMENTS(OSIP 053-85)
 MODELS OF SYSTEMS AFFECTED: P-3C TYPE MODIFICATION: Readiness

DESCRIPTION / JUSTIFICATION: The purpose of this program is to provide the requisite funding to implant various minor cost effective changes to critical P-3 weapon systems. These changes are essential to the operation of the aircraft and/or it's mission systems, but are not currently being addressed by an existing aircraft modification program. The changes can be either airframe, avionics, or procedures.

SINGLE ARMAMENT CONTROL PANEL (SACP) ECP JAX P3-649: This ECP replaces the existing 9622068 Wing Jettison/Special Weapon Control Box and the A-393 Pilot's Armament Control Box in 228 P-3C aircraft with the PEU-196/A Pilot's Armament Control Box.

KAPTON WIRING REPLACEMENT MOD ECP JAX P3-610: This ECP replaces the Kapton Wiring in the wing trailing edge of P-3C aircraft. The initial program will modify 97 P-3C aircraft.

STRUCTURAL DATA RECORDING SYSTEM (SDRS) ECP SEI 196-1A: The SDRS (ASH-37) CCB was approved in June of 1994 to install the ASH-37 in all P-3C aircraft. The funding to procure and install the kits was provided by OSIP (5-93). The funding for SDRS ended in FY95. The task covered in this OSIP include SDRS Pubs, SDRS data reduction and installation of last 20 kits.

STANDBY ATTITUDE INDICATOR (PEANUT GYRO) ECP BFGAAS ID-1481A/A-25583-48: This ECP modifies the P-3C Standby Attitude Indicator (Peanut Gyro) to operate with a DC power vice an AC power. This modification is planned for 148 P-3C's and 3 trainers.

E-J RECEIVER MOD AN/ALR-66 B(V)3 ECP LITTON 970: The AN/ALR-66B(V)3 ECP upgrades certain components of the AN/ALR-66A(V)3 ESM to improve system performance, including the E-J Amplifier Receivers, CD Amplifier Receivers, Processor Interface and Computer Converter. The effort under this OSIP supports the modification and certain RIM in support of AN/ALR-66 B(V)3 installs on 145 P-3C aircraft, 6 operational trainers and 10 test bench installations.

APS-115 FEEDBALL MODIFICATION ECP CUBIC 2509-02F3: This ECP are liability and performance improvement to the APS-115 radar feedball. The unmodified feedballs are susceptible to burning out which decreased the APS 115 sensitivity (or caused failure) and made the feedball incompatible with the AN/ALR-66 B(V)3 ESM system, which uses the feedball as the center channel receiver. This modification will be installed in all APS-115 equipped aircraft. This modification affects 90 P-3C aircraft.

P-3 PILOT/COPILOT/ PLANE CAPTAIN SEAT MODIFICATION FOR THE MA-16 INERTIA REEL ECP JAX P3-519: MA-1 and MA-2 Inertia Reels are no longer available in the supply system and further procurement is anticipated. This ECP provides a kit to modify 50 Pilot/Copilot/Plane Captain seats to install the MA-16 Inertia Reel as a substitute for the MA-1/2 to meet outstanding requirements.

Follow-On Kapton Wiring Replacement (Wheel Wells) ECP TBD: The Kapton wiring in the landing gear retraction housing areas (wheel wells) will require replacement due to weather exposure. Initial program will modify 18 P-3C aircraft.

Digital Autopilot : An FY-02 Congressional Plus-Up provided funding to perform NRE, procure, install and test a Digital Autopilot in the P-3C as a replacement for the ASW-31 system, which is highly unreliable and costly to maintain. An FY-03 Congressional Plus-Up provided funding to procure and install four Digital Autopilot systems.

Aircraft Health Monitoring System (AHMS) ECP N/A: An FY-02 Congressional Plus-Up provided funding to develop an AHMS for the P-3C which can monitor critical aircraft systems (engines, structures, electrical, avionics) to identify items that require maintenance or repair. An FY-03 Congressional Plus-Up provided funding to test an AHMS in a P-3C. An FY-04 Congressional Plus-Up provided funding to modify the prototype AHMS aircraft to test electronic engine instruments. An FY-05 Congressional Plus-Up provided funding for three additional pre-production AHMS kits and installs.

Infra-Red (IR) Strobes ECP JAX P3-776: FY-02 Defense Emergency Response Fund (DERF) funding for 100 IR strobes for P-3 aircraft.

Propeller Balancing Monitoring System (PBMS): An FY-04 Congressional Plus-Up provided funding to install and test a new propeller hub mounted system for power generation (HIPSS). An FY-05 Congressional Plus-Up provided funding to install and test a system for in-flight measurement of propeller vibration and balancing (PBMS).

Oxygen System Modification ECP JAX P3-833: Replaces the Aluminum Manifold Check Valve, Filler Check Valve and Pressure Reducing Valve with Monel Parts. O-Level Install. Models of systems affected: P-3C and P-3 Derivatives (EP-3, Special Projects, NP-3, VP-3 and UP-3).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The changes identified are minor and do not require approval for full production.

MODIFICATION TITLE: ASUW IMPROV. PROG.(OSIP 029-94)

MODELS OF SYSTEMS AFFECTED: P-3C TYPE MODIFICATION: Operational Improvement

DESCRIPTION / JUSTIFICATION: The Navy's Maritime Patrol and Reconnaissance Force (primarily P-3C Orion aircraft) provides three deliverables to Navy and joint commanders worldwide: Undersea warfare; Intelligence Surveillance, and Reconnaissance; and Maritime Surveillance Targeting. The ASUW Improvement Program meets the Navy's requirement to rapidly provide a significant increase in the current P-3's ability to perform Anti-Submarine Warfare (ASW), Anti-Surface Warfare (ASUW), Over-the-Horizon Targeting (OTH-T), and Command, Control, Communications, Computers, and Intelligence (C4I). The target aircraft for this modification are P-3C Update I/II.5 and Update III. This modification focuses on improving the weapon system's capability for standoff targeting and classification. Significant sensor improvements and capabilities are provided by the APS-137D (V) 5 imaging radar, the Advanced Imaging Multi-Spectral Sensor (AIMS) electro optical/infrared system, and ESM upgrades that include Specific Emitter Identification (SEI), SEI Utility Improvement, ALR-95, improved pulse processing, and DF accuracy. C4I is improved with a DAMA Satcom radio suite and Multi-mission Advanced Tactical Terminal (MATT) that can receive the Officer in Tactical Command Information Exchange System (OTCIXS), and other fleet broadcasts. Additional planned Phased Capability Upgrade (PCU) improvements include the Maritime Surveillance Targeting (MST) capability as well as Tactical Common Data Link (TCDL). Survivability enhancements include the ALE-47/AAR-47 missile warning countermeasures, explosive suppressant foam, and small circular area of probability weapon system (Maverick, SLAM, SLAM-ER, and provisions to carry and launch all Mil Std 1760 Digital weapons. Additional funding in FY1995 and FY1996 was utilized to meet an urgent fleet requirement to upgrade 17 Pre-AIP aircraft with Maverick armament control kits. FY2005 Emergency Supplemental Appropriation for Defense (ESAD) funds were provided to procure and install additional TC DL systems. The P3 AIP operational requirement document (ORD) is Ser # 355-88-94. Future Engineering Change Proposals (ECPs) are anticipated for the existing systems including APS 137 radar; AIMS EO/IR; MATT; Link 16; Global Communication & Control System - Maritime (GCCS-M); Precision Targeting Workstation (PTW); OASIS; Video Distribution Controller (VDC); Tactical Mission Computer; ALR-95 ESM; DAMA Satcom; MST; TC DL; Recorders including the High Resolution Digital Recorder; ALE47/AAR47; Digital Stores Management System (DSMS); all weapon systems including missiles, torpedoes, mines, as well as acoustic system upgrades. The ASW Maritime Improvement Program (AMIP) will provide for Mission System Sustainment, ASW improvements and improved C4I systems including INMARSAT /Integrated Tactical Picture

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This modification makes maximum use of previously developed subsystems.

MODIFICATION TITLE: CNS-ATM(OSIP 013-01)

MODELS OF SYSTEMS AFFECTED: P-3C/EP-3 TYPE MODIFICATION: Operational Improvement/Safety

DESCRIPTION / JUSTIFICATION: P-3C aircraft have a requirement for a Communications, Navigation and Surveillance/ Air Traffic Management (CNS/ATM) upgrades to meet expanding CNS/ATM requirements and ensure global access to commercial airspace. The CNS/ATM requirements consist of various avionics systems upgrades/replacements which currently include: VHF radio with 8.33 kHz channel spacing, IFF (Mode S and Mode 5), protected ILS/VOR with FM Immunity, and an upgraded GPS to provide increased navigation accuracy (RNP5, BRNAV, RVSM) with the capability to be upgraded to meet Automatic Dependent Surveillance Broadcast (ADS-B), Next Generation Communications (NEXCOM), Joint Precision Approach and Landing System (JPALS), Precision Area Navigation (PRNAV), Navigation Warfare (NAVWAR) and Joint Tactical Radio System (JTRS) requirements. Successful integration of any or all of these capabilities, and any future Federal Aviation Administration (FAA) or International Civil Aviation Organization (ICAO) mandates, requires an Flight Management System (FMS) which provides for growth and interface flexibility. This OSIP provides non-recurring engineering for the development of the CNS/ATM architecture for the P-3 aircraft which includes a FMS/CDU, digital air data computer (DADC) and an Electronic Flight Display Systems (EFDS). This modification program provides CNS/ATM upgrades for 148 P-3C aircraft and 16 EP-3 aircraft. RNAV/ MODE S Kit (JAX ECP P3-828) includes FMS/CDU 7000, Digital Air Data Computer, APX-118 (IFF/MODE S) and RINU-G. EFDS (JAX ECP P3-491), MMR (JAX ECP P3-826 & ARC-210 (8.33kHz) (Jax ECP P3-827) are Stand-Alone ECPs that will be installed separately or in conjunction with RNAV/Mode S ECP.

CPRG FRP approved by CNO directed 148 P-3C aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Acquisition Strategy approved 21 Nov 03/ACAT IVM. Preliminary Design Review for RNAV Mode S completed 16 Jun04. Began transition of ARC-210 (8.33kHz) Radio and MLR-2020 (P-ILS) from Roll-On/Roll-Off to permanent installation in FY-05 (PMA-209 funded).

MODIFICATION TITLE: P-3 READINESS IMPROVEMENT(OSIP 004-04)

MODELS OF SYSTEMS AFFECTED: P-3/EP-3 TYPE MODIFICATION: Readiness Improvement

DESCRIPTION / JUSTIFICATION: The purpose of this program is to incorporate a number of cost effective changes to the P-3/EP-3 weapon system, specifically targeting improvements to high cost and maintenance and obsolete readiness degrader items. These improvements are a vital element of the P-3/EP-3 sustainment bridge, significantly enhancing the strategy of a smaller, more ready, more capable P-3/EP-3 force during the bridge to Multi-Mission Maritime Aircraft (MMA). The increased readiness and capabilities that will be realized, support the foundational sustainment bridge elements, specifically operational availability and common configuration. Planned improvements under this OSIP cover airframe, propulsion and avionics related subsystems, utilizing Commercial Off-The-Shelf Systems (COTS) technology to the maximum extent practicable to minimize development and procurement costs, and to reduce the time to field the improved systems. The systems identified for replacement include HF Radio, HF-IP (Internet Protocol), Data Link, InfraRed Detection System, Autopilot, Inter Communication System, Magnetic Anomaly Detector (MAD), and Radar. Additionally, systems being evaluated for replacement include IFF Interrogator Set, and Magnetic Tape Recorder/Reproducer.

FY04 Congressional Plus-Up of \$2.0M for Electro-Optics and Communications Upgrade.
 FY05 Congressional Plus-Up of \$1.0M for Electro-Optics and Communications Upgrade.
 FY05 Congressional Plus-Up of \$2.0M for Digital Autopilot Systems.
 FY06 Congressional Plus-Up of \$1.0M for Electro-Optics and Communications Upgrade.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The COP NPDM authorizing MS-C / LRIP was approved 26 March 2004. The COP ADM authorizing FRP was approved 15 March 2006.

MODIFICATION TITLE: SSI-K(OSIP 005-05)
 MODELS OF SYSTEMS AFFECTED: All P-3 T/M/S TYPE MODIFICATION: Sustainment

DESCRIPTION / JUSTIFICATION: The Special Structural Inspection - Kits Program is an Operational Safety Improvement Program (OSIP) that will capture the P-3/EP-3 aircraft's test demonstrated fatigue life by replacing airframe structural components in fatigue life limiting critical regions of the P-3/EP-3 aircraft to enable the airframe to fully reach its designed service life but will not extend the fatigue life of those aircraft. Unchecked, these problem areas collectively will result in significant loss of aircraft from the operational inventory due to operational and support funding limitations. SSI-K will manufacture and install a structural mod / replacement kit for P-3 outer wing, center box and other components. Aircraft that have received an Enhanced Special Structural Inspection (ESSI) require only the Center Box subset of an SSI-K. These Center Box subset install kits are shown separately.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Program is in full rate production.

Exhibit P-3a

MODIFICATION TITLE: PROJECT K-0416(OSIP 005-07)

MODELS OF SYSTEMS AFFECTED: P-3C TYPE MODIFICATION: Operational Improvement

DESCRIPTION / JUSTIFICATION: CNO Project K-0416 program provides a rapid response ASW intelligence collection, analysis, and reporting system program focused on OPLAN specific threat submarines, both conventional and nuclear.

CNO K-0416 mission is to place high quality calibrated data on tape for subsequent exploitation and analysis. It is essential for submarine prosecution in deep and littoral water conditions in support of the Sea Shield/Sea Power 21.

The program accomplishes this by introducing advanced collection avionics that operate with special calibrated sensors to provide threat target data for tactical, S&T, and weapon design uses.

CNO K-0416 will modify P-3 Platforms, forward sited laboratories, and select forward deployed sites with these collection avionics to provide tactical and S&T Intelligence. Prime performer is the Naval Air warfare Center, Patuxent River. NAWC performs system integration, material acquisition, fabrication, and installation of collection systems.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The changes identified are minor and do not require approval for full production.

Exhibit P-3a

MODIFICATION TITLE: P-3 MISSION SYSTEMS(OSIP 006-08)

MODELS OF SYSTEMS AFFECTED: P-3C TYPE MODIFICATION: Operational Improvement

DESCRIPTION / JUSTIFICATION: The Navy's Maritime Patrol and Reconnaissance Force (primarily P-3C Orion aircraft) provides three deliverables to Navy and Joint commanders worldwide: Undersea warfare; Intelligence Surveillance, and Reconnaissance; and Maritime Surveillance Targeting. The P-3C Mission Systems Sustainment program will ensure that the P-3C aircraft continues to meet the Navy's requirement to perform Anti-Submarine Warfare (ASW), Anti-Surface Warfare (ASUW), Over-the-Horizon Targeting (OTH-T), and Command, Control, Communications, Computers, and Intelligence (C4I) until Full Operational Capability (FOC) of MMA is achieved (2019). Sustaining the sensor capabilities provided by the APS-137D (V) 5 imaging radar, the Advanced Imaging Multi-Spectral Sensor (AIMS) electro optical/infrared system, ALR 95 ESM, Tactical Common Data Link (TCDL), small circular area of probability weapon system (Maverick, SLAM, SLAM-ER, provisions to carry and launch all Mil Std 1760 Digital weapons with Digital Stores Management System, ALE-47/AAR-47 missile warning countermeasures due to obsolescence is essential in order to maintain these vital capabilities. Additional systems and capabilities may be required in order to remain effective in the Sea Power 21 Construct. These systems include APS 137 radar; Acoustic systems, AIMS EO/IR; MATT; Link 16; Global Communication & Control System - Maritime (GCCS-M); Precision Targeting Workstation (PTW); OASIS; Video Distribution Controller (VDC); Tactical Mission Computer; ALR-95 ESM; DAMA Satcom; MST; TCDL; Recorders including the High Resolution Digital Recorder; ALE47/AAR47; Digital Stores Management System (DSMS); all weapon systems including missiles, torpedoes, mines, as well as acoustic system upgrades. These improvements are a vital element of the P-3 sustainment bridge, significantly enhancing the strategy of a smaller, more ready, more capable P-3 force during the bridge to Multi-Mission Maritime Aircraft (MMA). P-3 C Mission Systems Sustainment is a branch of the ASW Maritime Improvement program (AMIP) to provide for obsolescence, technology refresh and technology insertion to P-3C mission systems.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This modification makes maximum use of previously developed subsystems.

DESCRIPTION: This line item funds modifications to S-3 aircraft. The S-3B is a carrier based, all weather, high wing, high subsonic, twin engine, multi-mission aircraft capable of Anti-Surface Warfare (ASUW) operations and tanking. The overall goal of the modifications budgeted in FY2008 is to provide funding to implement Engineering Change Proposals (ECPs) and Engineering Change Orders (ECOs) for flight critical S-3B systems that are essential to the continued safe operational employment and support of the S-3B aircraft. Total Active Inventory (TAI) is 6. The S-3B will reach end of service in 2009. The specific modifications budgeted and programmed are:

QUANTITY												
COST (In Millions)	1171.5	A	23.1	9.1	11.0	11.6	21.0	19.4	27.0	31.8	115.4	1440.9

DESCRIPTION:

This line item funds modifications to the E-2 aircraft. The E-2 is an all weather, carrier based, airborne early warning and command and control aircraft that extends task force defense perimeters by providing early warning of approaching enemy units and by vectoring interceptors into attack position. Additionally, the HAWKEYE provides strike control, radar surveillance, search and rescue assistance, communications relay and automatic tactical data exchange. The E-2 aircraft design service life is 10,000 flight hours with an average service life remaining through FY2020. The E-2 is a critical element of the Navy's Cooperative Engagement Capability (CEC). The Structural Enhancements OSIP (121-87) provides for procurement and installation of the new eight (8) bladed propeller. The Block II Upgrade OSIP (74-88) funds commercial technology, E-2 Warning Detection System, Radar Obsolescence, Vapor Cycle and Engine Turbine Blade reliability improvements and emerging safety of flight items such as parachute survival ensemble (PSE), cockpit lighting, and flight instruments. As the result of technological advancements, the Commercial-Off-The-Shelf (COTS) hardware/software of the Mission Computer (MCU) will change or become obsolete in the very near future. The Technology Insertion OSIP (5-01) supports assembly, validation and configuration management of COTS hardware and software of the MCU. The Outer Wing Panel (OWP) OSIP (87-88), funds OWP enhancements. The E-2 Core Open Architecture (OA) OSIP (5-09), provides core hardware and software architecture upgrades to reduce cost of future requirements integration. High Frequency Internet-Protocol (HFIP) OSIP (2-10) provides Internet-Protocol Networking capability to 31 E-2C (Hawkeye 2000/MCU) aircraft, utilizing existing High Frequency radio set and new airborne Advanced Digital Networking System (aADNS) Internet Protocol router/gateway. The E-2 In-Flight Refueling (IFR) OSIP (3-10), provides extended range and longer endurance for Battlespace Surveillance, Management, and Targeting for 24/7 operations. The Automatic Identification System (AIS) OSIP (2-11), will integrate this system into the E-2 mission computer and provide for a means to transfer AIS data from the aircraft to the warships in flight. The Dual Transmit Satellite Communications OSIP (1-13), provides the E-2 with an additional SATCOM radio satisfying a capability gap that is identified in Operation Enduring Freedom.

