BUDGET ACTIVITY 7

## Department of Defense Appropriations Act, 2007

---

### **Research, Development, Test and Evaluation, Navy**

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, \$18,673,894,000, to remain available for obligation until September 30, 2008: *Provided*, That funds appropriated in this paragraph which are available for the V-22 may be used to meet unique operational requirements of the Special Operations Forces: *Provided further*, That funds appropriated in this paragraph shall be available for the Cobra Judy program.

**"In accordance with the President's Management Agenda, Budget and Performance Integration initiative, this program has been assessed using the Program Assessment Rating Tool (PART). Remarks regarding program performance and plans for performance improvement can be located at the Expectmore.gov website."**

EXHIBIT R-2, RDT&E Budget Item Justification							DATE: February 2007		
APPROPRIATION/BUDGET ACTIVITY						R-1 ITEM NOMENCLATURE			
RESEARCH DEVELOPMENT TEST & EVALUATION, NAVY / BA-7						0604227N, HARPOON MODIFICATIONS			
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	
Total PE Cost		27.894	43.470	72.868	30.314	6.002	0	0	
1843 HARPOON Block III		27.894	43.470	72.868	30.314	6.002	0	0	

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Harpoon Block III Weapons System is intended to upgrade and expand the capabilities of the Navy's only anti-ship, all weather missile to improve its precision in a congested, littoral environment. Modification of the RGM-84D and AGM-84D Harpoon 1C baseline missile will provide for Global Positioning System (GPS) accuracy, target selectivity in a littoral environment, and in-flight target position update solutions as well as positive terminal control. It will possess total organic capability (i.e. Autonomous Surface Action Group capability). Specific improvements provide for significant target discrimination as well as minimized target-to-shore separation capability, Battle Hit Indications (BHI), connectivity with future network architecture, and Land Blanking capability. Harpoon Block III will provide for a concept of operations which will support existing ISR Platform target detection and target/weapon position update (i.e. UAV, Helo, Fixed wing).

This development effort will lead to a procurement of 400 Surface Block III upgrade kits and 400 Air Harpoon Block III upgrade kits, beginning in FY 2010 for Surface and in FY 2011 for Air, that will retrofit existing Harpoon 1C, USN missile inventory.

FY07-11 RDT&E funding will support full development and integration of Selected Availability Anti-Spoof Security Module (SAASM), data link integration, and test and evaluation for both Surface- and Air-Launched weapons.

B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009
Previous President's Budget:	0.000	36.284	53.325	24.044
Current President's Budget:	<u>0.000</u>	<u>27.894</u>	<u>43.470</u>	<u>72.868</u>
Total Adjustments	0.000	-8.390	-9.855	48.824
Summary of Adjustments				
Congressional Reductions		-8.284		
Congressional Rescissions				
Congressional Undistributed Reductions		-0.106		
Congressional Increases				
Economic Assumptions			0.029	0.171
Miscellaneous Adjustments			<u>-9.884</u>	<u>48.653</u>
Subtotal	0.000	-8.390	-9.855	48.824

Schedule: Changes reflect: FY07 Congressional program reduction; PB 08 budget includes the Air variant; ACAT change from III to II because RDT&E threshold exceeded. Milestone schedule for Surface and Air have been combined as a result. Missile changes will be identical for both Surface and Air-Launched. Milestone B will be for a combined Surface and Air-Launched program, Milestone C will be for an LRIP decision, LRIP will establish an initial production base for the system and allow for the transition from FY10 LRIP quantity of 40 units to an FY11 quantity of 225 units. Milestone B decision change due to ACAT change.

Technical: Added an Air-Launched Harpoon Block III requirement with integration on F/A-18E/F.

FY07-11 RDT&E funding will support full development and integration of Selected Availability Anti-Spoof Security Module (SAASM), data link integration, and test and evaluation for both Surface- and Air-Launched weapons.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Surface Harpoon Block III Design/Development	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		22.689	30.900	31.741
RDT&E Articles Qty		4		

Surface Harpoon - Funding is for Block III kit design and development, prototype development and fabrication, Guidance Control Unit Design and integration, data link and GPS integration and Missile Operational Flight Program (OFF) design and development.

Air Harpoon Block III Design/Development	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost			2.852	32.557
RDT&E Articles Qty				3

Air Harpoon - Funding is for Block III kit design and development, prototype development and fabrication, Guidance Control Unit Design and integration, data link and GPS integration, aircraft software development and integration, and Missile Operational Flight Program (OFF) design and development.

Launch Control System Interface Design	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		5.205	9.718	8.570
RDT&E Articles Qty				

Harpoon Shipboard Command Launch Control Set (HSLCS) interface design. Harpoon Embedded Trainer (HET), Harpoon Operational Tactical Training System (HOTTS), and Harpoon Guided Missile Simulator (HGMS) upgrade development.

C. OTHER PROGRAM FUNDING SUMMARY:	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost
USN OP,N BLI 522700 Harpoon Support Equipment	0.000	0.100	0.000	0.000	8.058	5.155	4.667	7.373	14.307	39.660
USN WP,N BLI 232600 Harpoon Mods	0.000	0.000	0.000	0.000	9.646	42.514	43.883	42.103	20.088	158.234

D. ACQUISITION STRATEGY:

HARPOON Block III will provide a capability upgrade consisting of a "kit" which will be installed on existing Harpoon Block 1C, RGM-84D and Harpoon AGM-84D missiles (Formally an ACAT 1C program). Program insertion will be at the System Development and Demonstration level, followed by a production and installment effort funded in Weapons Procurement, Navy. Required shipboard upgrades and support equipment will be procured using Other Procurement, Navy.

The Acquisition Program will be executed using a Government and industry IPT concept. The primary Harpoon Block III upgrade, to include all system integration efforts, is intended to be accomplished through a Sole Source, Cost-Plus, Incentive Fee contract with McDonnell Douglas (Subsidiary of Boeing), the Original Equipment Manufacturer for Harpoon.

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The 2005 Quadrennial Defense Review (QDR), published February 2006, the FY07 President's Budget and USD (AT&L), supported direction to restructure the J-UCAS program and fund a new Navy UCAS program in its place. The Navy was directed to demonstrate carrier operations of a Low Observable (LO) Unmanned Combat Air System. This direction forms the foundation of the Navy's UCAS demonstration (Navy UCAS-D) program.

The purpose of the Navy UCAS-D program is to conduct carrier demonstrations of unmanned combat air system with Low Observable (LO) planform(s). The UCAS-D will be structured to match program resources to United States Navy (USN) objectives/constraints with the goals of identifying and maturing critical technologies and reducing the risk of carrier integration of a UCAS. The research and development data developed will support a follow-on acquisition milestone decision. System Development & Demonstration (SDD) funding is not covered, nor described in this exhibit.

The Navy UCAS-D is comprised of a LO planform Air Vehicle Segment and a Mission Control Segment (MCS). The Navy UCAS will be designed for autonomous launch and recovery as well as operations in the Carrier Control Area (CCA). The scope of the Navy UCAS-D effort includes design, development, integration, and validation of an unmanned, LO planform Air Vehicle Segment and MCS in the landbased and shipboard environments. Additional evaluations will be conducted to investigate MCS interfaces with shipboard systems such as primary flight control (PRI-FLY) displays, Landing Safety Officer (LSO) displays, and Carrier Air Traffic Control Center (CATCC) stations.

B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009
Previous President's Budget:	0.000	239.163	310.212	369.617
Current President's Budget:	<u>0.000</u>	<u>99.622</u>	<u>161.665</u>	<u>273.617</u>
Total Adjustments	0.000	-139.541	-148.547	-96.000
Summary of Adjustments				
Congressional Reductions		-139.163		
Congressional Rescissions				
Congressional Undistributed Reductions		-0.378		
Congressional Increases				
Economic Assumptions			1.023	2.267
Miscellaneous Adjustments			<u>-149.570</u>	<u>-98.267</u>
Subtotal	0.000	-139.541	-148.547	-96.000

Schedule: Re-phasing in the budget profile in fiscal years 2007 through 2011 has shifted the entire UCAS program to a FY2013 completion vice FY2011. The revised schedule reflects a refinement in planned activities and program requirements to achieve the capability to conduct carrier demonstrations of unmanned combat air systems with Low Observable (LO) platform(s).

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Navy UCAS-D program is an Advanced Development effort, designed to conduct shipboard demonstration and risk reduction. The Navy UCAS-D system includes an unmanned LO planform Air Vehicle Segment and Mission Control Segment (MCS). The Navy UCAS-D system will be designed for autonomous launch and recovery as well as operations in the Carrier Control Area. The scope of the Navy UCAS-D effort includes design, development, integration and validation of an unmanned, LO planform Air Vehicle Segment and MCS in the landbased and shipboard environments. Additional evaluations will be conducted to investigate MCS interfaces with shipboard systems such as primary flight control (PRI-FLY) displays, Landing Safety Officer (LSO) displays and Carrier Air Traffic Control Center (CATCC) stations. As a research and development demonstration effort, SDD funding is not covered or described in this exhibit.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Product Development	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		92.325	149.082	261.707
RDT&E Articles Qty				

The primary effort in the Navy UCAS-D program is design, development, integration and validation of hardware/software leading to a Carrier Demonstration of an unmanned, LO planform UCAS system no later than FY13. Effort includes: design, development, integration, and validation of the Navy UCAS-D system, integration of Government Furnished Equipment (GFE), and development of internal/external interface documents. In addition, design and development of hardware/software to support Automated Air Refueling (AAR) will be conducted. Shipboard evaluation of the Navy UCAS-D system includes integration of the UCAS-D system with shipboard systems such as primary flight control (PRI-FLY) displays, Landing Safety Officer (LSO) displays and Carrier Air Traffic Control Center (CATCC) stations. Shipboard research and development efforts include establishment and evaluation of launch/recovery envelopes.