The specific modifications budgeted and programmed are:

Exhibit P-3a

MODIFICATION TITLE: STRUCTURAL ENHANCEMENTS(OSIP 121-87)

MODELS OF SYSTEMS AFFECTED: E-2C TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION:

The Navy Inventory Control Point (NAVICP) projected an E-2 propeller shortage in FY 2000. As a result, NAVICP approved a Logistics Engineering Change Proposal (LECP) to procure a new eight-blade propeller for the E-2 program office. The LECP funds the non-recurring and the procurement of 187 propellers only. The E-2 program office is responsible for funding the ground/flight test and overall system integration between Northrop Grumman (airframe), Allison (engine) and Hamilton-Sunstrand (propellers). The ground/flight test and prototype propeller kits were funded with APN-1 funds starting in FY99. Starting in FY00 retrofit propeller kits and installs were funded with APN-5 funds.

Repeatedly, E-2 Hawkeye and C-2A Greyhound elevator trim actuators have failed in flight and on deck, causing the aircraft to go into an immediate nose down flight profile. In some cases, the aircraft has lost half its altitude before control was regained. The community assesses this risk as potentially catastrophic. Failure of the elevator trim actuator occurs when an internal thrust bearing fails, allowing the rod end to separate from the actuator housing, resulting in an abrupt nose down trim. Safety ECP (NI 1004-04 Trim Actuator) provides a hardware correction by opening the elevator trim actuator, changing the bushing and other component parts. This OSIP funds the installation of 114 Trim Actuators, 72 kits in FY05 and 42 kits in FY06 funded by NAVICP.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

NP2000 Developmental Component Testing is complete. First successful developmental flight test took place in April 01. NP2000 production approved July 03. Flight test completed 2nd QTR 04.

MODIFICATION TITLE: BLOCK UPGRADE II(OSIP 074-88)
 MODELS OF SYSTEMS AFFECTED: E-2C TYPE MODIFICATION: Mission Performance Enhancement/Safety

DESCRIPTION / JUSTIFICATION:
 The Block II Upgrade OSIP (74-88) funds commercial technology, E-2 Warning Detection System, Radar Obsolescence, Vapor Cycle and Engine Turbine Blade reliability improvements and emerging safety of flight items such as parachute survival ensemble (PSE); cockpit lighting, and flight instruments.

E-2C Warning Detection System: Dual Element Fire Warning (Safety ECP 934-01) and Oil Pressure Transmitter (OPT) Warning Detection System (Safety ECP 938-01) - Replaces T56-A-427 Dual Element Fire Warning and Oil Pressure Warning System in the E-2 Aircraft to alleviate false warning indications.

Radar Obsolescence - Funds non-recurring and recurring engineering efforts for Obsolescence/Readiness Improvements to the APS-145 which is the number one weapon system mission degrader.

ECP 939-01 - "Vapor Cycle" - Funds wiring modification, rebusung of under sized wiring between circuit breakers in the vapor cycle system.

Engine Turbing Blade Cost Reduction & Effectiveness Improvement (CREI) - "T56-A-427 First Stage Turbine Blade - Track Seal Replacement" - A more durable metal blade track seal will replace the current ceramic seal. This design change is consistent with newer technology engines and is expected to increase the reliability of the T56-A-427 engine by reducing low power removals.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:
 Kits are being procured and installed on all applicable aircraft.

Exhibit P-3a

MODIFICATION TITLE: OUTER WING PANELS(OSIP 087-88)

MODELS OF SYSTEMS AFFECTED: E-2C TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION:

The E-2C fatigue test and inspection of aircraft have identified fatigue stress cracks in Outer Wing Panels (OWP) which could cause loss of aircraft and resulting in injury or loss of personnel. OWP's installed on T56-A-427 configured aircraft are limited to 7,500 flight hours. Teardowns of fleet OWP's showed that overhaul of the OWP is neither technically practical nor cost effective. This modification enhances the high stress areas. This incorporation extends the service life on OWP with Service Life Limit (SLL) of 6000 flight hours. Fourteen (14) OWP's will be enhanced with AYC-1222 (ECP 91145/C2A/859-97 Rev A).

Exhibit P-3a

MODIFICATION TITLE: TECHNOLOGY INSERTION(OSIP 005-01)

MODELS OF SYSTEMS AFFECTED: E-2C TYPE MODIFICATION: Mission Performance Enhancement

DESCRIPTION / JUSTIFICATION:

Commercial technology obsolescence drives hardware and software changes in Computing Resources for the E-2 Aircraft. Funding is required to support capability for assembly, validation, and configuration management of Commercial Off-The-Shelf (COTS) hardware/software provided to fleet squadrons and updated on a 4-year technology cycle. Specific examples include video boards, memory boards, CPU cards, compilers, middleware, backplanes, and operating systems that will change or become obsolete.

Government War On Terrorism (GWOT) effort: "E-2C Maritime Automatic Identification System (\$5M)" has been added to Other Support in FY06.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

The E-2 Program Support Activity (PSA) will insure software is upgraded, revised, and integrated so it functions with the versions of the COTS hardware and software delivered. The integration effort must start no less than one year prior to the delivery.

Exhibit P-3a

MODIFICATION TITLE: E-2 CORE OA/IP INFRASTRUCTURE & EXPERIMENTATION(OSIP 005-09)

MODELS OF SYSTEMS AFFECTED: E-2C TYPE MODIFICATION: Mission Performance Enhancements

DESCRIPTION / JUSTIFICATION:

An Open Architected distributed computing environment and Internet Protocol networking infrastructure is required to enable E-2 Global Information Grid (GIG) connectivity in a digital networking environment. This technology will reduce the cost and schedule to integrate future software intensive capabilities, such as Single Integrated Air Picture (SIAP), and eases the ability to share applications between platforms and Services. Funding for kits, installation and associated recurring efforts for Open Architecture (OA) computing hardware and software, Tactical Information Services (TIS) hardware and software, and Airborne Automated Digital System (AADN) digital router hardware and software.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

Design and integration non-recurring efforts are funded with RDT&E funds starting in FY08. Kit procurements for Fleet aircraft installs will begin in FY09 with the val/ver units.

FINANCIAL PLAN: (TOA, \$ IN MILLIONS)

COST (In Millions)	49.2	A	13.9	17.0	20.2	26.3	17.2	10.8	11.0	11.2	31.2	208.1

DESCRIPTION: This line item funds modifications to a group of trainer aircraft which includes T-34C, T-39, T-44A/C, TH-57, T-38, TC-12, and T-2C. The trainer aircraft are described as follows: The T-34C is a single engine turbo-prop, multi-seat aircraft produced by Beech Aircraft used to simulate jet aircraft flight; the T-39 is a dual-engine, multi-purpose aircraft used to train undergraduate flight officers; the T-44 is a twin-engine, multi-seat aircraft produced by Beech Aircraft used to simulate operation of twin engine aircraft, specifically the P-3; the TH-57 and TH-6 are a single-engine, multi-seat rotary wing aircraft used for helicopter training. The T-38 is a two seat twin-engine supersonic jet aircraft utilized by the US Navy Test Pilot School to train pilots, test flight officers, and test engines. The overall goal of the modification is to maintain safe and reliable operation of the trainer aircraft through the timely installation of necessary changes.

The specific modifications budgeted and programmed are:

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

TOTAL	26.2	13.9	17.0	20.2	26.3	17.2	10.8	11.0	11.2	31.2	185.0

Exhibit P-3a

MODIFICATION TITLE: T-44 AVIONICS OBSOLESCENCE(OSIP 005-04)

MODELS OF SYSTEMS AFFECTED: T-44A TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION: The T-44A Avionics are becoming non-supportable due to non-availability of parts. The following avionics systems require replacement: NCS-31A Area Navigation/Control System, AP-106 Autopilot, Flight Director and the RDR-130 Weather Radar. Avionics are being returned from the repair vendor Beyond Economical Repair (BER) due to non-availability of parts. Spare units are not available in the commercial market. IMPACT: As avionics become BER due to lack of parts, spares will be depleted. Lack of avionics will ground aircraft and severely degrade CNATRA's ability to meet Pilot Training Requirements beginning in FY04. Current plans call for T-44 to fly its training mission until 2015. There are 54 T-44A in the inventory and all 54 will receive this modification.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The T-44 Avionics Obsolescence (OSIP 05-04) non-recurring engineering occurred in FY04. Commercially available Non-Development Item (NDI) kit procurement and installations began in FY05.

MODIFICATION TITLE: T-38 A/C CONVERSION(OSIP 015-04)

MODELS OF SYSTEMS AFFECTED: T-38A SUPERSONIC JET TRAINER TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: The T-38A Aircraft was introduced into service between 1961 and 1962 and has undergone numerous changes through the years. The U. S. Navy has allocated 10 aircraft at TPS and relies heavily on the U. S. Air Force for engineering and logistics support. At the close of FY08, the U. S. Air Force will have transitioned all of their aircraft to T-38C and the U.S. Navy will need to stand-up engineering and logistics units for these unique aircraft. Due to the age of the aircraft, operations and support costs will increase over the life of the aircraft. The modifications will reduce O&S costs, allow the U. S. Navy to continue to utilize engineering and logistics infrastructure of the U. S. Air Force, and provide for improved safety of the T-38 Aircraft. The U. S. Navy plans to utilize the T-38 at USNTPS through 2020 and beyond. Future modifications will include improved wings and ejection seats, currently being developed by the U.S. Air Force.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: All components and systems required for this program are being developed and tested by the U.S. Air Force. No U. S. Navy unique operational testing is anticipated under this program.

Exhibit P-3a

MODIFICATION TITLE: TRAINER LEGACY A/C FAA(OSIP 006-05)

MODELS OF SYSTEMS AFFECTED: T-44A, TH-57B/C, TC-12B, T-34C, T-39G/N, T-2C TYPE MODIFICATION: Safety, Reliability, Maintainability

DESCRIPTION / JUSTIFICATION: Federal Aviation Regulations require manufacturers of commercial aircraft and associated systems/subsystems to investigate discrepant conditions, failures, and potential safety problems reported by all operators. The results of these investigations with recommended corrective action are reviewed/approved by the FAA and Navy and provided to all operators as service bulletins. Each service bulletin is a complete technical directive that provides corrective change information or detailed modification instructions. Compliance with many of these FAA bulletins is mandatory to ensure safe, reliable, FAA/Navy certified aircraft and continued flight operations. The Navy must maintain configuration and integrity compatible with FAA certified commercial models by incorporation of applicable service bulletins even when they emerge during the year of execution. The incorporation of certain service bulletins also serves to preclude extensive repairs/repetitive inspections. Crew equipment requirements in accordance with FAA directives and Navy requirements will be incorporated to ensure maximum safety in case of emergency. Specific modifications budgeted in this OSIP include the incorporation of TC-12B, T-34C, T-39G/N, T-44A, T-2C and TH-57B/C FAA Bulletins and Safety of Flight Navy Directives. Specific examples of components that will require modification to conform to FAA bulletins and directives: oxygen masks, brakes, wing wiring, attenuating seats, exceedence warning, flap actuators, UHF/VHF radios, GPS, Mode S Transponder, Traffic Avoidance System, and Landing Gear.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Applicable FAA data (Supplemental Type Certificates, Service Bulletins and Airworthiness Directives) is reviewed for possible incorporation on an as required basis. All data is previously approved and verified by the FAA.

MODIFICATION TITLE: TH-57 SAFETY UPGRADE(OSIP 006-07)

MODELS OF SYSTEMS AFFECTED: TH-57B/C TYPE MODIFICATION: Conversion/Safety

DESCRIPTION / JUSTIFICATION: The TH-57 is the sole platform for primary helicopter flight training for student aviators (USN, USMC, USCG) and foreign military pilots. This modernization effort capitalizes on technology improvements by increasing aircrew survivability and situational awareness while providing a fleet representative digital cockpit configuration.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The components of this block upgrade will be COTS as turnkey items. ACI by the commercial contractor.

Exhibit P-3a

MODIFICATION TITLE: T44 WING WIRING(OSIP 007-07)

MODELS OF SYSTEMS AFFECTED: T-44A/C TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION: The NAVAIR Wiring System Team, AIR-4.4.4.3, completed a Wiring Integrity Study on the T-44A in FY02 and identified that the aircraft wiring, outside the pressure vessel, has deteriorated to an unacceptable condition. It was recommended that the wiring in the wings, from pressure vessel outward (including the engines) be replaced. Current Navy long-term plans are to operate the T-44A aircraft until the year 2025. In order to safely and economically maintain aircraft availability and PTR, it is necessary to replace the wiring. Note that aircraft designated T-44A are redesignated T-44C upon completion of Avionics Obsolescences (OSIP 005-04) Modifications.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The wings are commercially available, non-developmental items (NDI) and will be installed during ACI by the commercial contractor.

DESCRIPTION:
 The C-2A(R) Greyhound is a high wing monoplane, twin engine turbo-prop aircraft capable of operating from both a shore base and all operational USN aircraft carrier classes. The mission of the C-2A(R) is to provide rapid response Carrier Onboard Delivery (COD) of fleet essential supplies, repair parts, and personnel to sustain at sea operations of deployed battle groups. In addition, the C-2A(R) provides airdrop delivery and mobilization support for special operations forces from land bases and carriers. The design service life of the C-2A(R) is 10,000 flight hours with 15,000 landings. Service Life Extension Program (SLEP) modifications increase the service life to 15,000 flight hours and 36,000 landings, remove and replace all aircraft wiring and install various upgrades to allow C-2A(R) to meet requirements into the next decade. The overall goal of the modifications in FY 2008 is to continue procurement efforts for the C-2A(R) SLEP and to begin work on the Critical Components Program. Critical Components are composed of Aighting & Landings, Avionics Upgrades, Engine Power & Propulsion, Hydraulic's, and Structural/Pressurization Engineering Change Proposals (ECPs).

Exhibit P-3a

MODIFICATION TITLE: C-2A(R) Blk Upgrade/Service Life Extension Program (SLEP)(OSIP 024-94)

MODELS OF SYSTEMS AFFECTED: C-2A(R) Aircraft TYPE MODIFICATION: MISSION PERFORMANCE ENHANCEMENTS

DESCRIPTION / JUSTIFICATION:

The C-2A(R) Block Upgrade/Service Life Extension Program (SLEP) extends the Navy's Carrier Onboard Delivery (COD) capability beyond current projected service life. Efforts funded in this OSIP include Structural Enhancements, Aircraft Rewiring, L-Probe Kit, CAINS II, ARC-210 Radios, Outer Wing Panel Enhancements, and NP-2000 (8 bladed propeller).

Repeatedly, C-2A(R) Greyhound elevator trim actuators have failed in flight and on deck, causing the aircraft to go into an immediate nose down flight profile. In some cases, the aircraft has lost half its altitude before control was regained. The community assesses this risk as potentially catastrophic. Failure of the elevator trim actuator occurs when an internal thrust bearing fails, allowing the rod end to separate from the actuator housing, resulting in an abrupt nose down trim. Safety ECP (NI 1004-04 Trim Actuator) provides a hardware correction by opening the elevator trim actuator, changing the bushing and other component parts. Naval Inventory Control Point (NAVICP), utilizing Navy Working Capital Fund (NWCF) funds bought 36 spare kits (FY-05) and 20 spare kits (FY-06) which are installed with this OSIP.

Global War on Terrorism (GWOT) efforts: "C-2A(R) Center Wing Section (CWS) Hinge Fittings (\$1.0M)" and "C-2A(R) Structural Data Recording System (\$.950M)" have been added to Installation Kits N/R in

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

Development and Operational Testing (DT and OT) have been completed for the CAINS II, L-Probe, Structures, Rewire, and ARC-210 efforts included in this OSIP. DT and OT for NP2000 will complete in FY 2007. Aircraft Rewire effort experienced technical difficulties during initial validation process and program was restructured resulting in a 2 year slip. Procurement of kits commenced in FY07. NP2000 has also experienced delays due to test article issues related to the program. It has also experienced a two year slip and has been restructured.

Exhibit P-3a

MODIFICATION TITLE: C-2A(R) CRITICAL COMPONENTS (OSIP 011-07)

MODELS OF SYSTEMS AFFECTED: C-2A(R) Aircraft TYPE MODIFICATION: MISSION PERFORMANCE ENHANCEMENTS

DESCRIPTION / JUSTIFICATION:

The C-2A(R) Service Life Extension Program (SLEP) extends the Navy's Carrier Onboard Delivery (COD) capability beyond current projected service life. With this longer airframe life, problems with other non-SLEP systems require upgrade/modifications. Commencing in FY2007 and out, this OSIP procures a portion of the Critical Components avionics, hydraulics, structural or power and propulsion subsystems.

DESCRIPTION: This item funds modifications to C/KC-130 aircraft. The Lockheed C/KC-130 aircraft is a four engine, high-wing, all metal, long range, land based monoplane capable of all weather transport of cargo or personnel and in-flight refueling. There are currently 98 aircraft in the Navy and Marine Corps inventory (50 active and 48 reserve). The expected Service Life is as follows:

T/M/S	Service Date	Service Life	Expected Life
C-130T	10/91 - 11/95	450 mos.	2028-2032
KC-130F	03/60 - 11/62	600 mos.	2010-2012

MODIFICATION TITLE: AIRCRAFT SURVIVABILITY EQUIPMENT (ASE) (OSIP 020-03)

MODELS OF SYSTEMS AFFECTED: C/KC-130F/R/T/J TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION: Subject funding is being used to improve aircraft survivability by upgrading or replacing certain Defensive Electronic Countermeasures (DECM), installing Fuel Tank Foam, and installing ballistic armor protection. DECM Upgrades/Replacements: the existing AN/AAR-47 Missile Warning System (MWS), AN/ALQ-157(V)1 Infrared Countermeasures (IRC) system, and replacing the AN/ALE-39 Countermeasure Dispensing System (CMDS). The AN/AAR-47(V)2 (MWS) improves performance over the existing system in the following areas: reduction in signal noise and false alarms, increased sensor sensitivity and range, greater detection efficiency, extends the overall temperature range sensed, and improves reliability. The new AN/ALQ-157(V)2 IRCM provides many reliability and maintainability enhancements. The new AN/ALE-47 CMDS is an integrated, threat adaptive, reprogrammable, computer-controlled expendable dispensing system. Installation of fuel tank foam in the main, external, and auxiliary fuel tanks reduces the susceptibility of loss or severe damage to the aircraft and loss of life from fuel fire/tank rupture due to surface-to-air or air-to-air fire. The installation of ballistic armor provides crew protection and enhances aircraft survivability.