D. ACQUISITION STRATEGY: In December 2005, the Department directed funding of the Navy Unmanned Combat Air System (Navy UCAS) Program. The primary goal is risk reduction for carrier integration and maturation of critical technologies, while developing the critical data necessary to support a potential follow on acquisition milestone decision. The Navy UCAS program will transition JUCAS technologies and designs developed under DARPA/USAF Other Transaction Agreements, toward the demonstration of a carrier based unmanned combat air system. The UCAS-D effort will focus on designing, developing, and evaluating the core capabilities which safely demonstrate carrier interoperability. Primary hardware development for the UCAS-D effort will be performed under a FAR-based, cost plus incentive fee-type contract competitively awarded to a single contractor. Source Selection is ongoing.

<b>A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION</b>								
<p>The Technology Applications Program supports the TRIDENT II (D5) Submarine Launched Ballistic Missile (SLBM) that provides the U.S. a weapon system with greater accuracy and payload capability as compared to the TRIDENT I (C4) system. TRIDENT II enhances U.S. strategic deterrence providing a survivable sea-based system capable of engaging the full spectrum of potential targets with fewer submarines. This Program Element supports investigations into new technologies which would help mitigate the program impact due to component obsolescence and a rapidly decreasing manufacturing support base. These efforts include Reentry System Applications and Guidance System Applications, Radiation Hardened Electronics Applications, and Strategic Propulsion Applications.</p> <p>The Enhanced Special Weapons effort supports the Nuclear Weapons Security program and SSBN Escort mission. The policies and requirements regarding the safeguard of nuclear weapons within the Department of Defense is established by DoD S5210.41M. Within the Department of the Navy, nuclear weapons are limited to TRIDENT Fleet Ballistic Missiles (FBM), either deployed aboard TRIDENT submarines or located landside at Naval Submarine Base, Kings Bay, or Naval Submarine Base, Bangor where missiles are first assembled as well as repaired. The Chief of Naval Operations (CNO) has assigned the Strategic Systems Programs, the FBM program manager, with mission responsibility for the safeguard of FBM nuclear technologies. This budget supports efforts directed at improving the current technological baseline through a series of studies focusing on land and waterside requirements, including both surface and underwater. Collectively, these efforts will improve countermeasure technologies addressing detection, delay and denial.</p> <p>The TRIDENT II effort supports the SSBN Planning and Operational Flexibility (SPOF) that is the follow-on program to the SLBM Retargeting System (SRS) program. SPOF provides targeting planning tools and added connectivity between United States Strategic Command (STRATCOM), Naval Surface Warfare Center (NSWC) Dahlgren and the Fleet. SPOF will provide the following new capabilities in response to initiatives required by STRATCOM and substantiated by the Nuclear Posture Review (NPR): 1) improved flexibility and responsiveness, 2) enhanced accuracy and effectiveness, and 3) information management and the decision making tools/capabilities.</p> <p>The Reliable Replacement Warhead Program (RRW) is an effort to provide reliable replacement warheads to the nation's nuclear stockpile. The program will allow the design of replacement warheads that are more efficient to manufacture, are safer and more secure, eliminate environmentally hazardous materials, and increase design performance margins. The design of RRW will enable transformation to a more efficient and responsive nuclear weapons research, development, and production infrastructure in support of the Nuclear Posture Review and the requirements of the new Strategic Triad.</p> <p>The TRIDENT Submarine System Improvement Program develops and integrates command and control improvements needed to maintain TRIDENT Submarine operational capability through the life cycle of this vital strategic asset. The program conducts efforts needed to maintain strategic connectivity, ensure platform invulnerability, and reduce lifecycle costs through Obsolete Equipment Replacement (OER) and commonality.</p>

**A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

This project supports implementation of a coordinated Navy/Air Force Reentry System Applications Program (RSAP), a coordinated Navy/Air Force Strategic Guidance Applications Program (GAP), a coordinated Navy/Air Force Strategic Propulsion Applications Program (SPAP), and a coordinated Department of Defense Radiation Hardened Applications Program (RHAP). Reentry vehicle and guidance technology had been rapidly eroding beyond the point of being capable to respond to increasing aging phenomena and future requirements. The SPAP program, which commenced in FY 2004, demonstrates and validates technologies unique to strategic missile applications. The RHAP program, which commence in FY 2004, address production, qualification and manufacturing issues associated with strategic and space radiation hardened electronics. The December 2001 DOD Nuclear Posture Review determined that infrastructure is a critical part of the new triad and these efforts form part of the infrastructure that supports the nuclear force structure.

The RSAP program, through sustainment of the reentry vehicle technology base, will maintain confidence in the dependability and reliability of strategic SLBM and ICBM weapon systems over the long term when no new systems will be in development. Critical and unique attributes necessary for the design, development and in-service support of current and modernized SLBM reentry systems have been defined and will be maintained to insure a functioning readiness application technical capability in reentry is preserved. Working closely with the Air Force, Navy and Air Force requirements have been integrated into a comprehensive program. The program maintains close coordination with the DOD Science and Technology (S&T) community in order to: leverage S&T programs, ensure system driven technology base requirements are considered in contract awards, eliminate duplication of effort and provide an opportunity to demonstrate appropriate emerging technologies through a reentry flight test evaluation process.

The GAP program provides a minimum strategic guidance core technology development capability consistent with the Strategic Advisory Group (SAG) recommendations to COMSTRATCOM. The SAG recommend that SSP establish a program which preserves this critical design and development core. It is a basic bridge program which develops critical guidance technology applicable to any of the existing Air Force/Navy strategic missiles. The objective is to transition from current capability to a long term readiness status required to support deployed systems. Air Force and Navy guidance technology requirements are integrated and needs prioritized. Efforts are focused on alternatives to technologies identified as system "weak links." Currently system accuracy and functionality depends upon key technologies which provide radiation hardened velocity, attitude and stellar sensing capabilities. As the underlying technologies that currently provides these capabilities age and are no longer technically supportable, modern alternatives must be made available in order to allow for orderly replacement. there is no commercial market for these technologies and their viability depends on the strategic community.

The SPAP program is a coordinated Navy/Air Force effort and addresses infrastructure needs by exercising critical development skills to allow for future large-scale rocket motor test firings. A sound base of demonstrated technologies suitable for Strategic Missile applications will be maintained and will provide the nation a talent base and source of technologies suitable for a follow-on development program. Boost propulsion (missile stages), post boost propulsion (missile payload delivery vehicle) and Ordnance (separation events and flight termination events and are all integral parts of missile propulsion application efforts. As a result of affordability reductions made to the Technical Applications programs during the POM-08 process, the SPAP program will be terminated beginning in FY2008.

The RHAP program sustains critical skills in radiation hardened electronics by advancing radiation hardened simulation technologies to reflect the processes in future systems. These efforts become of greater importance because of the shrinking industrial base for radiation hardened electronics, the unavailability of underground testing resources, and the loss of radiation hardened expertise. These efforts are coordinated by the Radiation Hardened Oversight Council (RHOC) chaired by the Director, Defense Research & Engineering (DDR&E). The RHAP program focuses on a coordinated Productization & Qualification Program which provides a transition between Science Technology (S&T) and production by efficient utilization of limited resources, sharing of information to eliminate redundancy, increased use of common part/technologies, coordination into the RHOC technology road map and implementation of the OSD (AT&L) investment strategy. The RHAP compliments the GAP electronic part activities by specifically focusing on those tasks required to ensure producibility of radiation hardened parts. As a result of affordability reductions to the Technical Applications programs during the POM-08 process, the RHAP program will be terminated beginning in FY2008.

(U) (\$26.6) Continue Reentry System Applications Program. Fully obligated.

FY 2006 efforts include:

- (U) Maintain the current capability and support the planned service life extension of Navy reentry systems.
- (U) Continue development and ground testing of reentry vehicle candidate heatshield and nosetip materials including those available from Science & Technology (S&T)
- (U) Flight test alternative low-cost heatshield and replacement nosetip material.
- (U) Flight test operationally aged heatshields to support aging trends and replacement materials assessments.
- (U) Complete development and flight test advanced reentry instrumentation such as inertial sensor and avionics computer, encapsulated on the updated engineering instrumentation package.
- (U) Maintain RSAP technical program plan, conduct system assessments and continue Vulnerability & Hardening certification process development in absence of Nuclear Under Ground Testing (UGT) facilities.
- (U) Continue Reentry Body material development and advanced flight test instrumentation activities.
- (U) Continue development of advanced GPS receiver
- (U) Ground test advanced reentry material systems and advanced instrumentation components.
- (U) Develop test instrumentation to demonstrate D5LE missile reentry body interface compatibility.

(U) FY 2007 PLAN

(U) (\$27.0) Continue Reentry System Applications Program. Full obligation is projected by the 3rd Quarter of the first year.

FY 2007 efforts include:

- (U) Maintain the current capability and support the planned service life extension of Navy reentry systems.
- (U) Continue development and ground testing of reentry vehicle candidate heatshield and nosetip materials including those available from Science & Technology (S&T)
- (U) Flight test alternative low-cost heatshield and replacement nosetip material.
- (U) Flight test operationally aged heatshields to support aging trends and replacement materials assessments.
- (U) Complete development and flight test advanced reentry instrumentation such as inertial sensor avionics computer, encapsulated on the updated engineering instrumentation package.

Guidance Application Program (GAP)	21.1	21.4	17.5	17.4
RDT&E Articles Quantity				

(U) FY 2006 PLAN

(U) (\$21.1) Continue Strategic Guidance Applications Programs (GAP). Fully obligated.