Exhibit P-3a

MODIFICATION TITLE: ELECTRONIC PROPELLER CONTROL SYSTEM (EPCS) (OSIP 021-04)

MODELS OF SYSTEMS AFFECTED: C-130T, KC-130T TYPE MODIFICATION: READINESS IMPROVEMENT

DESCRIPTION / JUSTIFICATION: The USMC KC-130 and Navy C-130T aircraft currently operate with a hydro-mechanical valve housing designed in the 1950's. This component controls the pitch angle of the propeller blades and it is consistently in the top three readiness degraders and is the number one reason for in-flight aborts. The current valve housing is a significant readiness degrader and a high manhour unscheduled maintenance driver for the fleet. EPCS has the following OAG priorities: #4 Navy OAG and #9 USMC OAG.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This OSIP represents the first recurring installation. This OSIP affects 20 C-130T (Reserve) aircraft and 27 KC-130T (active) aircraft.

Exhibit P-3a

MODIFICATION TITLE: C-130J CNS/ATM (OSIP 010-06)

MODELS OF SYSTEMS AFFECTED: KC-130J TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION: Objective of the Communication Navigation Surveillance/Air Traffic Management (CNS/ATM) OSIP is to preserve utilization of current KC-130J capabilities world-wide by meeting International Civil Aviation Organization (ICAO) Air Traffic Management mandates through a series of commercial procurements and post-production retrofit installations. ICAO mandates elementary Mode-S, enhanced Mode-S and Required Navigation Performance/Area Navigation (RNP/RNAV) capabilities in the European Flight Information Region (FIR) starting in FY06, followed by the requirement of enhanced Mode-S, which is the Automatic Dependent Surveillance-Broadcast (ADS-B) comm-link, and will be required in FY07. This OSIP will upgrade the KC-130J to elementary Mode-S, enhanced Mode-S and RNP/RNAV through two separate initiatives. The first and least intensive, elementary Mode-S begins in FY06, and the second, enhanced Mode-S and RNP/RNAV solution, which is software intensive and highly complicated, will begin in FY09. This OSIP is required in order to avoid airspace utilization limitations, ranging from usage restrictions to total airspace exclusion, as well as ensuring continuous KC-130J transport of personnel, material and aerial refueling services within and through these FIRS. Major DoD logistic hubs supporting Operation Enduring Freedom/Operation Iraqi Freedom (OEF/OIF) are located in the European FIR. This OSIP affects all 51 KC-130J aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Lockheed Martin has been tasked to deliver, by November 2005, an ECP to incorporate Mode S & 8.33 KHZ into Military Baseline 5.4 Software already developed for the USAF. The new Software version 5.5 will be available FY07. A second ECP will be requested of Lockheed Martin to incorporate the remaining requirements; RNP/RNAV and Military Embedded GPS Inertial (EGI) with Selective Availability Anti Spoofing Module (SAASM) and Receiver Autonomous Integrity Monitoring (RAIM). The new Identification Friend or Foe (IFF) upgrade program is in progress, with Mission Computer upgrades to begin FY06. Reduced Vertical Separation Minima (RVSM) certification requires a new Static Source Error Correction for the Air Data Computer scheduled for FY06. All kits are Commercial Off The Shelf (COTS) equipment.

Exhibit P-3a

MODIFICATION TITLE: KC-130 VARIABLE SPEED DROGUE (OSIP 007-08)

MODELS OF SYSTEMS AFFECTED: KC-130F/R/T/J TYPE MODIFICATION: Performance Enhancement

DESCRIPTION / JUSTIFICATION: The KC-130 is a 4 engine, high-wing, long range, land based monoplane. The primary mission of the KC-130 is to provide aerial refueling for both high speed fixed wing aircraft and low speed rotary wing aircraft. Currently, a ground change of the refueling drogue is required for low speed and high speed refueling operations. The objective of the USMC Variable Speed Drogue (VSD) OSIP is to equip the KC-130 fleet with a Variable Speed Drogue capable of refueling both high speed and low speed aircraft with the same drogue. The VSD's required capability will enable the KC-130 to aerial refueling throughout the 105-250 KTS TAS range without changing drogues. This will support the low speed, high speed and V-22 single engine failure aerial refueling requirements.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Currently the Variable Speed Drogue is in Phase 2 prototyping with testing expected to be completed by the end of FY07. Production and modification will commence in FY08.

MODIFICATION TITLE: AN/AST-6(V), AN/DLQ-3, AN/ULQ-21 & AN/ALQ-167 (OSIP 119-83)

MODELS OF SYSTEMS AFFECTED: N/A TYPE MODIFICATION: RELIABILITY, MAINTAINABILITY, CAPABILITY

DESCRIPTION/JUSTIFICATION: The AN/ALQ-167 pods electronically simulate threat airborne radar jamming systems. The AN/ALQ-167 pods internal components are also installed internally in aircraft. When these components are utilized in this type of installation, they are nomenclatured AN/DLQ-3 and AN/ULQ-21. The AN/AST-6(V) pod electronically simulates several types of threat anti-ship missile seeker systems. These podded devices were first introduced into the fleet in 1980 and proved exceptionally useful in readiness exercises. The AN/ALE-43(V) Countermeasures, Chaff Dispenser Set (CCDS) is an integral, high capacity, bulk chaff cutting/dispensing system used for self-protection, fleet screening, corridor seeking and training operations. This program provides for the procurement and continued support of additional quantities of these pods for use by logistics support squadrons and other operational fleet units. No aircraft modifications are required to use these pods.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: The objective for the AN/ALQ-167 is 186 pods, there are currently 146. There are 25 AN/AST-6(V) production assets. The objective is to achieve a total of 50 pods. The AN/ALQ-167 avionics are being upgraded. When these upgraded avionics are internally installed in aircraft, they are nomenclatured as AN/ULQ-21 systems.

DESCRIPTION: This line item funds modifications to the following cargo and transport aircraft: (C-9B/DC-9B, C-40A, C-20A/D/G, C-37A/B, UC-35C/D, RC-12F/M, UC-12B/F/M, NC-12B and EC/RC-26D.

The C-9B/DC-9B Skytrain II, C-40A Clipper, C-20A/D/G Gulfstream IV, C-37A/B Gulfstream V and UC-35C/D Cessna Citation, are commercial twin jet transport aircraft that provide time-critical medium lift logistic support for the fleet combatant commanders. C-9/DC-9 is capable of carrying up to 32,000 pounds of cargo and personnel for over 3,300 nautical miles at a maximum speed of 430+ knots. C-40 can accommodate 121 passengers, or 8 pallets of cargo, or a combination configuration of 3 pallets and 70 passengers with a range of 3,400 nautical miles. C-20D/G is capable of high-speed transport of 13 passengers or cargo over a range of 4,100 nautical miles at 437 knots. C-20A and C-37 provides worldwide executive transport to SECNAV, CNO, CMC, and Fleet Commanders. C-35 provides transport for high priority passenger/cargo missions with time, place or mission sensitive requirements. C-35 can accommodate six passengers or 1,200 pounds of cargo with a range of 1,300 nautical miles at 234 knots. The C-12 King Air and C-26 Metro variants are commercial twin turbo-prop aircraft that provide shorter-range light lift passenger/cargo transport and range control missions. C-12 is capable of carrying six passengers or maximum cargo capacity of 2,850 pounds, 1, 075 nautical miles at 225 knots. C-26 is capable of carrying 19 passengers 1, 300 nautical miles at 234 knots.

Exhibit P-3a

MODIFICATION TITLE: FEDERAL AVIATION ADMINISTRATION (FAA) CONFIGURATION UPDATES (OSIP 071-86)

MODELS OF SYSTEMS AFFECTED: CARGO TRANSPORT A C SERIES TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: Federal Aviation Regulations require manufacturers of commercial aircraft and associated systems/subsystems to investigate discrepant conditions, failures, and potential safety problems reported by all operators. The results of these investigations with recommended corrective action are reviewed/approved by the FAA and Navy and provided to all operators as service bulletins. Each service bulletin is a complete technical directive that provides corrective change information or detailed modification instructions. To ensure safe, reliable, FAA/Navy certified aircraft and to provide a program that will assure continued life extension at minimum cost, the Navy must maintain configuration and integrity compatible with FAA certified commercial models by incorporation of applicable service bulletins. The incorporation of certain service bulletins also serves to preclude extensive repairs/repetitive inspections. Crew equipment requirements in accordance with FAA directives and Navy requirements will be incorporated to ensure maximum safety in case of emergency. Specific modifications budgeted in this OSIP include the incorporation of C-9B/DC-9, C-20, C-26, UC-35, C-37, C-40 and C-12 FAA Bulletins and Directives.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Service Bulletins are reviewed for possible incorporation on an as required basis. Prototype verification has been previously accomplished and approved by the FAA.

Exhibit P-3a

MODIFICATION TITLE: C-12 FLT SAFETY UPGR (OSIP 014-98)

MODELS OF SYSTEMS AFFECTED: CARGO TRANSPORT A C SERIES TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: The crash of a U.S. Air Force CT-43 while flying a Non-Directional Radio Beacon (NDB) approach resulted in a Department of Defense initiative to upgrade flight safety systems as soon as possible in all passengers carrying aircraft. This OSIP was established to ensure compliance with this initiative on 81 C-12 model aircraft and identified flight safety systems required to be upgraded, Flight Safety Upgrade (FSU). FSU upgrade replaced existing flight management system, weather radar, radar altimeter and added TCAS and TAWS. Initiatives for the last two years have lead to divesting of CONUS based UC-12B aircraft. The number of UC-12 aircraft to receive FSU has dropped from the original 81 to 44. Further, planned FSU installations have over run upgrade efforts under OSIP 12-04, CNS/ATM. To maximize fleet aircraft availability, minimize impact to planned fleet operations and minimize upgrade costs; a decision was made in FY04 to combine the installation of the remaining seven FSU installations for the C-12F with planned Block 1 CNS/ATM installations under OSIP 12-04. Efforts to be funded under this OSIP will include 44 'A' and 'B' kits and 37 installations. The remaining 7 installations will be concurrent with C-12F CNS/ATM installations

Exhibit P-3a

MODIFICATION TITLE: CNS/ATM (OSIP 012-04)

MODELS OF SYSTEMS AFFECTED: CARGO TRANSPORT A C SERIES TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: World-wide airspace congestion and communication bandwidth saturation has lead the International Civil Aviation Organization (ICAO) to restructure the world-wide airspace structure to improve safety through a series of equipment and performance mandates implemented by regional authorities. The above Type/Series/Models will be required to comply with the following mandates to retain the Navy's capability to operate these aircraft worldwide. Failure to comply with these time-phased mandates will result in being denied access to high-volume airspace (routing and altitudes) and airfields, or at a minimum resulting in circuitous routing and sub optimal altitudes for fuel consumption. The following CNS-ATM mandates will be implemented in post production aircraft in this OSIP: Communications - 8.33Khz VHF channel spacing, SATCOM voice and data, Controller Pilot Data Link Communications (CPDLC), Automatic Dependent Surveillance ADS-B, Navigation - Required Navigation Performance (RNP) 10NM, 5NM, 4NM, and less than NM; Reduced Separation Minimum (RVSM); Protected-ILS; and digital navigation databases. Navigational accuracy mandate progressively tightens over time until GPS based aircraft routing, Standard Instrument Departures (SID) and Standard Terminal Arrival Routes (STARs) are implemented worldwide. This will result in a series of equipment changes. Surveillance - Enhanced Terrain Awareness Warning System (TAWS), Traffic Alert and Collision Avoidance System (TCAS), Automatic Dependent Surveillance ADS-B, Emergency Locator Transmitter (ELT) and Mode S Transponder.

To minimize the impact of successive modifications and maximize aircraft availability, a block upgrade approach has been taken during this budget submit. C-20D, C-12 and C-26 expenditures in FY04 and prior years comprise part of Block 1 as noted below by an *. Block upgrades have been prioritized and phased to meet regional mandates 'just in time' to ensure that commercial CNS-ATM solutions are available off the shelf to minimize non-reoccurring engineering associated with FAA supplemental type certification. In order to incorporate CNS-ATM mandates several older aircraft (C-20A, C-37A, C-35C, all C-26 and C-12) required the installation of a digital flight management and communication system

CNS-ATM capabilities associated with each Block Upgrade listed below:

C-9 C-9B: Block 1 - CPDLC, Mode S, TAWS Upgrade, and ELT: Block 2 - ADS-B

C-40 C-40A: Block 1 - Mode S, and TAWS Upgrade: Block 2 - CPDLC

C-20 C-20A: Block 1 - RNP-1 Flight Management System, Mode S, ELT, TAWS upgrade, DME upgrade, and CPDLC: C-20D -Block 1 Avionics Upgrade* HF Radio Upgrade*, Mode S, ELT, TAWS upgrade: Block 2 - CPDLC; C-20G - CPDLC, Mode S and TAWS upgrade

C-37 C-37A: Block 1 -RNP-1, Flight Management System, CPDLC, Mode S, and TAWS upgrade: Block 2 - ADS-B: C-37B - Block 1 Mode S, CPDLC: Block 2 - ADS-B

C-35 C-35C: Block 1 - RNP-1, Flight Management System, Mode S, ELT, DME upgrade: Block 2 - CPDLC: C-35D Block 1 - CPDLC, Mode S, and TAWS upgrade: Block 2 - ADS-B

C-26 EC/RC/UC-26D: Block 1 - TAWS* and TCAS-II*: Block 2 - RNP-1, Flight Management System, RVSM and CPDLC

C-12 C-12B: Block 1 - P-ILS*, 8.33 KHz VHF Channel Spacing*: Block 2 -SATCOM, CPDLC, RNP-1, Flight Management System, Mode S, ADS-B: C-12F Block - 1 Flight Management System, 8.33 KHz VHF Channel Spacing*, P-ILS*, RVSM, ELT and Mode S: Block 2 - SATCOM,

CPDLC and ADS-B: C-12M Block 1 - 8.33 KHz Channel Spacing*, ELT, RNP-1, Flight Management System, ELT, and RVSM; Block 2 - SATCOM, CPDLC and ADS-B

Exhibit P-3a

MODIFICATION TITLE: UC-35 AIRCRAFT SURVIVABILITY EQUIPMENT (OSIP 016-06)

MODELS OF SYSTEMS AFFECTED: CARGO TRANSPORT A C SERIES TYPE MODIFICATION: SAFETY/RELIABILITY

DESCRIPTION / JUSTIFICATION: Marine Forces are currently engaged in combat operations and have a stated need to utilize the UC-35 within Iraq now. Marine Corps UC-35's do not possess Aircraft Survivability Equipment (ASE). The Marine Corps maintains a UC-35 deployed presence in South West Asia, but is precluded by CMC from flying into Iraq (and other threat areas) without ASE. By equipping the UC-35 with ASE, it will be able to perform its mission of time-sensitive transport of high priority passengers and cargo in high threat environments (Iraq & other nations). This enhanced capability will reduce the amount of time required to move high priority passengers and cargo by enabling the aircraft to get closer to Marine, Joint and Coalition forces in theater. Additionally, installation of ASE will remove the requirement of this mission from our already over burdened and less-suited KC-130's. Allowing for use of the UC-35 in Iraq (and other high threat areas) by equipping it with ASE, "greatly reduces impact on KC-130 aircraft thereby allowing aircraft to perform primary mission of tactical support to the Marine Expeditionary Force." (CG III MAW 18 Jan 05).

BUDGET ITEM JUSTIFICATION SHEET											DATE:	
P-40											February 2007	
APPROPRIATION/BUDGET ACTIVITY								P-1 ITEM NOMENCLATURE				
Aircraft Procurement, Navy / APN5 Aircraft Modifications								056400, E-6 SERIES				
Program Element for Code B Items:								Other Related Program Elements				
	PRIOR YEARS	ID Code	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL
QUANTITY												
COST (In Millions)	903.3	A	11.1	58.6	126.2	106.2	112.7	127.1	125.2	116.3	230.2	1916.9

DESCRIPTION: This line item funds modifications to E-6 "Take Charge and Move Out", TACAMO aircraft. All sixteen (16) aircraft in the TACAMO fleet will receive each modification. The E-6 TACAMO is a manned airborne communications relay platform designed to provide a survivable, reliable, endurable airborne command and control communications link between the President, Secretary of Defense and U.S. strategic and non-strategic forces. The Navy and Air Force were directed to take actions necessary to incorporate Airborne Command Post (ABNCP) (OSIP 032-93) functions into the E-6A, which were completed in Nov 03. The last install to complete the additional requirements of the ADP, DAMA, Weight and Space (ADWS) Program under OSIP 032-93, occurred in Nov 06. The Multifunction Display System (MDS) (OSIP 027-99), approved as the solution to maintain worldwide deployability due to changing Communications, Navigation and Surveillance/Air Traffic Management (CNS/ATM) requirements, also completed in Nov 06. E-6 Mission Support (OSIP 007-02) corrected Follow-On Test & Evaluation (FOT&E - Sep 98) deficiencies by updating the design of and fabricating new rewind machines and purchasing "off-the-shelf" power carts to provide adequate aircraft power for full mission checkout. Mission Support will also upgrade the aircraft Frequency Reference Auto Paralleling Unit (FRAPU) to allow proper power transfer from/to ground/aircraft power and procure various ground support and Peculiar Support Equipment (PSE) for the E-6B aircraft. Safety Deficiencies (OSIP 008-02) includes a smoke detection system, replacement of the aircraft auxiliary power unit (APU) crossover and exhaust ducts (and installation of a heat shield for the APU), replacement of aircraft Kapton wiring, installation of the Crash Survivable Flight Incident Recorder (CSFIR), replacement of the Fuel Quantity Indicating System (FQIS) and replacement of the aircraft thermal blankets. It also included replacement of an uncertified Cartridge Activated Device (CAD) (explosive) for severing the Long Trailing Wire Antenna in emergencies, installation of new improved inertia reels and shoulder harnesses and replacement of unsafe fuel boost pumps and aircraft batteries and battery charging systems prone to thermal overload (completed in FY06.) Tech Insertion (OSIP 003-04) addresses obsolescence, supportability, new technologies, systems updates and interoperability issues in the areas of: Mission Computer Set (MCS) hardware, Mission Avionics Processing System (MAPS), Flight Management Computer System (FMCS), Secure Telephone Unit (STU) and the unsupported Standard Distribution Switching Unit (SDSU). Service Life Extension Program (SLEP) (OSIP 003-07) is designed to extend the service life of the E-6B aircraft to 2040+. E-6 Mission Deficiencies Improvements (Block I), replaces the Digital Airborne Intercommunication Switching Set (DAISS) and installs an Open System Architecture that will allow low cost modifications for emerging requirements. It also replaces the Mission Computer Set, adds flat panel displays in the battle staff area and replaces the UHF C3 modem. The E-6B Mod (ADWS) and Multifunction Display System programs were restructured to increase aircraft availability, reduce fleet aircraft configurations, reduce logistics costs, increase operational flexibility, maximize production effort and allow trainer modifications to be done concurrently. Block Recapture installs a new Auxiliary Power Unit (APU) to meet mission requirements and replaces the VLF Transmit Terminal and High Power Transmit Set (HPTS) subsystems due to obsolescence. Communications (IP/T3) Upgrade (OSIP 012-07) increases communications bandwidth to 45 Mbps to support battlestaff command and control and first responder operations.

Exhibit P-3a

MODIFICATION TITLE: E-6B MOD(OSIP 032-93)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: Mission Needs Statement: E-6A TACAMO/Airborne Command Post (ABNCP) Consolidation Program, MO-40-88-93, dated 22 Sep 93, substantiates the transfer of avionics equipment from the Air Force EC 135 ABNCP platform to all 16 Navy E-6A TACAMO aircraft. This program consolidates Joint Chiefs of Staff (JCS) Strategic Command and Control tasking into one survivable airborne strategic platform and achieves significant operations and maintenance savings of at least \$50M annually. The addition of the ABNCP mission to the TACAMO aircraft results in one platform having the ability to relay Emergency Action Messages from the President and Secretary of Defense to U.S. Strategic Forces and for the STRATCOM Commander to directly execute command and control of those forces. Operational Requirements Document E-6B ORD 629-78-04, 5 Feb 04, supports modifications for the High Power Transmit Set (HPTS), original ABNCP avionics systems and MILSTAR capabilities. These are encompassed in ECP CTAS-100R3. E-6B ORD 629 78-04, 5 Feb 04 incorporates newly identified requirements, including approved ECP RCS-100R1 for Voice Satellite (VOSAT) Communications and Engineering Change Proposals (ECPs) for Cryptographic (CRYPTO) equipment upgrades, Ultra High Frequency (UHF) Demand Assigned Multiple Access (DAMA) installation, Automated Data Processing Capability (ADP) and Weight Savings. VOSAT capability is a voice recognition system that is required by COMSTRAT for uncompromised communications. CRYPTO upgrade is required by COMSTRAT to ensure ABNCP receipt and distribution of encrypted messages in accordance with relay timing parameters. UHF DAMA is required for communications across the spectrum of Command and Control responsibilities. ADP capability is required by COMSTRAT for efficient operations by the embarked Battle Staff and for the capability to receive and generate encrypted and classified correspondence. The weight savings is required to offset the effects of other modifications on E-6B zero gross fuel weight parameters. The ADP, UHF DAMA and Weight Savings requirements are combined into the ADWS program and will apply to all 16 E-6Bs, in the active fleet inventory. The ADWS program was restructured in FY03 to increase aircraft availability, reduce fleet aircraft configurations, reduce logistics costs, increase operational flexibility, maximize production effort and allow trainer modifications to be done concurrently. Tactical Local Area Network Encryptor (TACLANE) Crypto was installed through FY05. This modification program is not applicable to any aircraft in either the National Guard or the Reserves.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Milestone III decision on ABNCP modifications granted January 1995. Milestone III decision for Avionics Upgrade and HPTS granted December 1995. FOT&E completed June 1998. Initial Operating Capability (IOC) date of 1 October 1998 was met. September 1997 message from STRATCOM delineated additional requirements and associated program cost growth which resulted in E-6B program restructure with ABNCP Full Operating Capability shifting from January 2001 to February 2003. All ABNCP aircraft modifications have been completed. IOC for VOSAT modification was met 1 October 1998 and IOC for CRYPTO was met 1 July 2000. TACLANE Crypto kit buys completed FY04. A contract was awarded for the ADWS program September 2000. E-6B Modification ADWS Program was extended to increase aircraft availability, reduce fleet aircraft configurations, reduce logistics costs, increase operational flexibility, maximize production effort and allow trainer modifications to be done concurrently. Installation completed November 2006.

Exhibit P-3a

MODIFICATION TITLE: MULTIFUNCTION DISPLAY SYSTEM(OSIP 027-99)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: Operational Requirements Document E-6B ORD 629-78-04, 5 Feb 04 requires installation of the Multifunction Display System (MDS) in all 16 E-6B aircraft. Current and future changes to Communications, Navigation and Surveillance/Air Traffic Management (CNS/ATM) required by Federal Aviation Administration/International Civil Aviation Origination (FAA/ICAO) are satisfied by the installation of the MDS. Modifications to the E-6B cockpit display system are required due to changes in the FAA/ICAO Required Vertical Separation Minimums and other airspace restrictions. The MDS requires modification of a Commercial Off-the-Shelf (COTS) item to an E-6B configuration. Because it is similar to commercial equipment, any further modifications will be less costly. Upgrades to installed systems and changes to the Flight Management Computer System (FMCS) can then be accomplished by changing software without changing the hardware. The MDS program was restructured in FY03 to increase aircraft availability, reduce fleet aircraft configurations, avoid \$16M logistics costs, increase operational flexibility, maximize production effort and allow trainer modifications to be done concurrently. GPS-A receiver controls are required to support currently installed military GPS receivers. Nav Table update gives the Navigator Station the ability to provide services during a degraded mission and to support the E-6B Mission Commander and Battlestaff.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: MDS was granted a Milestone III decision 5 May 98. Contract award on 9 Sep 99. Specific and separate Non-Recurring Engineering (NRE) efforts for systems integration of COTS hardware/software occurred in the first two years. Production of NRE COTS article for E-6B configuration began October 2000 with subsequent installation and testing in February 2001. Production deliveries/installations funded through September 2005. Funding provided via Program Decision Memorandum (PDM)-1 required partial spread of NRE efforts. Cost growth from original estimates allows for 1 NRE aircraft kit/installation, 15 production aircraft kits/installations and 1 Operational Flight Trainer kit/installation. Initial Operational Capability (IOC) achieved March 2005. Increased cost and schedule requirements for modification of the Operational Flight Trainer (OFT) required a Milestone Decision Authority (MDA) approved change #2 (16 May 03) to the Acquisition Program Baseline (APB). This modification provided additional funding for OFT #1 (by delaying aircraft modifications) but cut funding for OFT #2 in FY04 (funding used to complete remainder of aircraft modifications.) Subsequent program restructure and Total Obligation Authority (TOA) realignment provided full funding for the program, including OFT #2. GPS-A receiver controls were procured in FY03 and FY04. The Nav Table Update NRE occurred in FY04 with kit procurement and installations in FY05. Full Operational Capability (FOC) occurred December 2006.

Exhibit P-3a

MODIFICATION TITLE: E-6 MISSION SUPPORT(OSIP 007-02)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: The Mission Support program corrected Follow-On Test & Evaluation (FOT&E) (September 1998) deficiencies by funding design update and fabrication of new rewind machines and purchasing of "off-the-shelf" power carts to provide adequate aircraft power for full mission ground checkout. Mission Support upgrades the Frequency Referencing Auto Parallel Unit (FRAPU) to provide uninterrupted transfer of power from aircraft to ground systems. There were few rewind machines which were rapidly becoming unsupportable, resulting in the inability to replace the mission antenna at multiple locations when the Long Trailing Wire Antenna is lost. Power carts did not provide adequate ground power causing system shutdown and failure of critical system components on transfer from aircraft to ground power systems. The program also procures various ground support and Peculiar Support Equipment (PSE) for the E-6B aircraft.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Feb 03 procured "off-the-shelf" power carts. A Feb 2003 contract was awarded for NRE to update the design of rewind machines, to replace obsolete components with off-the-shelf technology, and to procure 1 unit; the remaining 3 units were procured in FY04. Planned procurement of PSE in FY07 and FY08. FRAPU NRE and purchase of 16 aircraft kits in FY09 with the installation of all kits in FY10.

MODIFICATION TITLE: SAFETY DEFICIENCIES(OSIP 008-02)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: Correction of safety deficiencies for the protection of personnel and equipment. FAA APA 19-98 requires a smoke detection system in the aircraft lower avionics bays. Safety replaces the APU crossover and exhaust ducts to prevent potential fire or explosion, replaces aircraft Kapton wiring and the Fuel Quantity Indicating System (FQIS) to comply with FAA SFAR 88 requirements, installs the Crash Survivable Flight Incident Recorder (CSFIR) to meet DoD requirements and replaces the aircraft acoustic thermal blankets to meet FAA requirements. Other safety modifications: corrected safety deficiencies in the aircraft auxiliary power unit (APU) which required a heat shield, replaced an uncertified Cartridge Activated Device (CAD) (explosive) for severing the long trailing wire antenna under emergency conditions, installed new improved inertia reels and shoulder harnesses, replaced unsafe fuel boost pumps to comply with FAA SFAR 88 requirements and replaced the current aircraft battery and charging system which was prone to thermal run-away. The program takes advantage of available and emerging commercial technology for crew/aircraft safety.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Smoke NRE in FY03 and FY05 with kit procurement in FY06 and installs in FY06-07. NRE for CAD completed in FY03; fabrication and installation completed in FY04. Inertia reels procured in FY03 with installation in FY05-06 at no cost using fleet resources. Fuel Boost Pumps completed in FY04. aircraft Battery/Charger NRE and kit procurement FY04 effort. APU heat shield completed FY05. APU crossover and exhaust ducts NRE in FY07 and kit buys in FY07 and FY08 with installation in FY07 and FY08 at no cost using fleet resources. Aircraft Kapton wiring NRE in FY07 with kit production and installation in FY08-09. CSFIR NRE in FY08 with kit buys in FY08 -FY09 and installation in FY09. FQIS NRE in FY08 with kit buys and installation in FY08-FY09. aircraft acoustic thermal blanket NRE in FY09 with kit buys and installation in FY09-FY11.

MODIFICATION TITLE: TECH INSERTION(OSIP 003-04)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: Tech Insertion fixes supportability/obsolescence issues, address interoperability issues, update systems and inserts new technologies into the E-6B platform. The E-6 aircraft have 35 individual computers dealing with communications and mission systems. Technology Insertion addresses supportability, new technologies, obsolescence, systems updates and interoperability issues in the areas of: Mission Computer Set (MCS), Flight Management Computer System (FMCS) and Mission Avionics Processing System (MAPS) hardware. The MCS is rapidly becoming unsupported. Intervention is required to ensure this mission critical system continues to operate. Also, the FMCS will become obsolete and needs to be upgraded in order to be supportable beyond FY08. The unsupported Standard Distribution Switching Unit (SDSU) provides mission critical timing throughout the aircraft and will be replaced with an off-the shelf unit (TFD8000.) The existing Secure Telephone Unit (STU) must be replaced with the Secure Telephone Equipment (STE) due to obsolescence. The mission critical MAPS is currently under development as part of the Block I program to replace the MCS and is expected to require Tech Refresh starting in FY10 in order to avoid COTS obsolescence issues during production.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: MCS update is divided into Spirals. Spiral 1, which added an uninterruptible power supply and replaced the current mechanical hard drive with a solid state device, completed in FY05. 85 HP motor kits were procured in FY04 with installation at no cost using fleet resources. NRE for Spiral 2, the Message Processing System (MPS), started in FY06, with kit buys in FY07; all obsolete equipment will be replaced in FY07. STE NRE in FY07 with NRE kit installation in FY08 and kit buys in FY08 with installation in FY09. KG-3X family crypto NRE and replacement kits will be provided by Air Force at no cost to Navy with installation occurring in FY10-FY11. Air Force will pay for two (2) installs and Navy will pay for the remaining fourteen (14) installs. FMCS Single Board NRE in FY07-FY08 with kit buys and installs in FY07-FY08. TFD8000 (SDSU) NRE in FY07 with kit procurement and installation in FY07 and FY08. The MAPS Technical Refresh will start with NRE in FY10; kit buys will occur FY11-FY13 and installs will start in FY12 and complete in FY14.

Totals may not add due to rounding

MCS requires no installation kits. But incurs install cost.

KG-3X does not require install equipment kits.

MCS Spiral 1: three install kits and three install equipment kits used for two trainers and a lab.

FMCS Single Board install kits not required. But incurs install cost.

MODIFICATION TITLE: SLEP(OSIP 003-07)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: Service Life Extension Program (SLEP) extends the E-6B service life to 2040+, based on extensive engineering analysis using modern analytic tools (Service Life Assessment Program – SLAP.) FY07& 08 NRE will be used for the Individual Aircraft Tracking System (IATS)and ECP generation. Full and open competition will be conducted in FY09 with contract award scheduled for FY10. The IATS will enable the fleet and program office to track the fatigue life expended on each E-6B aircraft. This tracking capability will identify the next critical fatigue damaged component that will need repair. It will also generate cost savings by allowing future modifications to be tailored to meet each aircraft's need and increases E-6B fleet availability for operational use. Current E-6B usage indicates modification must commence in FY10 to prevent the E-6B from being unable to perform its mission with the downing of more than two aircraft in 2016. There is a potential safety of flight issue due to unknown rate of deterioration of the E-6B airframe.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: FY04 RDT&E contract awarded for SLAP identified structural areas requiring rework. FY07 MS C for SLEP. SLEP contract award in FY09 with prototype installation in FY10. SLEP full rate production in FY10 with additional kits fabricated FY10-FY14. Installation ends in FY15.

Exhibit P-3a

MODIFICATION TITLE: COMMUNICATIONS (IP/T3) UPGRADE(OSIP 012-07)

MODELS OF SYSTEMS AFFECTED: E-6 SERIES TYPE MODIFICATION: Capability

DESCRIPTION / JUSTIFICATION: OSD PDM III directs funding to establish and maintain IP connectivity using various wideband communications links in support of command and control operations onboard the E-6B aircraft. It installs INMARSAT commercial satellite access for global communications connectivity (Phase 1); provides a Ku band transmit capability of 1-5 Mbps (Phase 2); removes the Utility Training Wire Antenna (UTWA) to provide weight and space margin for aircraft modifications (Phase 3); provides the Northstar Digital Ground Entry Point (GEP) capability for high speed UHF LOS communications (Phase 4); and provides a T3 transmit/receive capability and airborne cellular and communications cross banding capabilities to support domestic catastrophic events (Phase 5).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Phase 1 INMARSAT, Phase 2 Ku band transmit capability, and Phase 3 UTWA removal contract award and NRE in FY07 with NRE kit installation in FY08. Fifteen (15) production kit buys in FY08 with installs in FY08 (4 A/C) and FY09 (11 A/C). FOC FY09 (16 A/C). Phase 4 Digital GEP contract award FY08 with NRE and NRE kit install in FY08. Fifteen (15) production kit buys and installs in FY08. FOC FY08 (16 A/C). Phase 5 T-3 contract award in FY09 with NRE in FY09-FY10 and NRE kit installation (equipment kit and install kit) in FY10. Four (4) equipment kit buys in FY11-FY12 and 15 install kit buys in FY11-FY15. Installs FY12-FY16. FOC FY16 (16 A/C). The five (5) Phase 5 T-3 equipment kits will be "roll-on, roll-off", with all 16 A/C being modified to accept this equipment kit configuration.

DESCRIPTION: This line item funds modifications to the (11) VH-3D and (8) VH-60N Executive Helicopters. These aircraft are assigned to Marine Helicopter Squadron One to support the President of the United States. The VH-60N Cockpit Upgrade consists of an upgrade to all-glass instrumentation. The Communication Suite Upgrade consists of DAMA SATCOM radio upgrade, Digital FM radio upgrade, HF radio upgrade, the Presidential redundant secure communications upgrade, and Data Transfer capability upgrade. The VH-3D Lift Improvement program consists of the operational level installation of 55 composite main rotor blades on all eleven VH-3Ds. The VH-60N Structural Enhancement Program replaces critical aircraft structure during planned depot overhaul cycles. The Obsolescence Management Program will manage impending Executive Helicopter obsolescence issues. A variety of factors will be addressed including communication and navigation upgrades to remain mission relevant. The overall goal of the modifications budgeted in FY 2008 is to continue procurement efforts in accordance with the procurement strategy implemented during FY 2002.

The specific modifications budgeted and programmed are:
 *FY02 DERF funding augments OSIP 14-02, Communication Suite Upgrade

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

MODIFICATION TITLE: VH-60N COCKPIT UPGRADE(OSIP 009-02)

MODELS OF SYSTEMS AFFECTED: VH-60N TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: In order to meet the requirement of providing safe and timely transportation for the President, Vice President, and other parties as directed by the Director of the White House Military Office (WHMO), and in support of the alert and contingency mission requirement of the WHMO Operations Plan, the VH-60N aircraft cockpit must be upgraded to provide enhanced communication, navigation, and survivability capabilities while reducing pilot workload. The cockpit upgrade will be an all-glass instrumentation built around pilot, co-pilot, and Communications Systems Operator (CSO) Multi-Function Displays (MFD) and Control Display Units (CDU). A moving map display complete with terrain database should be incorporated, while maintaining the current capabilities of TACAN, VOR, ILS, ADF, TCAS, CSFIR, FM Immunity, Mode S IFF, ALE-47 and ALQ-144. The Survivability capabilities will provide a countermeasure dispenser and an infrared countermeasure system interface. The navigation system should include laser ring gyro Inertial Navigation Systems (INS) with embedded Global Positioning System (GPS)-(EGI) that has integrity monitoring/IFR. A color weather radar will be incorporated. Communication capabilities must be consistent with White House Communications Agency (WHCA) planning and National Security Agency (NSA) requirements. Three UHF/VHF/FM radios (ARC-210s) shall be included. Four FM radios and the HF with ALE currently on the VH-60N must be maintained. A coupled autopilot function shall be incorporated into the cockpit management system.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This ACAT IV-T program was approved in July 2001. Milestone B was approved November 2003. The program was re-designated as ACAT IV-M in November 2003. Milestone C was approved April 2006. Test bed aircraft modification and first kit procurement began in FY 2006. Installation of 1st production kit will begin in FY 2007. Development Testing is scheduled for FY 2007/8. Initial Operating Capability is scheduled for FY 2008 with Full Operating Capability scheduled for FY 2012.

MODIFICATION TITLE: VH COMM UPGRADE(OSIP 014-02)

MODELS OF SYSTEMS AFFECTED: VH-60N/VH-3D TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: The White House Military Office (WHMO) has directed the upgrade to the data transfer computer and printer on board the VH-60N, which is required to transmit, receive, and print secure data files via the SATCOM and HF radios. Satisfaction of the Data Transfer Computer/Printer requirement will require the procurement of a compatible TEMPEST certified data transfer computer and printer. WHMO has also directed that VHF FM radios operate in the APCO-25 digital mode. New radios must be procured in order to meet this requirement. JCS Directive MJCS-63-89 states that all users of UHF SATCOM shall have demand assigned multiple access (DAMA) capability. The White House Communication Agency (WHCA) has directed that all White House Military Organization (WHMO) elements be connected and have the ability to operate in the DAMA mode by 2005. Satisfaction of the DAMA SATCOM requirement will require the incorporation of two DAMA capable radios in each aircraft to satisfy the need for full duplex communication. An install kit will be built to house the radio, amplifier, and aircraft interface module, and then it will be installed in the aircraft as one unit. WHCA has also directed that all WHMO elements have the ability to operate in the High Frequency/Automatic Link Establishment (HF/ALE) mode by 2007. To meet the HF/ALE requirement, software modifications to the OFP must be completed to fully utilize all automatic link establishment (ALE) capabilities of the current HF radio. OFP software will be modified by NAWC-AD to allow new systems to work in the aircraft. The FM (YZ) radio replacement is required in order to have a redundant secure voice capability due to the obsolescence of the YZ radio system employed by White house Communication Agency (WHCA).