FY 2006 efforts include:

- (U) Complete the prototype virtual system simulation model and demonstrate models in a closed-loop system. Modeling and simulation support for sub-system design and Hardware in the Loop (HWIL) infrastructure development.
- (U) Continue to evaluate alternate sensor technologies, (accelerometer, gyro, and stellar) and proximity electronics for application in the D5 Life Extension Guidance system and/or replacement of system weak links. Evaluate prototype radiation-hard sensor build and test results for appropriate applications.
- (U) Continue design, build and evaluate Silicon Oscillator Accelerometer (SOA) support electronics and improved build processes. Prove SOA capability to meet Rad-Hard strategic goals.
- (U) Alternate Pendulous Integrating Gyro Accelerometer (AltPIGA) Develop producible long life, low cost hemispherical gas bearing wheel.
- (U) Hemispherical Resonator Gyro (HRG). Examine and demonstrate technologies for reducing long term bias trending. Improve performance during and following shock and vibration events.
- (U) Interferometric Fiber Optic Gyro (IFOG). Improve IFOG proximity electronics hardness to strategic radiation levels.

(U) FY 2007 PLAN

(U) (\$21.4) Continue Strategic Guidance Applications Programs (GAP). Full obligation is projected by the 3rd Quarter of the first year.

FY 2007 efforts include:

- (U) Support the Inertial Measurement Unit (IMU) system integration effort, model simulation development in support of the enhanced ground testing (EGT) task, support remaining non-real-time subsystem/system simulation effort and support software Verification & Validation (V&V) testing.
- (U) Continue to evaluate alternate sensor technologies, (accelerometer, gyro, and stellar) and proximity electronics for application in the D5 Life Extension Guidance system and/or replacement of system weak links. Evaluate prototype radiation-hardened sensor build and test results for appropriate applications.
- (U) Continue design, build and evaluate SOA support electronics and improved build processes. Test the all-silicon SOA in a strategic radiation environment.
- (U) (AltPIGA) Develop producible long-life, low cost hemispherical gas bearing wheel and commercial processes/vendors for mass produced flexure/pick off assemblies for AltPIGA.
- (U) (IFOG) Build and radiation test complete sense head. Perfect technologies and processes for producing low cost Rad-Hard fiber. Conduct investigations to improve circumvention and recovery performance.
- (U) (HRG) Improve benign scale factor performance. Examine and demonstrate technologies for reducing long term bias trending. Improve performance during and following shock and vibration events.

**B. (U) Accomplishments/Planned Program**

(U) FY 2008 PLAN

(U) (\$17.5) Continue Strategic Guidance Applications Programs (GAP). Full obligation is projected by the 3<sup>rd</sup> quarter of the first year.

FY 2008 efforts include:

- (U) Production and Qualification (P&O) of OPTELECOM-based components for use in strategic grade sensors (e.g.fiber light source, integrated optics chip, couplers.).
- (U) Continue to evaluate emergent alternate sensor technologies, (accelerometer, gyro, and stellar) with an emphasis on providing existing performance in a significantly reduced form factor.
- (U) Assess feasibility of advanced stellar sensor technologies for use a strategic application; specifically, active pixel and camera-on-a-chip architectures will be evaluated.
- (U) Utilize the capabilities of the Virtual System Simulation (VSSim) to conduct system trade studies that support precision guidance application for boost phase and boost-thru-reentry scenarios.
- (U) Complete the development of alternate sources for critical components required to support D5LE emergent sensors.
- (U) Conduct investigations to improve circumvention and recovery performance.
- (U) (SOA) Continue design, build, evaluate and demonstrate SOA as a strategic grade accelerometer.

(U) FY 2009 PLAN

(U) (\$17.4) Continue Strategic Guidance Applications Programs (GAP). Full obligation is projected by the 3<sup>rd</sup> Quarter of the first year.

FY 2009 efforts include:

- (U) Production and Qualification (P&O) of OPTELECOM-based components for use in strategic grade sensors (e.g.fiber light source, integrated optics chip, couplers.).
- (U) Continue to evaluate emergent alternate sensor technologies, (accelerometer, gyro, and stellar) with an emphasis on providing existing performance in a significantly reduced form factor.

<p><b>A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION</b></p> <p>The Enhanced Special Weapons effort supports the Nuclear Weapons Security program and SSBN Escort mission. The policies and requirements regarding the safeguard of nuclear weapons within the Department of Defense is established by DoD S5210.41M. Within the Department of the Navy, nuclear weapons are limited to TRIDENT Fleet Ballistic Missiles (FBM), either deployed aboard TRIDENT submarines or located landside at Naval Submarine Base, Kings Bay or Naval Submarine Base, Bangor where missiles are first assembled as well as repaired. The Chief of Naval Operations (CNO) has assigned the Strategic Systems Programs, the FBM program manager, with mission responsibility for the safeguard of FBM nuclear assets. More specifically, the mission includes landside and pier operations as well as transits to and from the dive point, each of which present challenges to personnel as well as existing technologies. This budget supports efforts directed at improving the current technological baseline through a series of studies focusing on land and waterside requirements, including both surface and underwater. Collectively, these efforts will improve countermeasure technologies addressing detection, delay and denial.</p>

(U) FY 2007 PLAN

(U) (\$35.0) Enhanced Special Weapons/SSBN Escort Mission. Full obligation is projected by the 3<sup>rd</sup> quarter of the fiscal year.

FY 2007 efforts include:

(U) Initiate Development and Test of a prototype system consisting of two independent palletized units. Two units are required in order to properly demonstrate "system-level" capabilities and countermeasure effectiveness while operating in an at-sea scenario.

(U) FY 2008 PLAN

(U) (\$5.0) Enhanced Special Weapons/SSBN Escort Mission. Full obligation is projected by the 3<sup>rd</sup> quarter of the fiscal year.

FY 2008 efforts include:

(U) Complete prototype development and test program. Once the prototypes are completed, plans are to continue with follow-on tests and proofing as a lead in to production which is now planned for FY 2009. Participants in the program will continue to be TARDAC and MIT as the technical and scientific experts and SPA as management's support in addition to the winner of the prototype competition being run in FY 2007.

(U) FY 2007 PLAN

(U) (\$6.0) Enhanced Special Weapons/Nuclear Weapons Security program. Full obligation is projected by the 3<sup>rd</sup> quarter of the first year.

FY 2007 efforts include:

(U) Underwater Close-in Defense: This effort is focused on developing an advanced underwater vehicle and diver detection and deterrence system for the protection of high value maritime assets while they are in port. The conceptual system involves a physical net-like barrier that combines use of fiber-optic sensing and alerting technology to provide an extremely high positive detection rate and extremely low false alarm rate. The concept design also includes increased alert time to improve positive identification of intruders and for activation of response systems.

(U) Remotely Operated Weapons Technologies: This task is directed to enhancing the current ROWs technology that uses direct copper connection and modifies it to a network for Navy applications. In addition, new features (i.e. target tracking) for added capabilities will be researched and prototyped.

(U) Land Water Interface Sensors: This effort includes research into existing sensor technologies to improve capabilities in areas where current sonar's and land based sensors capabilities could be improved. Initial findings are expected to be sufficient to warrant development and test of prototype.

(U) Technology Reviews: This task involves reviews and assessments of technologies and advanced concepts for applicability or potential adaptation to protective measures required for safeguard of nuclear assets.

(U) Access Doors: This task explores developing new concepts, technologies and designs for doors and closures protecting nuclear assets.

(U) Final Denial Technologies: This task explores concept weapons, microwaves, acoustic devices, etc. for application to denial requirements related to protection of nuclear assets.

(U) Smart Sensors : This task researches new technologies and concepts for detecting explosives or explosive devices from greater distances than currently available.

(U) Research and study leading to new or improved technologies in both active and passive protection systems to be used in the safeguarding of Navy's nuclear assets.

(U) FY 2008 PLAN

(U) (\$0.9) Enhanced Special Weapons/Nuclear Weapons Security program. Full obligation is projected by the 3<sup>rd</sup> Quarter of the first year.

FY 2008 efforts include:

**D. (U) Acquisition Strategy:**

Procurements are being executed through a combination of private contractors (large and small business), government Centers of Excellence (COEs), other government agencies and the Naval Submarine Bases, Kitsap and Kings Bay. Contract awards are based upon "best value" determinations, and where practical will be performance based or include incentive provisions.

**E. (U) Major Performers:**

- TBD - Marinization of Integrated Army Active Protection System (IAAPS) and deliver two (2) operational prototype units.
- NFESC/CA - Underwater Close-in defense
- DOE/NM - Technology Reviews
- APL/MD - Remotely Operated Weapons technologies; final denial technologies.