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: This program was approved as an Abbreviated Acquisition Program in July 2001. Program was upgraded to ACAT IV-M in March 2003. Digital FM capability was performed between FY 2003 through FY 2005, with a VAL/VER in FY 2004. The Data Transfer Computer/Printer capability modification has been performed between FY 2003 through FY 2005 with a VAL/VER in FY 2006. DAMA SATCOM upgrade will be performed between FY 2002 through FY 2009. DAMA SATCOM installations are performed in conjunction with scheduled depot maintenance. VAL/VER was performed on the delivery of the VH-3D (2005) and VH-60N (2006) DAMA SATCOM modifications. The HF/ALE modification will be performed between FY 2005 through FY 2009 with a VAL/VER completed in FY 2007. FM radio replacement will occur in FY 2008. All performance testing and EMC/EMI testing will be performed by NAWC-AD. VAL/VER will be performed by HMX-1 to ensure interoperability with all WHMO elements.

Exhibit P-3a

MODIFICATION TITLE: VH-3D LIFT IMPROVEMENTS(OSIP 011-06)

MODELS OF SYSTEMS AFFECTED: VH-3D TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: The VH-3D Lift Improvement program consists of the operational level install of 55 composite main rotor blades on all eleven VH-3D aircraft. These blades will improve performance allowing increased passengers and fuel loads. Composite blades reduce the torque required to hover and for level flight. Composite blades reduce vibrations and structural loads. The VH-3D is the only aircraft in the inventory using metal blades.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Flight test for the procurement of the VH-3D composite main rotor blades did take place in the 2nd and 3rd quarter of FY 2007. Procurement and operational install of these blades will take place in 2nd quarter of FY 08.

Exhibit P-3a

MODIFICATION TITLE: VH-60N STRUCTURAL ENHANCEMENTS (OSIP 016-08)

MODELS OF SYSTEMS AFFECTED: VH-60N TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: The VH-60N Structural Enhancement Program replaces critical aircraft structure during planned depot overhaul cycles. VH-60N airframe cracks have been identified and repaired by depot contractor both during scheduled Special Progressive Aircraft Rework (SPAR) and unscheduled/unplanned maintenance at HMX-1. These cracks and the required repairs will significantly extend aircraft out of service time, reducing aircraft availability and impacting HMX-1's ability to support White House Military Office missions.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Non-recurring engineering will begin in the 1st quarter of FY 2008. Kit procurement will commence in time to meet the installations, which will be performed in conjunction with planned SPAR periods starting in the 3rd quarter of FY 2009.

DESCRIPTION:

The Special Projects program modifies and/or replaces obsolete intelligence collection equipment as required in (6) P-3 aircraft. Procurements vary in each fiscal year and include common Navy systems for increased capability, reduced operator workload and common logistics. Active Primary Aircraft Authorization inventory is 4 with additional 2 Backup Aircraft Authorization aircraft in the Special Mission inventory. A total of 6 aircraft have been delivered. The specific modifications budgeted and programmed are:

	PRIOR YEARS	ID Code	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL
QUANTITY												
COST (In Millions)	149.8	A	45.1	35.8	57.2	68.2	51.1	45.4	48.3	47.0	373.9	921.9

DESCRIPTION: This line item funds modifications to T-45A aircraft. The T-45A Goshawk is a tandem-seat, carrier capable derivative of the existing British Aerospace Hawk aircraft powered by a single Rolls Royce Adour engine. It serves as the aircraft component of the T45TS integrated jet pilot training system which replaces the three decade old TA-4 and T-2 technology. The overall goal of the modifications budgeted in FY 2008 is to correct discrepancies and deficiencies discovered after delivery of the aircraft and to commence upgrades to the aircraft cockpit and navigation systems. FY03 funded simulator is an analog conversion and supported production aircraft that was delivered to Kingsville in FY04. T-45 aircraft and simulators are facing critical avionics obsolescence and Diminishing Manufacturing Source (DMS) issues. OSIP 08-95 (Corrections Of Deficiencies) was established to resolve safety and reliability issues, improve required mission capabilities, and increase service life of aircraft components. OSIP 03-03 (Engine Surge) was established to resolve engine surge critical safety issue. OSIP 17-04 (Avionics Obsolescence) was established to convert the T-45As (analog) to the digital T-45C configuration (Required Avionics Modernization Program (RAMP)). OSIP (02-06) (Synthetic Radar) was established because the T-2/T39 are going to be divested in 2006/2013 and the training command cannot complete Undergraduate Military Flight Officer (UMFO) training. No new Type Model Series will be developed to pickup this requirement, as a result, the T-45 will modify 30 aircraft to incorporate Synthetic Radar Training into curriculum. OSIP 13-06 will fund the Non-recurring Engineering (NRE) associated with modification of the Airborne Data Recorder (ADR) to provide a Crash Survivable Memory Unit (CSMU). The CSMU will assure flight incident data is available after an aircraft mishap to assist in reconstructing the cause of mishaps.

The designed service life of the aircraft is 14,400 hours with the average remaining service life of inventory aircraft estimated at 6,692 hours.

MODIFICATION TITLE: T-45TS CORR OF DEFIC(OSIP 008-95)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: Safety, Reliability, Increased Service Life, Improved Mission Capabilities

DESCRIPTION / JUSTIFICATION:

EJECTION SEAT CHANGES: Modifications will enhance aircrew safety. Modifications include pilot tube covers, changes to the ejection sequencer, ejection seat handle modification and rail system.
UNCOMMANDED GEAR EXTENSION: MDA-T45TS-TBDs Modification will increase travel of the landing gear control interconnect cable, increase cable friction, and change the gear selector valve actuation signal to only when the handle is in the full up or full down position. Installation of this ECP is in response to a T45TS Engineering Investigation that documented a deficiency and proposed recommendations relating to incidents of uncommanded landing gear extensions.
GROUND TRAINING SYSTEMS: Updates to the T-45 aircraft simulator will be made to match evolving aircraft configurations/modifications and flight characteristics/software/academics enhancements to improve training capabilities.
AIRFRAME ECPs are divided into two categories; Structural and Systems.
STRUCTURAL ECPs: Modifications will incorporate changes to improve structural details to increase aircraft service life to 21,600 flight hours. During FSD testing of the T45 aircraft it was determined that incorporation of redesigned components applicable to the critical load paths will significantly increase the service life of the aircraft. This structural portion of this OSIP effects several structural components to include Wing Dolly, SS 02 Monitor Bracket, Horizontal Stabilizers, Frame 24 Crossbeam Lugs, Wing Leading Edge Redesign, Frame 29 Lower Flange, Uplock Beam Forward Attach, Slat Track Rib 5 Downstop Bolt, Frame 28/32 Boundary/Vertical Fin, Frame 33 Structure, Inlet Close-Out Fuel, Airframe Engine Mount, Frame 21 Structure, MLG Bay Tilted & Fasteners, Longitudinal Systems Viscous, Frame 20 Structures, Frame 12 Vertical Splice, Frame 1 Structures and ballast provisions, NLF Trunnion Beam, Slat Actuator Fitting Angle, Structure Life Improvement, Speed Brake, Engine Mount Link Option, Stabilizer Back-Up Structures, Fuselage/Frame 10 Door, and Fin Bracket Lever Box Assembly, Over Center Locking Mechanism.
SYSTEMS ECPs: Modifications to the airframe other than structural deficiencies are also required to ensure safety of flight, aero-performance and maintainability to enable satisfactory PTR levels. This Airframe OSIP affects several airframe components and their sub-assemblies including: forward, center and aft fuselage components, landing gear, tail cone, wing, horizontal and vertical control surfaces, flaps, canopy/windscreen, hydraulic system, oxygen system, electrical system, fuel system, throttle, instrumentation systems, environmental controls, communications, navigation, and emergency systems.
AVIONICS: Modifications to the Avionics will be required to update the Display Unit, Heads Up Display, Global Positioning System and Inertial Navigation Assembly to enhance effectiveness of pilot training and avoid obsolescence. The following ECP's are part of the Avionics package of the aircraft and include: Air Data Recorder/Signal Data Computer/Advanced Signal Data Computer, Almanac Loading System, Mission Computer, communication systems, navigation systems and GPS and inverter.
ENGINE/POWER AND PROPULSION: Modifications under this category include modification to the Engine, Gas Turbine Starter, and Electrical System which will increase the reliability, maintainability and safety of these systems. Engine modifications include Engine Mounts, Fuel Pumps, Combustion Chamber, Compressors, Nozzle Guide Vanes, Drive Systems, Oil System, Air Systems, Turbines, Fuel Distribution and Control and modifications to address engine surge/compressor stall. Gas Turbine Starter modifications include updating the starting system with solid state circuitry and incorporation of a new turbine wheel. Electrical modifications include incorporation of generator improvements and wiring modifications.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: T-45 aircraft achieves 14,400 flight hour aircraft service life limit with incorporation of Frame 33 structure modification. Non-recurring efforts to increase aircraft service life to 21,600 flight hours commences in FY09.

Exhibit P-3a

MODIFICATION TITLE: IMPROVEMENT DIRECTIONAL CONTROL(OSIP 011-02)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: Safety

DESCRIPTION / JUSTIFICATION: Loss of Directional Control during high speed ground rollout has resulted in six Class A T45 mishaps. The proposed modification will significantly improve the Ground Handling characteristics by improvements such as: Providing yaw rate feedback to the nosewheel steering system and the (SASS) Stability Augmented Steering System. This improvement will make external forces less influential on yaw rates, and provide for lower susceptibility to pilot induced oscillations.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Non-recurring engineering efforts associated with this modification were conducted during FY02. Kit procurement commenced in FY03 and installations began in FY05.

MODIFICATION TITLE: ENGINE SURGE(OSIP 003-03)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: Engine Surge: T-45 engine surge is a critical safety concern for a single engine aircraft with over 195 surge events documented. Kits include modifications to airframe, engine, and fuel control system.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Funding was provided to correct T-45 F405 engine surge. Non-Recurring Engineering efforts started in FY03. Kit procurement began in FY07.

MODIFICATION TITLE: T-45TS GPS(OSIP 010-04)

MODELS OF SYSTEMS AFFECTED: Analog Cockpit TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: Congressional requirement that all DoD aircraft be capable of navigating via Global Positioning System Inertial Navigation Assembly (GINA) to support T45TS mission to train the next generation of warfighters in the use of INS, GPS, and GPS/INS hybrid systems by the end of year 2005. A retrofit program will incorporate GPS in the existing Analog aircraft. There are currently 73 aircraft that will be retrofitted. Kits in 2010 through 2013 address obsolescence issues for the entire fleet.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Kits deliveries and installations began in FY06.

MODIFICATION TITLE: AVIONICS OBSOLESCENCE(OSIP 017-04)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: T45TS is facing critical obsolescence/performance issues. Components of various avionics boxes will not be supportable as a result of Diminishing Manufacturing Source issues that result in part obsolescence or supplier mortality. RAMP will resolve obsolescence issues with such items as the Global Positioning Inertial Navigation Assembly (GINA) (FPGA and processor), Mission Display Processor (MDP) (Diode), Display Processor (Diode), Airborne Data Recorders (Line in Buffer Amplifier), Display Unit, Signal Data Computer, Azimuth Computer and various other avionics components.

The Required Avionics Modernization Program (RAMP) is the Analog to Digital conversion of the T-45A aircraft. The RAMP effort consists of a Glass Cockpit upgrade consisting of two Multi-Function Displays per cockpit, mission display processor, recorder, associated cockpit controls and a 1553 digital, integrating them with the existing head-up display (HUD), the airborne data recorder, and a separately procured Global positioning system inertial navigation assembly.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: FY03 provided funding (OSIP 16-96) for 1 Simulator conversion and OSIP 17-04 provided FY04 funding for DMS/obsolescence risk mitigation efforts.

Exhibit P-3a

MODIFICATION TITLE: SYNTHETIC RADAR(OSIP 002-06)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: With the T-2 and T-39 divestiture in 2008 and 2013 respectively, the training command cannot complete UMFO training. No new Type Model Series will be developed to pick up this requirement. As a result, the T-45 will modify 19 aircraft to incorporate Virtual Mission Training System into the curriculum. The effort will include two phases of integration to incorporate a commercial off the shelf synthetic radar system into the T-45. Phase I includes determining the integration requirements for the air-to-air (A/A) and minimal air-to-ground (A/G) synthetic radar capabilities and completing the T-45 integration effort. Phase II includes determining the integration requirements for increased A/G fidelity simulation and weapons sensors simulation while also completing the Phase II integration effort. Two prototype kits will be utilized for testing.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: FY07 provides funding for NRE, FY08-10 provides funding for NRE and 21 kits.

FINANCIAL PLAN: (TOA, \$ IN MILLIONS)

Exhibit P-3a

MODIFICATION TITLE: CRASH SURVIVABLE MEMORY UNIT(OSIP 013-06)

MODELS OF SYSTEMS AFFECTED: T-45TS TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: The T45 Airborne Data Recorder is not a crash survivable recorder. As a result, flight incident data may not be available after a mishap to assist investigators in reconstructing the cause of the mishap. T45 should have a modern state of art crash survivable unit to assure critical data is preserved.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Non-Recurring Enigneering began in FY2006.

DESCRIPTION: This line item funds modifications to all in-service aircraft engines. Power Plant Changes are required throughout the service life of each aircraft to correct flight deficiencies and improve operational readiness while reducing engine operating costs. This program finances the procurement and installation of retrofit kits for all Navy and Marine Corp aircraft engines and related propulsion hardware such as propellers, starters and transmissions. The overall goal of the modifications budgeted in FY 2008 is to continue modification efforts previously initiated on the engines for the AV-8B, S-3, H-60, E/A6-B, A-6, AH-1W, F-5, F/A-18E/F, H-46, H-3, C-2, E-2, H-53, MH-60, C-130, F/A-18C/D, T-2, P-3, VH-60, UH-1N, T-45, F-16 and V-22 aircraft.

The following depicts the current funding levels budgeted and programed for Power Plant Changes:

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

MODELS OF SYSTEMS AFFECTED: Power Plant Changes MODIFICATION TITLE: POWER PLANT CHANGES(OSIP 040-00)

INSTALLATION INFORMATION: The tables below list the quantities, installation schedules, and costs for those ECPs for which there is an installation cost. Of those ECPs with installation costs, three are not shown as they are labor-only modifications and require no kit. The reason they are not shown in these tables is that the procurement quantity and installation quantities would not be equal.

METHOD OF IMPLEMENTATION: Current with engine/module repair (where installation cost is zero), or by forced retrofit (shown below).

ADMINISTRATIVE LEADTIME: Average of 6 Months PRODUCTION LEADTIME: Average of 12 Months

DESCRIPTION: This line item funds modifications to T-6 aircraft. The T-6 Texan II is a tandem-seat, turboprop aircraft derivative of the Pilatus PC-9 aircraft powered by a single Pratt & Whitney PT6A-68 engine. It serves as the aircraft component of the JPATS integrated primary pilot training system which replaces the T-34C primary training aircraft. The overall goal of the modifications budgeted in FY 2008 is to correct discrepancies and deficiencies discovered after delivery of the aircraft, maintain joint configuration with Air Force aircraft and the joint program. It also incorporates major upgrades to the aircraft cockpit, navigation system, and aircrew life support system (ALSS).

Exhibit P-3a

MODIFICATION TITLE: JPATS CORRECTION OF DEFICIENCIES(OSIP 011-04)

MODELS OF SYSTEMS AFFECTED: T-6A TYPE MODIFICATION: PS Safety

DESCRIPTION / JUSTIFICATION: * Corrections to discrepancies found during testing and evaluation can sometimes be incorporated into production aircraft, effective with the physical configuration audit which establishes the product baseline of the aircraft. However when this cannot be done due to time constraints, retrofit of the changes into already delivered aircraft requires funding through the Aircraft Modification Program. Additionally, deficiencies discovered during Fleet operations must be corrected. The unacceptable alternative to retrofitting would be multiple configurations in the Fleet, which creates maintenance and supply problems, and in many cases the mission capability of the aircraft would be adversely affected as well as reduced service life. Corrections to the following items/conditions are required:

VHF radio ECP (ECP-055) Provide for the correction of volume and reception level discrepancies. Current volume inequities between the UHF/VHF radios make the radio unintelligible and a safety concern for aircrew.

Nose Wheel Centering (ECP-052) Safety modification to provide positive nose wheel centering inflight. Category 1 Deficiency, MLG door tie rods Retrofit of improved durability MLG door tie rod.

MLG Sidebrace Redesign (ECP-059) Re-work of existing MLG drag link. Improve grease fitting access to maintainability improvement.

Oil Pressure Warning Safety modifications to correct oil pressure cockpit warning indications and associated systems to improving aircrew situational awareness and overall systems operation.

OBOGS upgrades (ECP-049) Safety modifications to improve the normal and emergency aircrew oxygen supply systems. Mods address increased supply, delivery control box and software logic corrections.

Trim System Redesign Safety modification to reduce trim actuator force limit, decrease activation speed. Results in shorter landing distances.

Braking (anti-skid) Safety modification to improve the short field abort and stopping distances of the aircraft through the introduction of improved tires and braking system.

NACWS replacement Safety modification to replace the obsolete and unsupported Naval Aircraft Collision Warning System (NACWS) due to FAA changes in the National Airspace System.

Ejection Mode Selector Modifies Interseat Sequencing System (Ejection system) to add two additional modes allowing command ejection authority designated to each seat.

ASV Regulator/EL Panel Safety modification addressing excessive force required to breathe utilizing current Anti-Suffocation Valve (ASV). This Correction will solve unconscience aircrew air supply requirements. In addition, a safety modification will replace the current EL Panel to increase the oxygen regulator blinker visibility at night. Deficiency noted during OPEVAL.

Landing Gear Doors & Bellcrank Structural fixes to gear doors & bellcrank to eliminate cracking.

UWARS addition to ejection seat Safety modification to add UWARS to Ejection Seat. Current system lacks UWARS, restricting overwater flight operations.

Acceptance of Ground Power (ECP-056) Operational modification to allow acceptance of electric power commercial ground power carts.

Life Raft Addition to Ejection Seat Safety modification to install Life raft to ejection seat and incorporate URT-140 radio. Current system lacks raft, restricting overwater flight operations.