<p><b>A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION</b></p> <p>The Reliable Replacement Warhead Program is a joint DOE and DoD effort to provide reliable replacement warheads to the nations nuclear stockpile. As further reductions continue to be made to the stockpile, the long-term implications of successive refurbishments of the legacy warheads from the Cold War must be considered. Each refurbishment is further from the tested configurations of these highly optimized systems, raising concerns about the ability to ensure stockpile safety and reliability over the very long term without underground nuclear testing. By relaxing Cold War design constraints (e.g. maximum yield in a minimum size/weight package), the RRW program will allow the design of replacement warheads that are more efficient to manufacture, are safer and more secure, eliminate environmentally hazardous materials and increase design performance margins, thus ensuring long-term confidence in reliability and a correspondingly reduced chance of requiring nuclear tests. Improving safety and security in a post-9/11 threat environment is a primary objective. RRW provides opportunities to incorporate the latest technological advances for precluding unauthorized use and access. RRW will enable transformation to a more efficient and responsive nuclear weapons research, development, and production infrastructure in support of the Nuclear Posture Review and the requirements of the new Strategic Triad. Once it can be demonstrated that replacement warheads can be produced on a timescale in which geopolitical threats could emerge, or respond in a timely way to technical problems in the stock pile, then non-deployed warheads can be further reduced and meet the President's vision of the smallest stockpile consistent with the nation's security requirements. In 2005, an RRW design competition was initiated in which two independent design teams from the nuclear weapons labs explored RRW options. In December 2006, the Nuclear Weapons Council on selecting a The team selected will lead the development of an RRW design to replace a portion of the deployed warheads for the Navy's TRIDENT SLBM system. In partnership with the selected design team, the DoD and NNSA will conduct a study to further define the design and develop detailed cost estimates for RRW development and production. This estimate will form the basis of the POM-10 input. The numbers shown here are the DoD dollars required to develop the cost estimate and the current estimate of the DoD portion of the effort required for the first two years of the design and development effort.</p>

0004C				
Title of Congressional Add - Thin Plate Pure Lead Technology	3.500			

Thin Plate Pure Lead Batteries - Submarine main storage batteries are the primary back-up source of power for nuclear submarines. Thin Plate Pure Lead technology (TPPL) is designed to improve the efficiency of the chemical reaction that occurs on the plates of batteries. Hence, incorporating TPPL technology into submarine batteries could significantly increase the achievable energy, power density and life of future submarine batteries. This effort would attempt to scale up the current TPPL product to a size suitable for use in submarine main storage batteries. It is possible that by coupling TPPL plates with VRLA battery technology, the Navy could further increase the energy, power density and life of VRLA submarine main storage batteries. The increase in battery life could result in a commensurate reduction in life cycle cost. The \$3.5M received will continue the research and development program to support the development and manufacture of TPPL technology for submarine main storage battery applications.

	FY 06	FY 07		
9A66N				
Advanced Conventional Strike Capability (SLIRBM)		1.295		

A study will be conducted utilizing the baseline data developed during performance of the Submarine Launched Intermediate Range Ballistic Missile (SLIRBM) Boost Motor Demonstration contracts. This study will focus on providing best value missile system design concepts. Cost considerations will include development, production, operational, and disposal costs over the life of the program. This Congressional add belongs to SSP.

	FY 06	FY 07		
9A67N				
Free Electron Laser Facility		1.345		

The Free Electron Laser Program is for advanced capability Linear Accelerator (LINAC) to include a three stage accelerator section and an electron storage ring that will reduce the main limitation (electrical noise and micro-beam structure) of current LINAC technology. The enhanced LINAC will allow future large chips to be tested while meeting strategic test requirements. This Congressional add belongs to SSP.

9999 CONGRESSIONAL ADD	3.937							

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

(0793) A Service Life Assessment of selected critical components is being performed on the E-6B. The original E-6A service life of this airframe was 27,000 hours based on a prescribed weight and expected operational usage. Current E-6B weight and operational usage exceed those original values and lessen, by some unknown value, the original 27,000 hours airframe service life. SLAP is a two-phase program. Phase 1 is conducting a general study to define the critical locations using data gathered from the fleet and previous test data. Phase 1A will use data gathered during Phase 1 to develop a finite element model. Phase 2 will conduct the detailed analyses of the critical locations. The contractor will analyze fleet aircraft and review onboard recorder data in order to generate an updated loads spectrum. The contractor will update the external/internal loads analysis associated with the updated loads spectrum and operational usage data. Utilizing the data from the first two steps, the contractor will update the existing E-6B Durability and Damage Tolerance Assessments. This data will then allow the contractor to update the Reliability-Centered Maintenance (RCM) analysis, and optimize the E-6B Maintenance Plans. The contractor will perform preliminary high level trade studies of potential modifications to increase the service life.

(3002) The E-6B Block I program corrects Airborne National Command Post program FOT&E operational suitability deficiencies and addresses legacy system obsolescence issues. Without the Block I program, legacy system obsolescence will result in several unsupportable mission systems by 2010. Block I consists of the design, development, integration, and testing of the replacements for the existing Digital Airborne Intercommunications Switching System (DAISS) / Intercommunications System (ICS), Mission Computer System (MCS), and Ultra-High Frequency Command, Control and Communications (UHFC3) system. The Block I project also incorporates a Multi-level Security (MLS) Open Systems Architecture (OSA), and adds improved operator workstations throughout the aircraft to reduce workload and improve system interoperability, and provide a foundation for future evolutionary upgrades. Other modifications include: An additional Auxiliary Power Unit (APU) to enhance power and cooling capabilities supporting the additional systems in the MLS OSA, address impacts of Internet Protocol Bandwidth Expansion (IPBE) changes to the Block I baseline aircraft, a Very Low Frequency Transmitter (VLF-TX) obsolescence replacement, and High Power Transmit Set (HPTS) subsystem refurbishment.

(9999) CONGRESSIONAL ADD: The E-6B Aircraft Block I Mod program: APU/Environmental Control System (ECS) upgrade. This funding added to the Block I Program performs non-recurring engineering to modify the ECS to accommodate obsolescence, to include Secure Telephone Equipment (STE) and Time Frequency Distribution (TFD)-8000 updates, in the Block I Mod design prior to developmental testing.

B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009

APPROPRIATION/BUDGET ACTIVITY RESEARCH DEVELOPMENT TEST & EVALUATION, NAVY / BA-7	R-1 ITEM NOMENCLATURE 0101402N, NAVY STRATEGIC COMMUNICATIONS	

Schedule:

(0793) Delays in Phase 1 contract award resulted in Phase 2 delays due to contract renegotiations. Phase 2 must be completed before Milestone C can be reached, so MSC has been moved from 4Q FY07 to 1Q FY08.

(3002) Changes in the schedule are a result of additional funding to support the APU/ECS upgrade and IPBE impacts to the pre-Block I baseline aircraft. Design Readiness Review was moved from 1Q to 2Q FY07 to align with System Integration Lab (SIL) Test Readiness Review at which point the design will be ready for testing. SIL integration has been extended to 2Q FY07 due to commercial component availability.

Technical:

(3002) Due to the additional funding the following efforts have been added to the program: Environmental Control System (ECS), Auxiliary Power Unit (APU), High Power Transmit Set (HPPTS), Very Low Frequency Transmitter (VLF-TX), and the Internet Protocol Bandwidth Expansion (IPBE) upgrade effort.

Funding supports the E-6B Service Life Assessment Program, which includes the following efforts: assemble and deliver GFI; assist contractor in developing critical location selection criteria; develop finite element model; perform RCM Analysis; assess scheduled maintenance impacts; perform supportability analysis; attend technical review meetings; review and correct CDRLs; determine the load-to-strain/stress relationships for each critical location; generate a service spectra and calculate critical location fatigue lives that 85 percent of the fleet should exceed; perform damage tolerance analysis to determine critical location inspection techniques and intervals; evaluate life enhancement potential for life-critical locations; modify the LOOPIN fatigue damage algorithms to accept available individual aircraft data (3M, NAVAIR form 13920/1, Structural Data Recording Set (SDRS), and structural configuration) to calculate individual aircraft fatigue life expended (FLE) values for all critical locations; validate SDRS for baseline individual aircraft FLE values; develop damage tolerance algorithms to accept available individual aircraft data (3M, NAVAIR form 13920/1, Structural Data Recording Set (SDRS), and structural configuration) to calculate individual aircraft crack size (growth) values for all critical locations.

C. OTHER PROGRAM FUNDING SUMMARY:

	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost
056400 E-6 A/B Series	11.068	58.647	126.185	106.224	112.748	126.862	125.201	116.273	451.067	1,234.275

D. ACQUISITION STRATEGY:

SLAP is a sole source program due to the proprietary nature of the data needed to complete the required studies and analyses. Each phase of SLAP will be awarded a separate cost-reimbursable delivery order under a Basic Ordering Agreement (BOA) with Boeing.

EXHIBIT R-2a, RDT&E Project Justification

DATE:  
February 2007

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0101402N, NAVY STRATEGIC COMMUNICATIONS			PROJECT NUMBER AND NAME 3002, NAVY STRATEGIC COMMUNICATIONS BLOCK I

3002 NAVY STRATEGIC COMMUNICATIONS BLOCK I	30.600	37.317	36.531	31.725	39.807	15.453	9.047	
RDT&E Articles Qty	1	1						

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

(3002) The E-6B Block I program corrects Airborne National Command Post program FOT&E operational suitability deficiencies and addresses legacy system obsolescence issues. Without the Block I program, legacy system obsolescence will result in several unsupported mission systems by 2010. Block I consists of the design, development, integration, and testing of the replacements for the existing Digital Airborne Intercommunications Switching System (DAISS) / Intercommunications System (ICS), Mission Computer System (MCS), and Ultra-High Frequency Command, Control and Communications (UHFC3) system. The Block I project also incorporates a Multi-level Security (MLS) Open Systems Architecture (OSA), and adds improved operator workstations throughout the aircraft to reduce workload and improve system interoperability, and provide a foundation for future evolutionary upgrades. Other modifications include: An additional Auxiliary Power Unit (APU) to enhance power and cooling capabilities supporting the additional systems in the MLS OSA, address impacts of Internet Protocol Bandwidth Expansion (IPBE) changes to the Block I baseline aircraft, a Very Low Frequency Transmitter (VLF-TX) obsolescence replacement, and High Power Transmit Set (HPTS) subsystem refurbishment. Block I Systems Integration Lab (SIL) RDT&E articles will be procured and installed to support Contractor Testing (CT), Developmental Testing (DT), and Operational Testing (OT). The SIL comprises a fully functional set of E-6B mission avionics in a lab environment. The purpose of the SIL is to reduce risk and verify the design prior to pre-production aircraft modification. During CT, DT, and OT, the SIL will be used where feasible to reduce total flight test hours and costs. Pre-production aircraft RDT&E articles will be procured to support CT, DT, and OT testing.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Conducted Aircraft Critical Design Review (CDFY 2006	FY 2007	FY 2008	FY 2009	
Accomplishments / Effort / Sub-total Cost	3.443	8.323	9.879	3.342
RDT&E Articles Qty				

Funding supports acquisition planning, acquisition strategy adjustment, requirements analysis and refinement, industry conferences, DoD 5000 series document development and revision, program management, technical review and oversight, Systems Integration Lab modification and test, contract management activities, preliminary and critical design reviews, CDRL reviews, technical interchange and program management meetings; developmental and operational test and evaluation planning, execution, and reporting in support of government review and design approval for the replacement of DAISS, MCS, UHF C3 System, incorporation of MLS OSA with new servers, operator stations, fixes in ground electrical, and cooling capabilities for austere operations. Development of design changes to accommodate Internet Protocol Bandwidth Expansion (IPBE) impacts to the pre-Block I baseline aircraft, will begin in FY07. The Block I Recapture (Block IA), which includes the Auxiliary Power Unit (APU), the High Power Transmit Set (HPTS), and the Very Low Frequency Transmitter (VLF-TX), will begin in FY08.