Cockpit Improvements (ECP-058/063) Safety and Human Factors modification to the cockpit to improve aircrew efficiencies and to eliminate excessive pilot workload and other dangerous situations. Modifications include rearview mirrors, improved cockpit storage, improved night lighting, reducing excessive ambient noise, improved trim relays, open avionics wire bundles, communication audio volume solutions, nose wheel position/positioning systems and flight instrument display issues.

Increase Gross Weight Structural mods to increase weight capacity. Need driven by weight additions for Anti-Skid, Life Raft, Oil Pressure warning system.

OBOGS Low Pressure Switch Safety modification to improve OBOGS low pressure switch. In-flight failures have caused numerous aborts.

Condenser blower motor-longer life Replace air conditioning blower with longer life, brushless motor, reducing life cycle costs

Supplemental Oxygen System Safety modification to increase volume of emergency oxygen. Class A safety board recommendation.

GPS receiver upgrade-LAAS/WAAS Operational upgrade to GPS system-allows aircraft to utilize LAAS/WAAS approaches.

Engine PMU upgrade Operational modification to fix engine power management unit (PMU) software. Mod required to eliminate hot-start abort conditions.

ANTI-G valve replacement Safety modification to improve Anti-G valve with rust resistant valve. Rusty valves have caused numerous inflight emergencies (loss of pressurization)

Avionics Obsolescence Replace various Avionics components due to supplier and/or technical obsolescence.

Aft Fuselage Structural Upgrade Add structural components to strengthen the AFT Fuselage to address minor cracks and rivets coming loose and/or breaking in the area of Frame 9 and the Ventral Fins. This is both a safety and maintainability issue.

Sealed Rudder Position Sensor Replace the current Rudder Position Sensor which has an excessively high failure rate due to water intrusion into the unit resulting in inaccurate information being provided to the flight data recorder. Erroneous data negatively impacts the structural integrity/FLE monitoring program because rudder position affects tail loading (asymmetric g's) and accident/incident replay and investigation.

Engine Oil Dipstick and Bottle Enhance the Engine Oil Dipstick and add a Collection Bottle which will allow a higher total engine oil volume to provide an allowable range for safe operation. This effort is a direct response to a Navy Class B engine incident.

MFOQA Improve the flight data recorder, change the data cartridge adapter, and install a larger capacity data storage module (PCMCIA) to allow for participation in the Military Flight Operations Quality Assurance (MFOQA) Program. MFOQA is part of a DoD-wide safety emphasis.

Emergency Locator Transmitter DoD mandated installation of a 121.5/406 MHz ELT system in the T-6 to replace the current 121.5/243 MHz emergency beacon.

Communications Cord/Oxygen Hose Replace the current T-6 single Line Replaceable Unit (LRU) Communications Cord and Oxygen Hose with a Communications Cord and Oxygen Hose that consists of two (2) separate LRUs.

Unique Identification (UID) Per MIL-STD-130M dated 2 Dec 05 and the DoD Unit Identification Guide, each T-6 will be marked with a two-dimensional PDF214 or equivalent machine-readable unique identification (UID).

Canopy Fracturing Initiation System (CFIS) Redesign Safety related modification will replace the current T-6 laser system CFIS with an electro-mechanical CFIS that will improve reliability and reduce life-cycle costs.

Avionics Upgrade Program (AUP) Upgrade T-6 avionics to include multifunctional displays controlled by two (2) redundant Integrated Avionics Computers (AICs), add a Heads-Up Display (HUD) to the front cockpit, a radar altimeter and additional navigational capability.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Feb 93 received MS 0 and MS I approval, Aug 95 received MSII and LRIP approval, Dec 01 received MS III approval, and Navy IOC occurred 4th Qtr FY03.

DESCRIPTION:

The specific modifications budgeted and planned are:

- (1) Detector installation on rotary and cargo aircraft to identify the presence of chemical warfare (CW) vapors.
- (2) The addition of the Mobile Aircrew Restraint System (MARS) to helicopters. MARS will replace existing fixed length tether with a locking retraction system that allows safe movement of the aircrew within the cargo area while affording protection during a mishap or combat. MARS will be mounted to the aircraft overhead.
- (3) Installation of new aircrew endurance modifications in legacy ejection seat equipped aircraft due to extended range missions.
- (4) Installation of new aircrew endurance modifications in non-ejection seat equipped aircraft due to extended range missions.
- (5) Installation of the Joint Helmet Mounted Cueing System (JHMCS) night mission system into tactical aircraft. This will provide the ability to cue and display weapons and sensors at night using a narrow field of view Night Vision Device (NVD) that integrates the JHMCS cueing and display symbology and scene viewed through the NVD.

MODIFICATION TITLE: CW DETECTORS(OSIP 002-05)

MODELS OF SYSTEMS AFFECTED: AH-1W/Z-CH-53-KC-130J/T-MH-60S-MV-22B-UH-1N/Y TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Installation of the Joint Chemical Agent Detector (JCAD) will automatically and simultaneously detect, identify and qualify CW agent vapors by agent classes (e.g. nerve, blister and blood agents). The JCAD Detectors will be provided to NAVAIR by the Joint Chemical Biological Defense Program (CBDP) office. The CH-53 installation has 2 JCADS per platform. Installation of the Joint Service Lightweight Standoff Chemical Agent Detector (JSLSCAD) on the CH-53 will provide standoff detection of CW agents at a distance of 0-5 km. The CH-53 installation has 1 JSLSCAD per platform.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: JPEO (CBD) MS-C for JCAD detector is planned for 2nd QTR FY07. All CW Dector CH-53 installation equipment will be provided to NAVAIR by CBDP procurements. The kits for each platform are unique. The first two kits for each platform will be for validation and verification and installed the same year. The additional kits will follow the schedule below.

Exhibit P-3a

MODIFICATION TITLE: MARS(OSIP 001-07)

MODELS OF SYSTEMS AFFECTED: C-130/H-46/CH-53D/MV-22B/H-60S/H-60R/MH-53E/CH-53E/UH-1Y TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Safety initiative to replace the existing mobile crewmember safety belt with the Mobile Aircrew Restraint System (MARS). The new MARS design increases crash survivability by providing improved aircrew restraint with the cabin through the use of a "g" and velocity sensitive locking mechanism and crewmember harness. The MARS retractor systems and associated aircraft installation modifications will be procured and provided to the NAVAIRSYSCOM by the PMA 202 office.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: MS-C for MARS installation in large cabin a/c planned for 3rd Qtr FY10. Small cabin (H-60R) is in production.

Exhibit P-3a

MODIFICATION TITLE: EJECTION SEAT ENDURANCE(OSIP 001-08)

MODELS OF SYSTEMS AFFECTED: AV-8B/EA-6B/F/A-18/B/C/D/T-45/TAV-8B TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: New cushion systems in front line ejection system equiped aircraft. Incorporates phase changing textiles and "rate dependent" materials to reduce significant aircrew fatigue being experienced during long duration flights. New cushions will be integrated into complex ejection seat designs to eliminate interference. There are no installation costs because the seat cushions are just being replaced. EA6B requires rerouting of the aircraft system, so it is the only platform that needs installation kits.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Milestone C is planned for 2nd QTR FY08.

FINANCIAL PLAN: (TOA, \$ IN MILLIONS)

MODIFICATION TITLE: NON-EJECTION SEAT ENDURANCE (OSIP 004-09)

MODELS OF SYSTEMS AFFECTED: H-60/H-53/UH-1/TH-57/E-2/CH-46 TYPE MODIFICATION: SAFETY

DESCRIPTION / JUSTIFICATION: Introduce new cushion systems into "non-ejection" aircraft with phase changing textiles to reduce/eliminate significant aircrew fatigue due to longer mission requirements. There are no installation costs.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Milestone C is planned for 2nd QTR FY09.

Exhibit P-3a

MODIFICATION TITLE: AN/AAR-47 DETECTION(OSIP 072-88)

MODELS OF SYSTEMS AFFECTED: CH-46E, CH-53A/D/E, RH-53D, MH-53E, UH-1, AH-1, C 130, P-3, HH-60H, SH-60B, VH-3, VH-60, V-22 TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: The AN/AAR-47 warns of approaching missiles by detecting radiation associated with rocket motor ignition and automatically initiates flare ejection. Detection algorithms are used to discriminate against non-approaching radiation sources. The AN/AAR-47 is a passive missile approach warning system consisting of four sensor assemblies housed in two or more sensor domes, a central processor unit and a control indicator. The AN/AAR-47 provides attacking missile declaration and sector direction finding and will be interfaced directly to the ALE-39/47 countermeasures dispenser. Without the AAR-47, helicopters and Fixed Wing Aircraft have no capability to detect an infrared missile attack.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Milestone II was passed in 1982. OPEVAL (on the CH-53E) was passed in October 1986.

Milestone III was passed in May 1987 for full production with extension of application to all other platforms. Production of 709 systems and preparation of a Level III data package followed, with deliveries completed in early 1992. Under full and open competition, a contract for up to 1200 systems was awarded to Hercules (now Alliant) in December 1991. Actual orders were for 1122 systems with deliveries completed in January 1997. Under full and open competition, a contract for up to 1077 systems was awarded to Lockheed Martin in September 1995. Deliveries began in January 1997 and were completed in July 1999.

There are two upgrade programs: FY-97/98/99 funded a microprocessor upgrade to replace the 8086 board with an 80486 running new software to enhance threat declaration and to better control false alarms. This software delivers the maximum performance attainable using current sensors. FY 2006 and beyond also funds a sensor upgrade. The current sensors are starting to wear out after 5 years, due to temperature sensitive materials. The new sensors will remove this limitation and will also provide improved performance. This will allow the AAR-47 to better respond to new threats via software changes only. Both upgrades are 100 percent retrofit. There are 2500 systems for installation on all applicable aircraft. TEMP#543 documents the current requirement.

MODIFICATION TITLE: AN/APR-39(V)2 RWR(OSIP 014-90)

AN/APR-39(V)2, AH-1W, AH-1Z, UH-1N, UH-1Y, HH-60H, CH-53D/E/HM-53E, KC-130F/R/T, VH-3D, VH-60N, SH-60B, MV-22, AN/V4-2/2 (V), VH-3, VH-50, SH-60R, MH-60S

MODELS OF SYSTEMS AFFECTED: _____ TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: The AN/APR-39A(V)2 Radar Signal Detecting Set (RSDS) is designed for use on US Marine Corps, US Navy, and US Army Assault Support aircraft to provide onboard warning of radar threats. The AN/APR-39A(V)2 provides control and display of the entire Assault Support Equipment (ASE) Suite, and is required for control and display of the AN/AVR-2/2A(V) and the AAR-47. The system consists of five antennas, one Cockpit Control Unit, one or two Display indicators, two to four receivers, and one processor. The AN/AVR-2/2A(V) laser detection set (LDS) is designed for use on U.S. Army, U.S. Marine Corps, and U.S. Navy Assault Support aircraft. The AN/AVR-2/2A(V) reduces the susceptibility of helicopters to attack from laser guided and laser aided threats by providing warning of laser illumination. The system consists of four to six sensor units and one or two comparators. The system requires the APR-39A(V)2 Cockpit Control Unit for On/Off and BIT. AVR-2/2A(V) warnings are displayed on the APR-39A(V)2 cockpit display.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The U.S. Army awarded a production contract for the AVR-2 in FY 1990 and for the AVR-2A(V) in FY 1994. Procurement for the U.S. Marine Corps and the U.S. Navy is via Military Interdepartmental Purchase Request (MIPR) to the U.S. Army. The AN/APR-39A(V)2 is in the production phase of development (MSIII 3Q/96). The U.S. Navy is the lead service of this joint service program. The U.S. Army awarded the production contract 3Q/96, and continues to administer the contract. U.S. Navy delivery of production systems commenced June 1999. Procurement of an AN/AVR-2/2A(V) in the AN/APR-39(V)2 for the additional requiring platforms will be by extension of application with the required follow-on test and evaluation conducted on each platform. Version B of AN/APR-39A(B/V)2 is glass cock-pit compatible for H-1 upgrades.

MODIFICATION TITLE: ALE-39 to 47 RETROFIT(OSIP 006-00)

F-14B/D(114), CH-53E(148), EA-6B(80), AH-1W(180), CH-46E(202), UH-1N(86), KC-130FRT(25), CH-53D(36), MH-53D(34), F/A-18C/D(184), AV-8B(133)

MODELS OF SYSTEMS AFFECTED: _____ TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: The replacement of the AN/ALE-39 Dispenser System with the AN/ALE-47 Dispenser System will correct some serious safety problems and greatly improve aircraft survivability. The AN/ALE-39 system has serious problems with Things Falling Off Aircraft (TFOA) as well as numerous occurrences of uncommanded firing of chaff and flare stores. The reliability of the ALE-39 is another major factor with continuous reports of hung or unfired stores, a serious ground safety concern as well as serious aircraft survivability concern. The AN/ALE-47 System has been developed to correct the safety issues of the ALE-39. USD(Acq) memo of November 1986 directed U.S. Navy and U.S. Army to participate in EMD phase. Requirements established by Air Force Statement of Operational Requirements Document (SOR) number 341.88-aa-D of 8 July 92. OSIP 006-00 had been cancelled beginning FY04, but operational requirements in support of the Global War on Terrorism have resulted in accelerated installs and additional aircraft being identified for retrofit incorporation.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The AN/ALE-47 System is in production and being installed in multiple U.S. Navy and Marine aircraft. MS III decision awarded March 1993. FY 2000 systems procured under Air Force contract F09603-01-D-0367. Future procurements to be ordered under U.S. Air Force production contract to be awarded in September 2006.

Exhibit P-3a

MODIFICATION TITLE: INTEGRATED DEFENSIVE ELECTRONIC COUNTERMEASURE (IDECM)RADIO FREQUENCY COUNTERMEASURE (RFCM)(OSIP 007-03)

MODELS OF SYSTEMS AFFECTED: F/A-18E/F TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: IDECM RFCM consists of an Onboard Electronic Countermeasure Set and Fiber Optic Towed Decoy (FOTD) that improves the survivability of aircraft against modern RF threats. The IDECM RFCM Operational Requirements Document (ORD) numbers are 494-88-98, 544-88-00 and 624-78-03. Current IDECM RFCM configurations are: Block 1 (IB-1) consisting of the ALQ-165 and ALE-50 (AAED); IDECM Block 2 (IB-2) consisting of the ALQ-214 and the ALE-50 (AAED); IDECM Block 3 (IB-3) consisting of ALQ-214 and the ALE-55 (FOTD). This Operational Safety Improvement Program is for the onboard portion of the IDECM Block 2 and 3 configuration.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: IDECM Block 2 received MS III approval in January 2004. FRP 1,2 and 3 were awarded in FY04, FY05 and FY06 respectively. Annual production contract awards are expected to continue until the total inventory objective of 424 systems have been procured.

MODIFICATION TITLE: ALQ-157(OSIP 014-06)

MODELS OF SYSTEMS AFFECTED: CH-46E, CH-53D, KC-130T AND KC-130J TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: In the late 1970's and early 1980's, the AN/ALQ-157 was developed and qualified in order to provide protection to heavy/medium lift helicopters and KC-130's from infrared guided missiles. The system was produced and deployed from the mid 1980's through 1992. During the initial deployments in 1991 several failures were identified that impacted the mission readiness of the employing platforms.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: The reliability and maintainability upgrade was initiated in 2004 in order to address the reliability issues caused by the identified failures in support of Operation Enduring Freedom and Operation Iraqi Freedom. Also addressed were parts obsolescence issues with the high failure rate items that would severely impact the ability to maintain the system in operating condition.

MODIFICATION TITLE: DIRECTED INFRARED COUNTERMEASURE (OSIP 005-08)

MODELS OF SYSTEMS AFFECTED: UH-1Y;MU-22;CH-53E;HLR;MH-60R;MH-60S;AH-1Z TYPE MODIFICATION: MISSION CAPABILITY

DESCRIPTION / JUSTIFICATION: CH-53E - Urgent Global War On Terrorism (GWOT) requirement to provide aircraft survivability against Infrared Surface-to-Air Missile (IR SAM) threats for USN/USMC rotary wing aircraft in support of Operation Iraqi Freedom and Operation Enduring Freedom. This funding is for the B-kit procurement of a Directed Infrared Countermeasure (DIRCM) capability (FY2008-FY2012) until the next generation DIRCM is produced beginning FY2012 with Low Rate Initial Production (LRIP). This capability will increase survivability against current and next generation infrared threats.

The Assault DIRCM Program consists of a Missile Warning System (MWS) and an Infrared Jammer.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES: Assault DIRCM Program MS B is scheduled for 3rd quarter FY2008. A System Development and Demonstration (SDD) contract award is scheduled for the 3rd quarter of FY2008. MS C is scheduled for 3rd quarter of FY2011. A Full Rate Production Decision Review is scheduled for the 1st quarter of FY 2013 with Initial Operating Capability (IOC) planned in FY2014.