CDR and Systems Integration Lab (SIL) Support	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	2.846	2.677	2.873	3.017
RDT&E Articles Qty				

Funding supports engineering, management, trade studies, studies and analysis contract support services for acquisition planning and development of acquisition documents, schedule development and monitoring, industry conferences, DoD 5000 series document development and revision, engineering and C3 architectural studies and analysis, Systems Integration Lab modification and test, logistics planning, training planning and CDRL reviews for the replacement of DAISS, MCS, UHF C3 System, incorporation of MLS OSA with new servers and operator stations, and fixes in ground electrical and cooling capabilities for austere operations. Development of design changes to accommodate Internet Protocol Bandwidth Expansion (IPBE) impacts to the pre-Block I baseline aircraft, will begin in FY07. The Block I Recapture (Block IA), which includes the Auxiliary Power Unit (APU), the High Power Transmit Set (HPTS), and the Very Low Frequency Transmitter (VLF-TX), will begin in FY08.

9999 CONGRESSIONAL PLUS-UPS	958	3,985	0	0	0	0	0	0

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:** The mission of the Rapid Technology Transition (RTT) program is to increase the rate that new, innovative, and potentially disruptive technologies are inserted into DON acquisition programs and the hands of the warfighter. A key aspect of the RTT program is its charter to transition technology from any source, including those not traditionally associated with defense technology. An effective and robust integration of commercial and military technologies can reduce costs and improve naval capabilities by keeping pace with the fast moving changes in technologies and operational needs. The RTT program is structured to bring transition deals to closure quickly, and to provide execution year funding for a rapid start, bridging the gap until the program of record can fund the completion of the technology insertion.

Rapid transition opportunities occur when a sufficiently mature technology is identified that can meet a particular need on a timetable which matches that of an acquisition program, and is supported by a business case which justifies the associated cost and schedule risk. The combination of circumstances which create such opportunities can appear, and disappear, well inside the Program Objectives Memorandum (POM) cycle. The RTT program is designed to be pro-active in identifying opportunities and to work with resource sponsors,

fleet and force users, and Program Managers (PMs) in constructing viable technology transition deals one at a time.

To ensure the widest possible awareness of emergent commercial technology opportunities, RTT interacts with the venture capital community and industry. The RTT program coordinates closely with Program Executive Offices (PEOs) and PMs to maintain awareness of insertion opportunities. Utilizing existing authorities, RTT applies execution year funds where necessary to "jump-start" transitions so they can be inserted and validated by Sea Trial experiments leading directly to deployment and/or demonstrations of high risk/high payoff technologies.

	FY 2006	FY 2007	FY 2008	FY 2009
<b>RTT</b>	25,420	24,104	33,284	28,422

Technology Insertion for Savings Program (TIPS) is a new start in FY 2007.

### FY 2006 Accomplishments:

- Continued High Voltage Gallium Arsenide Monolithic Microwave Integrated Circuit (MMIC) effort.
- Completed: Enhanced Battlespace Awareness; Technical Control and Analysis Center; Aviation Weapons Information Management System; Oil Content Monitor; Thermobaric Hellfire; and Open Architecture Radar Designated Decoy Launch.
- Cancelled the Erosion Blade Coating Project and redirected to Wireless Network Integration; AIM 9X Sidewinder Extended Battlelife; and Software Defined Handheld Radio Testset.
- Initiated Sprayable Dielectric Coatings and Induction Based Coating Removals efforts.
- Initiated: Radiant Sunrise; Tactical Control System Digital Video Enhancements; Expanded Maritime Intercept Operations Wireless Reachback; Ground Laser Target Designator Battery Reduction Effort; User-Centric Automated Information Manager; Family of signals intelligence (SIGINT) Systems Data Exchange Improvements; Automatic Identification System (AIS) Integration; Virtual Simulation Training (ViSiT) Toolkit; Hull Search, Inspection, and Neutralization - WETBOT; AN/ALQ-99 Band 4 Traveling Wave Tube Replacement Module (TRM); Low Cost Expendable Small Robotic Platform - BomBot; and BA-5590 Battery with State of Charge Indicator.

### FY 2007 Plans:

- Continue all efforts of FY 2006 less those noted as completed above.
- Complete Sprayable Dielectric Coatings and Induction Based Coating Removals efforts.
- Initiate the following Technology Insertion for Savings (TIPS) projects: No-Skid Coatings; Normal Fuel Oil Tanks; Modified Atmosphere Packaging System for Fresh Fruits and Vegetables; and High Pressure Littoral Electrolytic Chlorine Generator. These projects focus on Operations and Savings costs.
- Initiate the following RTT projects for the September 06 Deal Cycle: Digital RF Memory Jammer; Subnet Relay (SNR) and High Frequency Internet Protocol (HF IP); Communications Time/Frequency Different of Arrive Geo-Location; Submarine Tactical Paging; Deployable Alternative Energy Module; and, Airborne Communications

Package ADNS Airborne Network Node.

- Initiate 2-3 new deals in the area of affordability to be presented for approval at the March 07 Executive Review Group.

## **FY 2008 Plans:**

- Continue new efforts initiated in FY 2007.
- Complete all efforts of FY 2006 less those noted as completed FY 2007.
- Initiate 4-6 new thrusts in support of the TIPS program.
- Initiate 6-12 new technology transition deals based on topic areas approved by the Deputy Assistant Secretary of the Navy (RDT&E).

## **FY 2009 Plans:**

- Continue new efforts initiated in FY 2008.
- Complete all efforts of FY 2007 less those noted as completed FY 2008.
- Initiate 4-6 new thrusts in support of the TIPS program.
- Initiate 6-10 new technology transition deals based on topic areas approved by the Deputy Assistant Secretary of the Navy (RDT&E).

## **C. OTHER PROGRAM FUNDING SUMMARY:**

NAVY RELATED RDT&E: All technology investments in DON.

NON-NAVY RELATED RDT&E: All technology investments outside DON.

## **D. ACQUISITION STRATEGY:**

Utilize existing authorities on a case-specific basis to exploit rapid technology transition opportunities.

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET  
Exhibit R-2a

DATE: February 2007

BUDGET ACTIVITY: 07  
 PROGRAM ELEMENT: 0203761N      PROGRAM ELEMENT TITLE: RAPID TECHNOLOGY TRANSITION (RTT)  
 PROJECT NUMBER: 3174      PROJECT TITLE: RAPID DEVELOPMENT AND DEPLOYMENT (RDD)

Project Number & Title	FY 2006 Actual	FY 2007 Estimate	FY 2008 Estimate	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate
3174 RAPID DEVELOPMENT AND DEPLOYMENT (RDD)	0	11,237	0	0	0	0	0	0

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:** Rapid Development and Deployment (RDD) provides an environment and process for rapid development and fielding of prototype solutions to meet urgent needs in the Global War on Terrorism (GWOT). The RDD process applies when existing DON processes cannot meet urgent operational needs. GWOT has generated rapidly evolving military needs that require responsive materiel solutions. RDD is a fast track process for application, by exception, to Navy and USMC capability needs and materiel solutions that meet the following criteria: (1) Need identified during active or incipient combat or contingency operation, or (2) Need derived from combat survivability of the warfighter or impacts the success of the mission. RDD initiates projects to deliver prototype solutions that are not readily available off-the-shelf and that can be developed, integrated with other components and systems (as necessary), tested, and fielded within 270 days of need approval. RDD provides startup funds to initiate projects that meet the above criteria while other funding is made available within the year of execution.

**B. ACCOMPLISHMENTS/PLANNED PROGRAM:**

	FY 2006	FY 2007	FY 2008	FY 2009
<b>RDD</b>	0	11,237	11,472	6,047

RDD is a new start in FY 2007.

**FY 2007 Plans:**

Initiate and complete multiple projects within RDD for urgent warfighter requirements that meet the RDD selection and execution criteria. RDD will initiate 3 to 6 projects.

# UNCLASSIFIED

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET  
Exhibit R-2a

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0203761N

PROJECT NUMBER: 3174

PROGRAM ELEMENT TITLE: RAPID TECHNOLOGY TRANSITION (RTT)

PROJECT TITLE: RAPID DEVELOPMENT AND DEPLOYMENT (RDD)

## **FY 2008 Plans:**

- Continue new efforts initiated in FY 2007.
- Initiate and complete multiple projects within RDD for urgent warfighter requirements that meet the RDD selection and execution criteria. RDD will initiate 3 to 6 projects.