COST (In Millions)	1,197.6	A	175.1	176.8	148.8	150.7	145.8	140.4	143.8	147.3	486.6	2,912.9
<p>This line item funds common avionics equipment for multiple aircraft. With the exception of OSIPs 43-94 (Flight Data Recorders), 14-97 (KC-130T GPWS), the individual aircraft platforms fund the "A" kits and installation in the appropriate aircraft line.</p> <p>The specific modifications budgeted and programmed are: (1) The NAVSTAR GPS (Global Positioning System) is designed to provide a highly accurate passive position (16 meters) velocity (0.1 meter/sec) and time to users worldwide in all weather conditions. The GPS will interface with communication, navigation, and weapon systems equipment (standard attitude heading reference systems, inertial navigation systems, on-board computers, etc.) in selected applications. GPS is a DoD mandated requirement for all aircraft operating in the National Air Space System after the year 2000. (2) The AN/ARC-210 Electronic Protection (EP) Combination Radio provides dual UHF capability for CV based TACAIR; VHF AM for close air support and maritime channels; VHF AM for air traffic control; and EP capabilities. The AN/ARC-210 can be controlled by either a remote control unit or via MIL-STD-1553 multiplex data bus. (3) The Crash Survivable Flight Incident Recorder (CSFIR) is a crash hardened recorder which will be used in support of aircraft mishap and incident investigations. (4) The Ground Proximity Warning System (GPWS) provides visual and aural warnings to the pilot when the aircraft is in conditions that could result in a controlled flight into terrain accident. (5) The Traffic Alert & Collision Avoidance System (TCAS) will provide a display of situation awareness to aid in the prevention of mid-air mishaps. (6) The Advanced Mission Computer and Display (AMC&D) system will replace existing aging/obsolete and performance limited AN/AK-14(V) Mission Computer and Contractor Furnished Equipment Displays. (7) The Tactical Air Moving Map Capability (TAMMAC), the common solution for US Naval Aviation, provides a common tactical aircraft moving map and data loading capability and replaces current obsolete Fleet equipment. (8) Communication Navigation Surveillance/ Air Traffic Management (CNS/ATM) provides civil upgrades to communications, navigation, and surveillance systems enabling shift from Air Traffic Control to Air Traffic Management in increasingly congested airspace and frequency spectrum. (9) Aircrew Wireless Internal Communications System (AWICS) will provide a wireless, spread spectrum intercom system to allow for unimpeded movement throughout the aircraft and prevent aircrew/passenger entanglement with intercom system cords in the event of mishap. (10) Attitude Gyro Upgrade replaces obsolete gyros with a more reliable and maintainable gyro. (11) Military Flight Operations Quality Assurance (MFOQA) is a program that provides the warfighter with timely and quantitative information regarding aircrew and system performance for improving safety, operational efficiency, and readiness every flight. (12) Avionics Component Improvement Program (AVCIP) provides resources to address critical readiness and reliability deficiencies, obsolescence, loss of sustainability and top Fleet repair cost drivers in Naval avionics systems. The overall goal of the modifications budgeted in FY 2008 is to procure the common equipment required for the individual aircraft platforms. The specific modifications budgeted and programmed are:</p>

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Global Positioning System (GPS) (OSIP 71-88)

MODELS OF SYSTEMS AFFECTED: All aircraft TYPE MODIFICATION: Common Avionics (Safety) (Added Capability)

DESCRIPTION/JUSTIFICATION: The NAVSTAR GPS is designed to provide highly accurate passive position (16 meters), velocity (0.1 meter/sec) and time to users worldwide in all weather conditions. GPS will be integrated with communication, navigation, and weapon systems equipment (attitude heading reference systems, inertial navigation systems, mission computers, etc.). This OSIP procures the GPS B-kit equipment (receivers, antennas, amplifiers, CDNU, DDS, SDC, etc.) as required for the above platforms. Hardware configuration varies depending on the TMS of the aircraft. Approximately 2500 aircraft will be modified with equipment provided through this OSIP. The Global Positioning System Operational Requirement Document (ORD) 003-78 dated 22 Jan 90 was based on an Air Force General Operating Requirement (GOR) dated 28 Jan 1978. The Navy ORD for Enhanced GPS User Equipment for Navigation Warfare and GPS Modernization was approved on 7 June 2000.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: The NAVSTAR GPS program completed Phase II (Full Scale Engineering Development) and completed Milestone IIIA (Approval for Limited Production) in June 1986. Milestone IIIB (Approval for Full Production) was completed in January 1992. Research, Development, Test and Evaluation, Navy (RDT&E,N) is funded under program element #0604777N.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: AN/ARC-210 Electronic Protection (EP) Combination Radio (OSIP 04-94)

MODELS OF SYSTEMS AFFECTED: AH-1W, AV-8B, C-2, CH-46E, C/MH-53D/E, EA-6B, KC-130F/R/T, F/A-18C/D E/F, UH-1N, HH-60 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: The AN/ARC-210 is a combination UHF/VHF, AM/FM jam-resistant radio that was developed to allow for EP interoperability with the Air Force, Army and NATO. The radio provides dual UHF capability for CV based TACAIR; VHF AM for close air support and maritime channels; VHF AM for air traffic control; and EP capabilities using the Air Force developed waveforms (UHF-AM HAVEQUICK I and II), and the Army developed waveform (VHF-FM SINGGARS). The AN/ARC-210 can be controlled by either a remote control unit or via a MIL-STD-1553 multiplex data bus. The EP parameters and single channel preset information can be loaded via a CYZ-10 Data Transfer Device (DTD). The fill information can consist of word-of-the-day for HAVEQUICK; the KGV-10 transec variable, hopsets and frequency lock-out tables for SINGGARS. Engineering Change Proposal (ECP) 12 incorporated embedded Demand Assigned Multiple Access (DAMA) Satellite Communications (SATCOM), embedded COMSEC, embedded Variable Message Format (VMF), Link 4A, and is compatible with the memory loader verifier. ORD # 333-06-93 dated 4/20/93 validated this modification. FY08 and out funding is required for non-recurring engineering and test efforts to determine Communication Security (COMSEC) retrofit solution in response to National Security Agency (NSA) policies and mandates.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: The AN/ARC-210 Common OSIP provides B-kits and common logistics requirements to multiple aircraft. Individual platform OSIPs include non-recurring engineering, integration, A-kit manufacturing and unique aircraft logistic requirements. Full rate Production Decision was approved in May 1994. Incorporation of these hardware mods will be accomplished via an ECP to the production receiver/transmitters configuration. Corresponding platform OSIP numbers; C-2A OSIP 24-94; AH-1W OSIP 3-93; AV-8B OSIP 23-93; CH-46E OSIP 9-92; EA-6B OSIP 42-93; F/A-18C/D OSIP 39-92 and 10-99; K/C-130F/R/T OSIP 2-92; UH-1N OSIP 15-92; CH/MH-53D/E OSIP 11-92.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Crash Survivable Flight Incident Recorders (CSFIR) (OSIP 43-94)

MODELS OF SYSTEMS AFFECTED: AV-8B, F/A-18, VH-3D/60N, C/T-130, C-2, C-12, T-39, U/VP-3 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: Chief of Naval Operations letter, Ser N8/5U640779 of 2 May 1995, directed the CSFIR implementation policy on Naval Aircraft. This modification will provide procurement and integrated logistics support of Navy common CSFIR and will include addressing obsolescence of commercial components. The CSFIR will be a crash hardened recorder of selective aircraft systems and position parameters to be used in support of aircraft mishap and incident investigations. RDC01-88-97 validate this modification.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: Commercial off-the-shelf and non-developmental systems will be procured to the maximum extent feasible via open competition. Completed F/A-18 val/ver in 3rd quarter FY00. F/A-18 installations delayed due to war-time efforts; schedule extended out into FY07.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Ground Proximity Warning System (GPWS CAT I) Fixed Wing (OSIP 14-97)

MODELS OF SYSTEMS AFFECTED: KC-130T/F/R, VP-3, C-2A, S-3, UP-3, EA-6B, T-45 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: The Ground Proximity Warning System (GPWS) is a low-cost, highly reliable stand-alone commercial set built to provide reliable integration of on-board sensor data and provides an aural warning for excessive descent rate, terrain closure rate, inadvertent descent below glideslope and descent below minimum. Commercial GPWS implementation has shown a demonstrated dramatic reduction in controlled flight into terrain incidents. ECP-130-108 increases system safety by eliminating known deficiencies and applies to military application during normal and low level mission requirements. ORD # 555-88-00 signed 1 May 00 validates this modification.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: GPWS CAT-I OPEVAL (P-3C) was successfully completed October 1993. USAF retrofitting all C-130 T/M/S with same unit as part of Autopilot Upgrade Program. USAF OPEVAL in C-130.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Traffic Alert & Collision Avoidance System (TCAS) (OSIP 25-98)

MODELS OF SYSTEMS AFFECTED: C-2, C-130T, VP-3, KC-130, UP-3 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: CNO memorandum of 09 Nov 1999 directed TCAS implementation policy on Naval Aircraft. This modification will provide procurement and logistics support of a common TCAS. The TCAS will provide a display of situation awareness to aid in the prevention of midair mishaps. An ECP was approved in FY 99 to incorporate this change.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: TCAS Off-The-Shelf processor was selected. The ECP NRE effort for C-2, VP-3, and C-130T/KC-130 was accelerated and began in FY 98. Milestone III approved March FY01.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Communication - Navigation - Surveillance / Air Traffic Management (CNS/ATM) Systems (OSIP 21-01)

MODELS OF SYSTEMS AFFECTED: P-3C, EP-3E, C-2A, EA-6B, KC130J, VH-3D, VH-60N, F/A-18E/F, F/A-18C/D, E-2C, MH-60S, MH-60R, F/A-18A+, H-1, CH-53E, AV-8B, TAV-8B, UP/VP-3A, NP-3C/D, MV-22B, MH-53E TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: CNS/ATM provides new and enhanced Common Avionics equipment to comply with increasing ICAO (International Civil Aviation Organization) Standards and mandates. Areas impacted are worldwide, including transoceanic routes, as well as European and US National Air Space. Aircraft which are non-compliant with these standards and country mandates will be operationally delayed, circuitously rerouted, or denied access to controlled airspace. Some requirements are already in place (i.e. 8.33KHz VHF radio channels in Europe, Oct 99), while others are scheduled for implementation throughout the next several years (i.e.: Mode S, March 2009).

Prioritization of platform type and quantity is based on mission and anticipated operation in affected airspace. Enhanced functionality includes Mode S (Common Transponder and Aircraft Personality Module), 8.33KHz VHF channel spacing, RNP-4 integrity, Protected Instrument Landing System (P-ILS), Multi-Mode Receiver, and cockpit processing and display capability.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Began Mode S and RNP/RNAV integration into P-3 and C-2 in 2004. Achieve IOC by 07
 Began Mode S and RNP/RNAV integration into E-2 in 2005. Achieve IOC by 07
 Began integration of 8.33 KHz VHF Radio into P-3C by 05. Achieve IOC by 2007

Total Procurement		86.5		58.1		59.9		47.7		57.6												

- Notes:
- Totals may not add due to rounding
 - A-Kits, B-Kits, and Installation cost varies due to multiple & different functionalities/systems on each aircraft T/M/S
 - B-Kits quantities differ from A-Kits where B-Kits consists of a card or module that will be integrated without A-Kit requirement.
 - Installation Kit/Installation Equipment quantities reflect number of units procured, installation quantity reflects number of aircraft.

Exhibit P-3a	Individual Modification																																																																																																																																																																																																																																																																																																																																																																																																																																																												
MODIFICATION TITLE:	<u>Tactical Aircraft Moving Map Capability (TAMMAC) (OSIP 02-02)</u>																																																																																																																																																																																																																																																																																																																																																																																																																																																												
MODELS OF SYSTEMS AFFECTED:	<u>F/A-18C/D/E/F, AV-8B, AH-1W, UH-1Y</u> TYPE MODIFICATION: <u>Common Avionics Modification</u>																																																																																																																																																																																																																																																																																																																																																																																																																																																												
<p>DESCRIPTION/JUSTIFICATION: TAMMAC provides the aircrew an easily assimilated graphical presentation of the aircraft's position and the relative positions of targets, threats, terrain features, planned mission flight path, no fly zones, safe bases and other objects. TAMMAC will present the aircraft's current situation on a map using new or existing cockpit displays. In addition to providing a basic moving map capability, the TAMMAC system will serve as a memory resource for the overall aircraft mission system and will incorporate an improved data transfer and recording capability. This memory resource includes a data loader function of sufficient memory capacity and speed to load/update all required map theater and mission specific databases as well as the ability to record mission and maintenance data. TAMMAC will also provide a Terrain Awareness Warning System (TAWWS) capability. The principle benefits anticipated, increased mission effectiveness and survivability, arise from improved situation awareness, reduced crew workload and enhanced capability for precision navigation, targeting, terrain avoidance, and mission replanning. TAMMAC is comprised of two Weapon Replaceable Assemblies (WRA), the Advanced Memory Unit (AMU) and the Digital Map Computer (DMC). The Digital Video Map Computer (DVMC), a DMC variant, will be utilized for Lot 26 and above F/A-18E/F aircraft. The TAMMAC system will replace the existing Navy AN/ASQ-196 Digital Map Set in the older aircraft, which is facing major parts obsolescence problems and is not capable of growing to support future requirements. TAMMAC will also replace the AN/ASQ-194 Data Storage Set which has insufficient memory and loading speed to load map theater databases. DVMCs are procured to replace F/A-18E/F DMCs installed in Lot 26 and 27. The DMC will be reused in the C/D retrofit program.</p> <p>DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: Milestone III approved April 01.</p> <p>FINANCIAL PLAN: (TOA, \$ in Millions)</p> <table border="1" style="width: 100%; Exhibit P-3a	Individual Modification																																																																																																																																																																																																																																																																																																																																																																																																																																																				
MODIFICATION TITLE:	<u>Advanced Mission Computer & Displays (AMC&D)/ Multipurpose Color Display (MPCD) (OSIP 01-02)</u>																																																																																																																																																																																																																																																																																																																																																																																																																																																				
MODELS OF SYSTEMS AFFECTED:	<u>F/A-18C/D/E/F, AV-8B, T-45</u> TYPE MODIFICATION: <u>Common Avionics Modification</u>																																																																																																																																																																																																																																																																																																																																																																																																																																																				
<p>DESCRIPTION/JUSTIFICATION: Advanced Mission Computer and Displays (AMC&D) System is targeted to replace existing aging/obsolete and performance limited AN/AYK-14(V) Mission Computer (MC) and Contractor Furnished Equipment Displays. AMC&D system consists of an Advanced Mission Computer (AMC) which includes Mission Processing and Display Processing, Display Heads (DH), High-Speed Data Bus interfaces with Fiber Channel Network Switches (FCNS) and an 8x10 display. AMC&D system will have modular components integrated on an Open Systems Architecture so that it can be tailored and configured for each application, and can address new performance requirements and technologies with minimum cost. AMC&D will provide improved mission computers and displays to handle increased requirement for flight, mission, and imagery data. Due to obsolescence problems with the current Multipurpose Color Display (MPCD) display, the AMC&D program is leveraging the 5x5 DH to provide a form, fit, function and interface replacement (no install funding required). Analysis of parts obsolescence will be required to maintain current AMC&D configuration and to determine life of type procurements as required. MPCD production buys begin in FY02 (no installation required) and AMC&D LRIP production buys began in FY01 with FRP buys planned in FY04. The F/A-18E/F Retrofit Program (begins in FY06) goal is to achieve a 2-block configuration. Block 1 aircraft include Lots 23-25 and Block 2 includes Lots 26 and above. Block 1 will consist of replacing the AN/AYK-14 computers in Lots 23-24 and replacing the AMC with a newer configuration AMC in Lot 25. The computers are obtained as part of a reuse program from Block 2 portion of the upgrade and all Lots will require an A-kit. Lots 26 and 27 of Block 2 are provisioned to accept all WRAs for Block 2. The 06 procurement for Lots 26 consists of FCNS, displays and digital video mapping card. The 06 procurement for Lot 27 consists of displays, DVMC, and upgrade to a card in the AMC. To maintain the common block configuration, new AMCs are procured for both Lots in the out years. The AMCs removed from Lots 26 and 27 will be part of the reuse to the Block 1 configuration. The AMCs procured for Lot 28 and 29 do not require installation costs since they are a form fit function replacement for as-delivered AMCs. The systems removed from Lots 28 and 29 will be part of the reuse process. AMC&D MNS - M061-88-94 of 2 December 1994. AMC&D ORD Ser. No. 549-88-00 Approved 21 March 2000. The FY08, 09 and 10 procurements include B-kits to provide digital output for the 8x10 AMPD (HRR1) to address a COMOPTEVFOR finding of poor ready room playback quality of the current analog video.</p> <p>DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: AMC and 5x5 display CDR - 2nd Qtr FY01. FCNS CDR - 4th Qtr FY01, 8x10 CDR - 2nd Qtr FY02. F/A-18E/F: OPEVAL - 2nd Qtr FY03, Milestone III - 4th Qtr FY04, OA - 3rd Qtr FY02, FOT&E 3rd Qtr FY04. AV-8B DT-IIB-2 - 4th Qtr FY01, OPEVAL - 4th Qtr FY02, Milestone III - 2nd Qtr FY03. Due to variation in lead times, B-kits are procured in year 1, A-kits in year 2 and installs in year 3. B-kit lead time 19 months, A-kit lead time 8 months.</p>

1. Totals may not add due to rounding. 2. MPCD is a drop-in-replacement. No A-kit required. 3. B-Kit (WRA) procured in outyears are necessary to meet common block configuration. 4. See Install footnote for further clarification.																																																																																																																																																																																																																																																																																																																																																																																																																																																					

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Attitude Gyro Upgrade (OSIP 07-04)

MODELS OF SYSTEMS AFFECTED: CH-53E/D, MH-53E, CH-60S, EP-3E, HH-60H/J, P-3C, H-46, SH-60B/F/H, and MH-60R TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: There are eleven (11) current attitude gyro systems in the CH-53E/D, MH-53E, CH-60S, EP-3E, HH-60H/J, P-3C, H-46, SH-60B/F/H, and MH-60R aircraft that are significant fleet operational and support cost drivers in the flight hour program. Two state-of-the-art Commercial-off-the-Shelf (COTS) products are available to improve readiness and reduce fleet operational and support costs in the flight hour program. The solution to the problem is to replace these obsolete gyros with a more reliable and maintainable gyro at the very lowest cost. In order to minimize time and cost for fleet introduction, replacement units shall be COTS in nature and be a form, fit, functional replacement.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: Initial procurement awards were Displacement Gyro's - May 2004 and Rate Gyro's - January 2005. COTS/NDI replacement system.

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Aircrew Wireless Internal Communications System (AWICS) (OSIP 09-04)

MODELS OF SYSTEMS AFFECTED: MH-53E, CH-46E, CH-53D/E, MH-60S/R, KC-130R/T, C-130T, KC-130J, MV-22B, C-2A, P-3 (all TMS), and UH-1 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION:
 A wireless intercom system that will allow for unimpeded movement throughout the aircraft. This safety improvement will prevent aircrew/passenger entanglement with ICS (intercom system) cords in the event of a mishap. Unencrypted system will begin procurements in FY06, with encrypted system beginning procurements in FY08.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:
 Installation Decision (Unencrypted) 3rd Quarter 2006
 Secure Transmission (encrypted) ECP 1st Quarter 2008

MODIFICATION TITLE: Military Flight Operations Quality Assurance (MFOQA) (OSIP 02-08)

MODELS OF SYSTEMS AFFECTED: F/A-18C/D/E/F, MH-60R/S, T-45C, CH-53E, MV22 TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: MFOQA improves safety, readiness and asset conservation by assessment of aircrew and aircraft performance; improving training, operations, maintenance, and safety across all Naval Aviation platforms. Efforts will include procuring hardware, as required, to capture aircraft parametric data and data downloading capability to allow the processing & analysis required by MFOQA. Efforts will also include hardware & software upgrades to the various Squadrons' ground/work stations to enable MFOQA implementation. MFOQA Program directed by OSD mandate October 2005 and SECNAV February 06.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:
 Analysis of Alternatives (AoA) approved Sep 05; Capability Development Document (CDD) approved Jan 06

Exhibit P-3a Individual Modification

MODIFICATION TITLE: Avionics Component Improvement Program (AVCIP) (OSIP 012-08)

MODELS OF SYSTEMS AFFECTED: All Aircraft TYPE MODIFICATION: Common Avionics Modification

DESCRIPTION/JUSTIFICATION: AVCIP provides resources to address critical readiness and reliability deficiencies, obsolescence, loss of sustainability and top Fleet repair cost drivers in Naval avionics systems. In the year prior to execution, candidate projects from all TMS are collected, reviewed, competed and selected based upon proposal solution maturity and executability, mission criticality and urgency, degree of readiness impact or Fleet maintenance or repair cost burden, return on investment, and Fleet advocacy. AVCIP is considered a better business practice to address cost-wise readiness in support of NAE efficiency objectives. AVCIP is funded by both RDT&E,N and APN accounts to cover non-recurring engineering for design/development or re-design/modification, integration testing, prototype/lab asset development, qualification testing and engineering and logistics documentation and support services. APN funds will cover NRE to insert modern technology to address poor performance or obsolescence, and support initial procurements. Follow-on procurement tails are coordinated with Program Offices and their OSIPs.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES: AVCIP project selection criteria include proposed solution maturity and executability. Target project length to start of fielding of the solution is 12-18 months. Each procurement below is representative of initial project lab asset purchases for qualification and productionization validation. Units may be transferred to Fleet platforms as operational assets. Future year specific development profiles/milestones will be dependent upon projects competed and selected. Multiple projects may be selected each year.