## **FY 2009 Plans:**

- Continue new efforts initiated in FY 2008.
- Complete all efforts of FY 2007 less those noted as completed in FY 2008.
- Initiate and complete multiple projects within RDD for urgent warfighter requirements that meet the RDD selection and execution criteria. RDD will initiate 3 projects.

## **C. OTHER PROGRAM FUNDING SUMMARY:**

NAVY RELATED RDT&E: All RDT&E in DON.

## **D. ACQUISITION STRATEGY:**

For RDD requirements that meet the selection criteria, the virtual Naval Innovation Laboratory (NaIL) is used to initiate projects. The NaIL is a virtual organization operating across Naval Laboratories and Warfare Centers, with interfaces and/or contractual agreements with other Military Services, Industry, Academia and the National Laboratory community. The NaIL will bring together, on demand, multi-disciplinary teams to develop and deliver rapid, innovative solutions. The NaIL will maintain an inventory of specialized RDT&E capabilities within the community, and will maintain visibility of available and emerging technologies from all sources that may serve as enablers to the success of RDD initiatives. The NaIL will review Urgent Combat Needs, identify and evaluate alternative solutions and provide recommendations. The NaIL will include a rapid acquisition channel, consistent with all applicable procurement regulations, for access to industry products and services as needed. For approved projects, the NaIL will select appropriate technologies, and develop, integrate, test, and deliver fieldable prototypes with the essential logistics for use by the warfighter. End users will be involved throughout the process as part of the virtual team.

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET  
Exhibit R-2a

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0203761N

PROJECT NUMBER: 9999

PROGRAM ELEMENT TITLE: RAPID TECHNOLOGY TRANSITION (RTT)

PROJECT TITLE: Congressional Plus-Ups

## CONGRESSIONAL PLUS-UPS:

	FY 2006	FY 2007
120MM TANK HIGH EXPLOSIVE PLASTIC (HEP) CARTRIDGE	958	3,985

This effort supported development of the 120MM high explosive plastic ammunition to be used specifically for breaching structures in the urban warfare environment. This effort supported the USMC solution planning directive for the M1A1 Breaching Round Universal Need Statement.

--	----------------------------

APPROPRIATION/BUDGET ACTIVITY <b>RESEARCH DEVELOPMENT TEST &amp; EVALUATION, NAVY /</b>	<b>BA-7</b>		R-1 ITEM NOMENCLATURE 0204136N F/A-18 SQUADRONS					
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013
Total PE Cost	83.538	39.279	44.891	66.289	66.256	60.956	52.142	35.438
1662 F/A-18 Improvements	19.321	24.615	41.950	66.289	66.256	60.956	52.142	35.438
2065 F/A-18 RADAR Upgrade	55.849	6.346	2.941					
9999 Congressional Adds	8.367	8.318						

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The F/A-18 is capable of using external equipment to perform either fighter or attack missions. The capabilities of the F/A-18 weapon system can be upgraded to accommodate and incorporate new or enhanced weapons as well as advances in technology to respond effectively to emerging future threats. Continued development capability is required to successfully optimize new F/A-18 weapon system capabilities in the Fleet and to ensure interoperability in a network centric environment. Additionally, continued improvements in reliability and maintainability are necessary to ensure maximum benefit is achieved through reduced cost of ownership and to provide enhanced availability.

**F/A-18 Improvements:** The F/A-18 is a multi-mission strike fighter aircraft that is used in both fighter and attack roles through selected use of external equipment (fuel tanks, targeting/navigation, Advance Targeting Forward Looking Infrared (ATFLIR) pods, and various bomb/missile launching racks). Additional capabilities are required for interoperability in a network-centric operational environment. In order to respond effectively to emerging future threats, F/A-18 aircraft capabilities are being upgraded to incorporate new/enhanced weapons systems and avionics including the Joint Helmet Mounted Cueing System (JHMCS), development of the F/A-18 E/F Advanced Crew Station (ACS), replacement of Automatic Carrier Landing System (ACLS) in the F/A-18, and upgrade of the existing Global Positioning System/Inertial Navigation System in order to meet precision strike/precision approach requirements. Continued hardware/software development is required to successfully optimize fleet F/A-18 weapons systems for interoperability in a network centric operational environment, to include: increased software capabilities, potential new hardware capabilities, upgrading existing hardware, and network centric warfare upgrades. Additionally, a continuing capability is needed to perform technical evaluations/investigative flight testing and improve software based on reported fleet problems. This funding line also includes F/A-18E/F weapons integration requirements where a new capability is added to the aircraft, to include Dual Mode Weapons. FY08 New Start Programs bringing additional capabilities are: an Infrared Search and Track (IRST) and Integrated Defensive Electronic Counter Measures (IDECM) integrated with the Active Electronically Scanned Array (AESA) to provide Narrow Band High Gain Electronic Attack. This budget also now contains funding for F/A-18A-F Test Wing Maintenance support.

R-1 SHOPPING LIST - Item No. 170

# UNCLASSIFIED

## CLASSIFICATION:

EXHIBIT R-2, RDT&E Budget Item Justification		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RESEARCH DEVELOPMENT TEST &amp; EVALUATION, NAVY / BA-7</b>	R-1 ITEM NOMENCLATURE 0204136N F/A-18 SQUADRONS	
<p><b>F/A-18 Radar Upgrade:</b> The F/A-18 Radar Upgrade, Active Electronically Scanned Array (AESA) development program, beginning in FY 1999, is the last of three pre-planned upgrades to the F/A-18 Type/Model/Series radar. The AESA corrects operational test deficiencies noted in the AN/APG-73. It provides for multi-target tracking, Synthetic Aperture Radar (SAR) imagery, SAR Target Location Error (TLE), and improved spotlight map resolution. In addition, it provides for greater lethality than previous F/A-18 radars by allowing for full tactical support of existing and planned air-to-air (A/A) and air-to-ground (A/G) weapons and it significantly increases A/A and A/G detection and tracking ranges. The AESA provides greater survivability through self-protection and standoff jamming capabilities, while its greater range allows for reduced detection by enemy radar. The AESA is also more affordable than previous radars. Significant savings in operating and support costs can be realized through a five fold increase in reliability over the AN/APG-73 as well as incorporating open architecture and Higher Order Language software. Additionally, savings can be realized by avoiding parts obsolescence redesign costs that will be experienced on the AN/APG-65 and AN/APG-73.</p> <p><b>Congressional Adds:</b></p> <p><b>Military Rapid Response Command Information System:</b> The Military Rapid Response-Command and Information System (MRRCCIS) is a command, control, and communications mobile ground node that will provide enhanced connectivity between Naval TACAIR (F/A-18) weapon platforms and USMC's Expeditionary Warfare ground C2 nodes such as the On-the-Move Network Digital Over Horizon Radio System (CONDOR) and Joint Forces Command's Rapid Attack Information Dissemination Execution Relay (RAIDER). This funding will be used to perform a initial proof-of-concept demonstration, system engineering and analysis on new technologies with the long range goal of establishing test and evaluation facilities in Hawaii. This work will leverage off of joint service facilities to test the Sea Power 21/ForceNet concepts above.</p> <p><b>F/A-18E/F Net Centric Operations Upgrades:</b> Improvements within the Network Centric Operations environment to include development and implementation of Blue Force situational awareness, Combat Identification, and Multi-Moving Track Targeting in F/A-18E/F. This Congressional Add develops concept of operations defining joint interoperability and targeting architecture to support planning, development, execution, and analysis of recurring large-scale Joint Force experimentation. Network Centric Operations efforts funded in the F/A-18 Improvements project (1662) will build upon this work.</p> <p><b>F/A-18 A-D Series Tech Manual Conversion: 9A68N</b></p> <p><b>F/A-18 C/D Digital Electronic Warfare System: 9A69N</b></p>

**E. ACQUISITION STRATEGY:**

The F/A-18 Improvements program consists of extensive development projects and integration of avionics systems onto the F/A-18E/F. The major programs within the F/A-18 Improvements project are:

- ANAV. ANAV development is provided on a sole source cost plus fixed fee contract on an R&D Basic Ordering Agreement to Boeing. Procurement of production hardware will be made as CFE through the prime contractor.
- MIDS. An acquisition developmental effort supported by SPAWAR (PMW-780).
- JHMCS. JHMCS development is via a sole source cost plus award fee Joint Air Force contract to Boeing.
- ACLS. ACLS development is provided on a sole source cost plus fixed fee contract on an R&D Basic Ordering Agreement to Boeing. Procurement of redesigned/replacement components will be made as GFE through Naval Undersea Warfare Center.
- IRST. The IRST Phase 1 program is a Navy program\* entering the Systems Design and Development phase at Milestone B in FY08. A Phase 1 system will be developed by the Navy that will meet requirements for a counter electronic attack capability. This capability will reach IOC in FY13.

\*There exists potential US Air Force interest in a Phase II capability to be funded in future POM submits.

2065 RADAR Upgrade	<b>55.849</b>	<b>6.346</b>	<b>2.941</b>					

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The F/A-18 Radar Upgrade, Active Electronically Scanned Array (AESA) development program began in FY1999. It is the last of three pre-planned upgrades to the F/A-18 Type/Model/Series radar. The AESA corrects operational test deficiencies noted in the AN/APG-73. It provides for multi-target tracking, Synthetic Aperture Radar (SAR) imagery, SAR Target Location Error (TLE), and improved spotlight map resolution. In addition, it provides for greater lethality than previous F/A-18 radars by allowing for full tactical support of existing and planned air-to-air (A/A) and air-to-ground (A/G) weapons, significantly increasing A/A and A/G detection and tracking ranges. The AESA provides greater survivability through self-protection and standoff jamming capabilities, while its greater range allows for reduced detection by enemy radar. The AESA is also more affordable than previous radars. Significant savings in operation and support costs can be realized through a five fold increase in reliability over the AN/APG-73 as well as incorporating open architecture and Higher Order Language software. Additionally, savings can be realized by avoiding part obsolescence redesign costs that will be experienced on the AN/APG-65 and AN/APG-73.

**D. ACQUISITION STRATEGY:**

The AESA program employs a two-phase approach with sole source contracts to Boeing, the airframe prime manufacturer. Phase I is a moderate risk reduction phase conducted in FY 1999 and FY 2000. During this phase, Boeing conducted competitive source selection at the radar system subcontract level. A BOA order for RFP development and subcontractor selection was made to conduct this effort. It includes an "845" agreement for prototype development, which includes commercial development/amortization provisions. Conducting the competition early in the program allowed for focused risk reduction and contractor investment. Phase II consisted of a typical System Demonstration program and development contract. The program transitioned to Phase II with a successful Milestone II Decision in FY 2001. When the program entered production in FY03, the "845" agreement allowed the contractor to amortize unreimbursed development costs into the production unit cost. This strategy fully utilizes acquisition reform initiatives such as: early partnering with industry; alpha contracting; leveraging industry investment; optimizing use of Commercial Off-the Shelf software and Non-Developmental Item; Cost as an Independent Variable; and Electronic Data Deliverables.

9614: Mil Rapid Response Combat Info Sys	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	1.635	1.992		
RDT&E Articles Quantity				

The Military Rapid Response-Command and Information System (MRR CIS) is a command, control, and communications mobile ground node that will provide enhanced connectivity between Naval TACAIR (F/A-18) weapon platforms and USMC's Expeditionary Warfare ground C2 nodes such as the On-the-Move Network Digital Over Horizon Radio System (CONDOR) and JFCOM's Rapid Attack Information Dissemination Execution Relay (RAIDER). This funding will be used to perform a initial proof-of-concept demonstration , system engineering and analysis on new technologies with the long range goal of establishing test and evaluation facilities in Hawaii. This work will leverage off of joint service facilities to test the SeaPower 21/ForceNet concepts above.

9839: Network Centric Operations Capability	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	6.732			
RDT&E Articles Quantity				

The Network Centric Operations is a F/A-18 developing interoperability capabilities within the Network Centric operations environment development towards blue force tracker and all weather moving target land attack, and MIDS/JTRS integration.

## (U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

E-2 Improvements provides for product improvements and incorporation of innovative technologies for the evolution of E-2 Battle Management and Command and Control (BMC2) capabilities in support of naval warfare command and control requirements. It has previously funded developments for the modification or replacement of selected weapon replaceable assemblies of current installed subsystems, as well as provided for experimentation with wideband internet protocol (IP) concepts, to include technologies such as High Frequency (HF) Secure IP Router Network (HF SIPRNET), VRC-99 digital IP radio as a surrogate to the Joint Tactical Radio System, machine-to-machine digital data communications, airborne Advanced Digital Networking System (aADNS), Tactical Information Services (TIS), and open architected hardware and software computing environments. These efforts have laid the foundation for growth to provide additional functional capabilities to satisfy evolving operational requirements, e.g., Battle Space Networking, Joint Sensor Netting, Tactical Decision Aids, Advanced communications, and permits the evolutionary growth of a Combat Identification (CID) and Theater Air and Missile Defense (TAMD) Capability. In Flight Refueling (IFR) capability allows the E-2 to receive fuel from various organic and strategic tanker aircraft. It will provide Expanded Battle Space Surveillance and Targeting through significantly enhanced persistence and increased flexibility (range & endurance). IFR will better enable the E-2 to fully support current Carrier Strike Group (CSG)/Joint 24/7 Theater Operations by providing more versatile stationing and/or forward basing options. Previous domestic E-2 concept demonstration effort successfully established the feasibility of tanking behind the F/A-18E/F and KC-130 aircraft. The Automatic Identification System (AIS) is a broadcast transponder system operating in the VHF maritime band that provides data exchange from Ship to Ship, Ship to Shore and Shore to Ship. Broadcast parameters include Registry Number, Port of Origin, Latitude, Longitude, Course, Speed and other vessel characteristics. The current prototype E-2C AIS installation is not integrated into the E-2C weapon system with no means of transfer information off board to other platforms/systems.

Funding provides for evaluation and demonstration of technology for new emergent systems and subsystems. This initiative allows for data collection and the evaluation of new technologies in the context of emerging missions and requirements including Theater Air and Missile Defense, Ballistic Missile Defense, littoral warfare, combat identification, multi-source integration, Airborne Battlefield Command and Control (ABC2) and Single Integrated Air Picture (SIAP), as well as parts and system obsolescence. Emphasis will be upon the following areas: participation in exercises to assess capabilities against emerging threats; identification of deficiencies and candidate solutions; and ground/airborne demonstrations of the identified technologies. Funding also provides for the development of an open architected distributed computing environment and IP networking infrastructure required to enable E-2 Global Information Grid (GIG) connectivity in a digital networking environment, to include the use of High Frequency (HF) data paths. Funding provides for the system development and testing to support the incorporation of In Flight Refueling technology into the E-2 aircraft. Emphasis during system development will be on design drawing updates, fuel system design, human systems integration and design, including interior/lighting modifications and seat replacement. Flight testing is required to evaluate field of view, aerodynamic performance, loads, and handling qualities. Funding will integrate Universal Automatic Information System (UAIS) into the E-2C and E-2D mission computer and provide for a means to transfer Automatic Information System (AIS) data from the aircraft to the warships inflight. The integration will include non-recurring engineering, logistics and test and evaluation to integrate UAIS control features and output into the E-2C and E-2D weapons system and to standardize and document the UAIS hardware already installed on E-2C aircraft, and integrate UAIS hardware on the E-2D. It will integrate other enhancing identification technologies complimentary to UAIS into the E-2C and E-2D.

B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009
Previous President's Budget:	17.022	1.540	1.577	1.592
Current President's Budget:	20.954	9.803	22.691	54.511
Total Adjustments	3.932	8.263	21.114	52.919
Summary of Adjustments				
Congressional Reductions	-0.191			
Congressional Rescissions				
Congressional Undistributed Reductions	-0.552	-0.037		
Congressional Increases	4.500	8.300		
Economic Assumptions			0.111	0.583
Miscellaneous Adjustments	0.175		21.003	52.336
Subtotal	3.932	8.263	21.114	52.919

Schedule:

Project Unit 0463, E-2C Improvements - Schedule changes to AODS, MSI Phase I, and SIAP Block 0 Deployment, which are included in Software Systems Configuration Set 5 (SCS5) functionality, are due to resolution of SCS5 Software Trouble Reports (STRs). Increased STRs have caused additional lab, ground, and flight testing, which resulted from hardware and software deficiencies related to the mission computer and software.

Project Unit 9999, Congressional Adds - Not Applicable.

Technical:

Increased complexity of hardware and software integration has required additional lab, ground, and flight test.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

E-2 Improvements provides for product improvements and incorporation of innovative technologies for the evolution of E-2 Battle Management and Command and Control (BMC2) capabilities in support of naval warfare command and control requirements. It has previously funded developments for the modification or replacement of selected weapon replaceable assemblies of current installed subsystems, as well as provided for experimentation with wideband internet protocol (IP) concepts, to include technologies such as High Frequency (HF) Secure IP Router Network (HF SIPRNET), VRC-99 digital IP radio as a surrogate to the Joint Tactical Radio System, machine-to-machine digital data communications, airborne Advanced Digital Networking System (aADNS), Tactical Information Services (TIS), and open architected hardware and software computing environments. These efforts have laid the foundation for growth to provide additional functional capabilities to satisfy evolving operational requirements, e.g., Battle Space Networking, Joint Sensor Netting, Tactical Decision Aids, Advanced Communications, and permits the evolutionary growth of a Combat Identification (CID) and Theater Air and Missile Defense (TAMD) Capability. In Flight Refueling (IFR) capability allows the E-2 to receive fuel from various organic and strategic tanker aircraft. It will provide Expanded Battle Space Surveillance and Targeting through significantly enhanced persistence and increased flexibility (range & endurance). IFR will better enable the E-2 to fully support current Carrier Strike Group (CSG)/Joint 24/7 Theater Operations by providing more versatile stationing and/or forward basing options. Previous domestic E-2 concept demonstration effort successfully established the feasibility of tanking behind the F/A-18E/F and KC-130 aircraft. The Automatic Identification System (AIS) is a broadcast transponder system operating in the VHF maritime band that provides data exchange from Ship to Ship, Ship to Shore and Shore to Ship. Broadcast parameters include Registry Number, Port of Origin, Latitude, Longitude, Course, Speed and other vessel characteristics. The current prototype E-2C AIS installation is not integrated into the E-2C weapon system with no means of transfer information off board to other platforms/systems.