DESCRIPTION:

This line funds Gun Systems for Marine Corps assault support aircraft. OSIP 003-06 funds the Common Defensive Weapon System (CDWS). The CDWS is a .50 Caliber Medium Pintle Head (MPH) mounted weapon system which is being procured to replace the GAU-16 and the XM-218 .50 caliber machine guns. The CDWS provides a significant increase in firepower, accuracy, lethality, and reliability, and will maximize survivability through suppressive fire capabilities for Marine Corps assault support aircraft. Procurement of the system began in FY03. The CDWS consists of a GAU-21 .50 Caliber Machine Gun, a MPH mount with recoil dampening buffers, and an aircraft integration/mounting kit. This system will increase aircraft/aircrew survivability during assault support missions by increasing the effective range and rate of fire as compared to current systems. FY07 Funding: Continue outfitting the CH-46 and begin outfitting of UH-1. FY08/09 Funding: Complete outfitting of the CH-46 and UH-1. OSIP 017-07 funds the M240D Medium Caliber machine gun for outfitting on the CH46E to provide suppressive and defensive fire in the rear sector of the aircraft. All units will be procured in FY07 using FY07 Title IX supplemental funds.

OSIP No. / DESCRIPTION	PRIOR YEARS	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	TO COMPLETE	TOTAL

Exhibit P-3a

MODIFICATION TITLE: COMMON DEFENSE WEAPON SYSTEM(OSIP 003-06)

MODELS OF SYSTEMS AFFECTED: CH-53D/E, CH-46, UH-1, V-22 TYPE MODIFICATION: MISSION/MISSION ENHANCEMENT

DESCRIPTION/JUSTIFICATION:

The Common Defensive Weapon System (CDWS) is a .50 Caliber Medium Pintle Head (MPH) mounted weapon system which will provide enhanced defensive and suppressive fire for Marine Corps assault support aircraft. The CDWS consists of a GAU-21 .50 Caliber machine gun, a MPH mount with recoil dampening buffers, and an aircraft integration/mounting kit. This system will increase aircraft/aircrew survivability during assault support missions by increasing the effective range and rate of fire as compared to current systems.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

The GAU-21 .50 Caliber Machine Gun is a Commercial Off-the-Shelf (COTS) item ready for deployment on Marine Corps assault support aircraft (CH-46, CH-53, UH-1, and V-22). The MPH and aircraft integration kit's base designs are also COTS though kit modifications for each T/M/S aircraft must still be finalized. CDWS is also being integrated on USN platform MH-60R/S and USMC V-22 through their own budget lines, thus enhancing the common configurations between USN and USMC. All non-recurring engineering efforts were completed during FY03 under BLI 052800, H-53 Series, OSIP 18-03. Total does not include FY04 Operation Iraqi Freedom (OIF) supplemental received under H-53 Series, OSIP 18-03 which procured the Ramp Mounted Weapons System. Milestone C review for GAU-21 .50 Caliber Machine Gun is scheduled for August 2006.

- Notes:
1. Asterisk indicates amount less than \$51k
 2. Congressional Adds in FY03 and FY04 on H-53 line procured 80 and 110 GAU-21s respectively.
 3. Increase in FY08 and FY09 ILS includes depot start-up costs.
 4. GAU-21 .50 Caliber Machine Guns will be transitioned from the CH-46 to the V-22 as the CH-46 is retired from the inventory.

Exhibit P-3a

MODIFICATION TITLE: CREW-SERVED WEAPONS (OSIP 017-07)

MODELS OF SYSTEMS AFFECTED: CH-46E TYPE MODIFICATION: MISSION/MISSION ENHANCEMENT

DESCRIPTION/JUSTIFICATION:

The M240D is a single barrel 7.62mm Machine Gun is a gas operated, belt fed, air cooled machine gun with a maximum rate of fire of 950 shots per minute (SPM). The M240D will serve as a rear-defensive weapon system for the CH-46E aircraft. CH-46E squadrons deployed to GWOT operations are vulnerable from the rear hemisphere due to the limited fields of fire provided by the door guns. The M240D Machine gun on the ramp of the CH-46E can be employed to suppress small arms fire while inbound and provide defensive fire in the aircraft's 6-o'clock sector. This reduces vulnerability from small arms ground fires during take-off, landing, en-route, egress and can be crucial during hover operations, such as rescue hoisting and Special Patrol Insertion and Extraction (SPIE) operations. The M240D allows for a common medium machine gun throughout the Marine Corps. FN Manufacturing is the sole source manufacturer of the M240D Machine Gun.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

The M240-D Machine Gun is a Commercial Off-the-Shelf (COTS) item ready for deployment on the CH-46E Marine Corps assault support aircraft . The M240D is currently supported by the Navy/Marine Corps supply system and can be procured and delivered to theatre within six months of receiving funding.

Exhibit P-3a

MODIFICATION TITLE: MARK XIIA MODE 5 IFF(OSIP 015-03)

MODELS OF SYSTEMS AFFECTED: VARIOUS (49 SEPARATE T/M/S) TYPE MODIFICATION: CAPABILITY IMPROVEMENT

DESCRIPTION /JUSTIFICATION:

MK XIIA Mode 5 provides improved secure cooperative combat identification via Identification Friend or Foe (IFF). MODE 5 is a product improvement which is designed to be installed through engineering changes to digital MK XII interrogators and transponders including the APX-118/123, UPX-37/41C, APX-111, RT-1832/1918, APX-119, and XS-950SI. Mode 5 is designed to be installed in all Navy T/M/S aircraft which are currently Mode 4 IFF capable. Mode 5 is developed in cooperation with NATO and is governed by STANAG 4193. Mode 5 was designated a "JROC special interest" program in March 2001 and is interoperable across all services. (ORD # 577-06-01). Mode 5 upgrades existing Mode 4 IFF equipment, including cryptography, support equipment, and associated hardware and software changes.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

MODE 5 completed a brassboard development in December 1997. Modeling and simulation to demonstrate interoperability was completed in February of 1998 to support NATO STANAG development. Proof of concept flight testing completed in December 1999. A Preliminary Design Review (PDR) for the proposed Engineering Change Proposal (ECP) to incorporate MODE 5 in the APX-118 was completed in July 2001. Contracts for prototype Cryptographic Module and ECP kit are presently executed. Milestone B was completed in May 2003. Operational Assessment (OA) completed 2nd quarter FY 2006 with Operational Evaluation (OE) scheduled for 1st quarter FY 2008. Due to the need for additional developmental efforts resulting from requirements definitization, numerous test events have been rescheduled and Milestone C delayed from September 2005 to July 2006. Milestone C and Low Rate Initial procurement (LRIP) was approved in July 2006 including a revised Acquisition Program Baseline Agreement.

DESCRIPTION: The V-22 is a tilt-rotor, vertical takeoff and landing aircraft currently being developed for joint service application. The program is being designed to provide an aircraft to meet the amphibious/vertical assault needs of the Marine Corps, the strike rescue needs of the Navy, and supplement USSOCOM special mission aircraft. The aircraft will be capable of flying 2,100 miles with one refueling, giving the Services the advantage of a Vertical/Short Takeoff and Landing (V/STOL) aircraft the could rapidly self-deploy to any location in the world.

The FY 2008 budget request reflects the funding level necessary to correct currently known deficiencies and allow the program to move forward. The FY 2008 modifications program procures retrofit kits necessary to correct discrepancies identified during initial flight testing as well as those resulting from any redesign efforts.

The current procurement objective is 458: 360 MV-22 Marine Corps aircraft, 48 HV-22 Navy aircraft, and 50 CV-22 aircraft for USSOCOM.

Type Modifications: Safety, Reliability, Increased Service Life, Improved Mission Capabilities

MODIFICATION TITLE: MV-22 CORRECTION OF DEFICIENCIES AND PRE BLOCK A THROUGH C (OSIP 022-01)

MODELS OF SYSTEMS AFFECTED: V-22 Series TYPE MODIFICATION: Safety, Reliability, Increased Service Life, Improved Mission Capabilities

DESCRIPTION / JUSTIFICATION:

Future ECPs:
 PRE BLOCK A, BLOCK A, BLOCK B, and BLOCK C: Major configuration changes are associated with the aircraft Propulsion/Drive, Electrical, Avionics, Hydraulics, Structure/Airframe, Fuel, Software, and Environmental Control System (ECS).
 Specifically included are Nacelle changes, Avionics, Blade Fold Harness, Fuel Probe, Active Vibration Suppression System, Constant Frequency Generator and Variable Frequency Generator. Additional configuration changes include Effectiveness and Suitability and Enhanced Capability. ECPs for (R&M changes, Ice Protection and Clam Shell Doors) are configuration items associated with production Block A, Block B, and Block C changes. Aircraft Retrofits are implemented to coincide with resources and aircraft availability, stand-alone retrofit ECPs are generated. These Retrofit ECPs are the implementation of the approved production Block Configuration changes.

ECP-344:
 REGULATED CONVERTER: Incorporates fixes to alleviate concerns associated with spec compliance and eliminate nuisance failures for fleet aircraft.
 SHAFT DRIVEN COMPRESSOR SCREEN: Incorporates a new shaft drive compressor screen with one piece inner and outer frames to reduce the number of parts and larger holes to increase air flow.
 RAMP ACTUATOR: Incorporates fixes for reliability and life limit deficiencies. There are two ramp actuators per aircraft.
 CARGO RESTRAINT SYSTEM: Changes the cargo restraint factors from a dynamic to a static tie down system to improve Fleet suitability.
 FUEL ISOLATION TUBES: Incorporates the productionized final design for resistive tubes on hoses for lightning strike protection.
 AVIONICS: Avionics modifications to the V-22 will improve display reliability, eliminate communication security issues and alleviate parts obsolescence/vendor problems. Changes to the V-22 avionics will include: Display System upgrade, Cockpit Inter Communication System modification, upgraded Mission Computer, updated Data Transfer Module, Control Display Unit/Engine Instrument Caution Advisory System upgrade, Control Display Unit Keyboard upgrad, and Avionics Interface Units upgrades.
 POWER TRANSMISSION AND CONTROL: Changes to the V-22 Power Transmission and Control System will improve reliability and maintainability. Changes to the V-22 Power Transmission and Control System will include: swashplate reliability upgrades, engine gimbal ring/spherical bearing installation revision, updated refuel/defuel valve, bull gear shroud and engine gimbal ring.
 COCKPIT: Changes to the V-22 cockpit will improve crew safety, mission suitability and overall reliability. Changes to the V-22 cockpit include: night vision goggle compatible hardware, upgraded inertial reels, upgraded pilot and co-pilot restraint system, throttle control lever soft stop modification, and improved rain removal.
 STRUCTURAL: Structural changes to the V-22 will increase survivability, improve maintainability and aircraft availability, eliminate component interferences, improve suitability and correct safety related issues. Structural changes include: forward sponson fuel bladder access redesign/install powder panels, environmental control unit Ram air barrier filter, avionics left hand mounting tray, aft upper door strut, add manual drive decal, fold blades in high winds and modified trunnion fitting.
 PRODUCTION ROTOR LIGHTING PROTECTION: Improves rotor system lighting protection by adding improved bonding harness and grounding strap bracket.
 BRACKET HYDRAULIC LINE CLAMPING: Relocate clamping provisions from the removable conversion actuator fairing to the frame and improve the tube installation.
 SWASHPLATE DRAG TUBE: Redesign Swashplate Drag Tube to increase part life.
 WASHER: Washer to now be included with attach hardware to ensure adequate tying of the assembly.
 RELIABILITY & MAINTAINABILITY FIXES: Includes Corrective Action Plans to make the aircraft compliant with Operation Requirements Document requirements.

ECP-400:
 AIRCRAFT MAINTENANCE TRAINER: Improves training and pilot proficiency by incorporating modifications to the AMT #1 to reflect most current aircraft configuration as directed by Blue Ribbon Panel.

ECP-397:
 FULL FIDELITY SIMULATOR (FFS) UPGRADES: Improves training and pilot proficiency by incorporating modifications to the FFS #1 & #2 to reflect most current aircraft configuration as directed by Blue Ribbon Panel.
 FLIGHT TRAINING DEVICE (FTD) UPGRADES: Improves training and pilot proficiency by incorporating modifications to the FTD #1 to reflect most current aircraft configuration as directed by Blue Ribbon Panel.

ECP-427R1:
 MECHANICAL PART TASK TRAINER: Improves maintainer and aircrew proficiency by incorporating Block 'A' configuration changes.

ECP-451:
 INTERACTIVE MULTIMEDIA INSTRUCTION: Improves maintainer and aircrew proficiency by incorporating Block 'A' configuration changes.

ECP-511:
 AIRFRAME PART TASK TRAINER, Incorporate Block 'B' configuration changes.

ECP-###: Block B safety configuration changes required to meet mission requirements. Changes are associated with the aircraft Propulsion/Drive, Electrical, Avionics, Hydraulics, and Structure/Airframe.

ECP-###: Block B safety, reliability and maintainability changes required to meet mission requirements. Changes are associated with the aircraft Propulsion/Drive, Electrical, Avionics, Hydraulics, and Structure/Airframe.

ECP-722: Shaft Driven Compressor Inlet Barrier Filter,

ECP-592: Wing Stow System, Incorporate hydraulic system isolation valve normally closed to inhibit Wing Stow System Forward 2 Lock Pin actuator from extending when performing wing maintenance.

ECP-###: Refuel/Defuel Valve, redesign of the refuel/defuel valve.

ECP-###: Gussets to Fairings, Install gussets to upper and lower flanges of fairings assembly.

ECP-###: Ramp Tunnel Redesign, redesign of the ramp tunnel.

ECP-656: Rotor Harness Redesign, Change the moldings area, extending them to the clamp locations on each side of the strap and squaring off the molded area.

ECP-669: MLG Door Hinge Redesign, new-thicker machined hinge replacement designed to meet current loading requirements.

ECP-505: ECU Water Spray Redesign, redesigned the water spray inlet assembly (U-tube) and the heat exchanger crossover tube assembly so the system tolerance can be increased to sand and dust ingestion.

ECP-559: AMT #2, Improves training and pilot proficiency by incorporating modifications to the AMT #2 to reflect most current Block A and Block B aircraft configuration.

ECP-513R1: Forward Engine Air Bleed, Redesigned Air tube will improve reliability and increase aircraft safety.

ECP-539: Plugs & Covers, Redesigned plugs and covers to meet durability and operational suitability.

ECP-###: Lightweight Paint, improves aircraft suitability and reduces IR Vulnerability.

ECP-652R1: Cargo Hook Door Actuator, new design improves cargo hook door reliability and operational suitability.

ECP-567: Surge Hook Door Regulator, New design improves surge hook door reliability and operational security.

ECP-573: NLG Shock Struts, Nose Landing Gear shock struts are a life limited part, redesigned struts will eliminate safety of flight issue.

ECP-493: Wheel & Brake, Redesign to improve reliability on the wheel, brake and components.

ECP-470: Lateral Mass Balance, design change that will increase lateral mass balance by 9 lbs and add new pads, tungsten plates and bellcrank.

ECP-471: Life Raft, designed for 20-man raft with overflow capacity to 30-man.

ECP-478: SDC Duct Leak Switch Set Point, Reliability change to SDC duct leak switches to reduce false alarm pilot nuisance alarms.

ECP-479: Suction Lift Pump Bypass Valve, Redesign valve to prevent the diaphragm inverting due to pressure spike.

ECP-568R1: Swashplate Actuator Hose, Redesign Hose end fittings of the swashplate Actuator ports by adding tabs so hoses can be oriented one way.

ECP-510: Climb Dive Valve, provides for redesign of the valve to decrease cracking pressure to 1.0-1.5ps.

ECP-684: Ice Protection System and Fairings, provides automatic anti-ice protection in aircraft icing conditions.

ECP-721: Ramp Mounted Weapon System (RMWS), Provide an all quadrant Defensive Weapon System for the V-22.

ECP-716: Infra-Red Suppressor (IRS) Redesign, Provide a more reliable configuration to items that have contributed to poor system reliability and identify a repair kit for the aircraft Infra-Red Suppressor system.

ECP-####: Cabin Upper Crew Door, Provides redesign to the cabin upper crew door and the proper use of the new door.

ECP-627: Engine Air Particle Separator (EAPS), Provides a more efficient and reliable system by incorporating an upgraded EAPS Blower case drain hose, an upgraded EAPS Blower outlet hose, and the elimination of restrictors in the case drain circuit.

ECP-621: Full Authority Digital Electronic Control (FADEC), Provides modification of the FADEC mount brackets to allow proper seating of FADEC into mounting bracket.

ECP-###: Improved Troop Seats, Provides for the redesign of the seat and the supporting airframe seat mount points.

ECP-557: Additional Force & Drive Rate for TCL, Provides an increased maximum drive rate to meet current design specification requirements.

ECP-544: Slip Ring Commonality, Provides a revised routing of the power feeder lines in the right and left hand Engine Nacelles.

ECP-515: Improved Nacelle Blower, Provides a change to correct current nacelle blower bearing failures.

ECP-720: Improved Electrical Contactors & Material Torque Valve, Changes material of nuts for electrical contactors and revises the torque values for fastening wiring to contactors.

ECP-613: Purge Check Valve Cracking Pressure Change, Provides a modified purge valve to increase the cracking pressure range.

ECP-###: Air Cycle Machine Filtration, Modifies the bearing cooling flow path and adds a barrier filter.

ECP-###: Fuel System Changes, Provides redesigned Rupture Disks and Sponson Boost Pumps to decrease fatigue failure and eliminate potential fuel run back.

ECP-649: O2N2 Concentrator, Modifies the O2N2 Concentrator to eliminate false failures at low end of tolerance band for input air pressure.

ECP-647: Landing Gear Isolation Valve, Provides a new Landing Gear Isolation Valve to eliminate single failures in the normal control system which can cause retraction or extension in flight at unsafe airspeed.

ECP-693: Fuel Surge Valve: Provides a regulator in the V-22 refueling system to limit the surge pressures associated with aerial refueling.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONES:

The MV-22 aircraft are currently in Low Rate Production. First acceptance and incorporation has been in production aircraft. All Awarded Kit deliveries and Installations are on schedule.