Funding provides for evaluation and demonstration of technology for new emergent systems and subsystems. This initiative allows for data collection and the evaluation of new technologies in the context of emerging missions and requirements including Theater Air and Missile Defense, Ballistic Missile Defense, littoral warfare, combat identification, multi-source integration, Airborne Battlefield Command and Control (ABC2) and Single Integrated Air Picture (SIAP), as well as parts and system obsolescence. Emphasis will be upon the following areas: participation in exercises to assess capabilities against emerging threats; identification of deficiencies and candidate solutions; and ground/airborne demonstrations of the identified technologies. Funding also provides for the development of an open architected distributed computing environment and IP networking infrastructure required to enable E-2 Global Information Grid (GIG) connectivity in a digital networking environment, to include the use of High Frequency (HF) data paths. Funding provides for the system development and testing to support the incorporation of In Flight Refueling technology into the E-2 aircraft. Emphasis during system development will be on design drawing updates, fuel system design, human systems integration and design, including interior/lighting modifications and seat replacement. Flight testing is required to evaluate field of view, aerodynamic performance, loads, and handling qualities. Funding will integrate Universal Automatic Information System (UAIS) into the E-2C and E-2D mission computer and provide for a means to transfer Automatic Information System (AIS) data from the aircraft to the warships in flight. The integration will include non-recurring engineering, logistics and test and evaluation to integrate UAIS control features and output into the E-2C and E-2D weapons system and to standardize and document the UAIS hardware already installed on E-2C aircraft, and integrate UAIS hardware on the E-2D. It will integrate other enhancing identification technologies complimentary to UAIS into the E-2C and E-2D.

\* Quantity reflects number of Core Open Architecture (5) and High Frequency Internet Protocol (5) test article sets to be procured. For each, 3 sets will be used for laboratory development efforts at both the Contractor and Government sites, 1 set will be installed in the test aircraft, and 1 set will serve as a spare for both laboratory and aircraft use.

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0204152N, E-2 SQUADRONS	PROJECT NUMBER AND NAME 0463, E-2C IMPROVEMENTS
---	--	--

## B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Multi-Source Integration (MSI) Phase II	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.204	.180		
RDT&E Articles Qty				

Developed software applications to facilitate incorporation of new technologies such as Multi-Source Integration (MSI) in existing E-2 Operational Flight Program (OFP). Produced hardware-in-the-loop data sets, performance measures, and data analysis tools in support of MSI Ph II. Fund software architecture analysis and design for incorporation of diverse applications in the E-2 Weapon System, including MSI, Combat ID, and Distributed Weapons Coordination. Fund all-source data fusion in the E-2 including radar, Identification Friend or Foe (IFF), Electronic Surveillance (ES), Link 16, Link 11, and Cooperative Engagement Capability (CEC). Fund requirements analysis for development of integrated communication system architecture to support advanced sensor networking. Fund Fleet Battle Group interoperability testing and evaluation for the E-2.

Single Integrated Air Picture (SIAP) Block 0	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.235	.400		
RDT&E Articles Qty				

Successfully completed Preliminary Design Review/Critical Design Review and coding of Single Integrated Air Picture (SIAP) Block 0 software for implementation and fielding in Systems Configuration Set (SCS) 5. Outyear funding will support testing and fielding of SIAP Block 0 software.

Airborne Battlefield Command and Control (ABC 2)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.929	.954	4.850	6.842
RDT&E Articles Qty				

Conducted demonstrations of High Frequency Secure Internet Protocol (IP) Router Network (HF SIPRNET) capability, VRC-99 IP networking, and Tactical Targeting Networking Technology (TTNT) communications network and waveforms. Participated in DARPA TTNT, Trident Warrior and Joint Task Force Exercise (JEFX) experimentation events. Funding will be used to conduct development and demonstrations of E-2 airborne Joint Sensor Netting (including Network Centric Collaborative Targeting (NCCT)), IP networking concepts (including Advanced Digital Networking Systems, Tactical Information Services, and IP enabled communications systems), machine-to-machine interface, open architected computing environment, network applications, tactical decision aids, combat identification technologies, on-board and off-board data fusion capabilities, and airborne demonstration of advanced mission computer and communications technologies.

In Flight Refueling (IFR)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost				8.952
RDT&E Articles Qty				

Funding provides for the system development and testing to support the incorporation of In Flight Refueling (IFR) technology into the E-2 aircraft. Emphasis during system development will be on design drawing updates, fuel system design, human systems integration and design, including interior/lighting modifications and seat replacement. Flight testing is required to evaluate field of view, aerodynamic performance, loads, and handling qualities.

Universal Automatic Information System (UAIS)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost				4.199
RDT&E Articles Qty				

Funding will integrate Universal Automatic Information System (UAIS) into the E-2C and E-2D mission computer and provide for a means to transfer Automatic Information System (AIS) data from the aircraft inflight to the warships. The integration will include non-recurring engineering, logistics and test and evaluation to integrate UAIS control features and output into the E-2C and E-2D weapons system and to standardize and document the UAIS hardware already installed on E-2C aircraft, and integrate UAIS hardware on the E-2D. It will integrate other enhancing identification technologies complimentary to UAIS into the E-2C and E-2D.

E-2 Core Open Architecture (OA)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost			11.947	25.976
RDT&E Articles Qty			*5	

Funding supports the development, integration and test of an open architected distributed computing environment and Internet Protocol networking infrastructure, which includes airborne Advanced Digital Networking System and Tactical Information Services.

\* Quantity reflects number of Core OA test article sets to be procured. 3 sets will be used for laboratory development efforts at both the Contractor and Government sites. 1 set will be installed in the test aircraft, and 1 set will serve as a spare for both laboratory and aircraft use.

E-2 High Frequency (HF) Internet Protocol (IP)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost			5.894	8.542
RDT&E Articles Qty			*5	

Funds the development, integration and test of High Frequency (HF) radio and Mission Computer hardware and software modifications and additions to provide an E-2 HF digital data communications path, allowing for E-2 connectivity with other HF Internet Protocol (IP) users.

\* Quantity reflects number of HF IP test article sets to be procured. 3 sets will be used for laboratory development efforts at both the Contractor and Government sites. 1 set will be installed in the test aircraft, and 1 set will serve as a spare for both laboratory and aircraft use.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Congressional Adds

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

9418 - E-2C Open Architecture Computing Framework	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	2.017	1.295		
RDT&E Articles Qty				

Supported development and test of a Model Driven Architecture for E-2 Hawkeye mission computer software. This included modeling modular software components using the Unified Modeling Language, and interfacing elements using data distribution middleware. Support development and testing of a Model Driven Architecture for the E-2 Advanced Control Indicator Set software. This will include modeling the applications using the Unified Modeling Language with initial emphasis on associated interfaces.

9419 - Non-Cooperative Combat Identification Capability	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.251			
RDT&E Articles Qty				

Supported concept development, system engineering, and system prototyping for an advanced non-cooperative identification system capability. Provided for the installation of a prototype Non-Cooperative Combat Identification system for system evaluation and live testing with targets of opportunity in the vicinity.

9420 - Makaha Ridge FORCENet Lab	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.274	3.188		
RDT&E Articles Qty				

Supported science and technology and advanced technology demonstration initiatives for potential transition to the E-2 program. Conduct research and development efforts at the Makaha Ridge FORCENet Laboratory, which will serve as a Battle Management Command and Control test center to develop capabilities for FORCENet oriented technologies and systems. Integrate a Cooperative Engagement Capability (CEC) into the FORCENet lab and enable participation in a CEC network with live assets.

February 2007

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0204152N, E-2 SQUADRONS	PROJECT NUMBER AND NAME 9999, Congressional Adds
---	--	---

9616 - Magneto Rheological Side Lateral Engine Mount	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.966			
RDT&E Articles Qty				

Funded research, development and tested an airworthy Magneto Rheological (MR) shock mount for the E-2C aircraft. Continued development, test and qualification for an airworthy MR Shock mount for E-2C aircraft, to reduce vibration loads into the airframe resulting in higher reliability for E-2C mission systems.

9744 - Airborne Advanced Network	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	2.503	2.192		
RDT&E Articles Qty				

Developed air-to-air kill chain networking techniques and applications to improve interoperability and level of service. Developed techniques and applications to improve information sharing in a networked environment between tactical airborne platforms. Demonstrate the Internet Protocol network waveform Tactical Targeting Network Technology (TTNT). Provide insight into the network architecture of TTNT and a realistic software and radio frequency environment that will encable a Single Integrated Air Picture. Provide a means to measure and compare performance against legacy Tactical Digital Information Links and validate the requirements for the Joint Tactical Radio System waveform.

9745 - Global Information Grid Middleware Portal	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.961			
RDT&E Articles Qty				

Developed a services oriented Architecture and provided Network Centric Enterprise Services. Architecture contained services through which applications can be added or developed to exchange information via the Global Information Grid.

9746 - Pacific Missile Range Facility/Pearl Harbor	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.273			
RDT&E Articles Qty				

Funded Cooperative Engagement Capability (CEC) like capability for Makaha Ridge to connect to Pearl Harbor CEC activities. Tested and evaluated a distributed command and control networking environment with assets and facilities that existed in the Pacific Missile Range Facility/Pearl Harbor areas, including the Makaha Ridge FORCENet Laboratory.

<p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>The Communications Automation Program - This project is a continuing program that provides for automation and communications upgrades for Fleet tactical users. It includes Tactical Messaging (formerly Naval Modular Automated Communications System/Single Messaging Solution II (NAVMACS/SMSII), Joint Network Management System (JNMS), Automated Digital Network System (ADNS), Naval Global Directory Services, and Tactical Switching Ashore [formerly Shore Infrastructure Modernization (SIM)].</p> <p>ADNS is the method by which tactical Navy units (Surface, Subsurface, and Air Deployed Assets) transfer Internet Protocol (IP) data to Navy and Department of Defense (DoD) communities on the Global Information Grid (GIG). ADNS serves as a "Gateway" to enable Joint and Coalition interoperability for these Tactical assets and ensures GIG connectivity. Utilization of ADNS allows Unclassified, Secret, Top Secret, and various Joint, Allied, and Coalition services to interconnect to the Defense Information Systems Network (DISN) ashore via multiple Radio Frequency (RF) paths and pier connectivity.</p> <p>Tactical Messaging (formerly NAVMACS/SMSII) developed joint/combined individual and organizational message handling for United States Naval ships and submarines, United States Marine Corp (USMC) vans, and selected Military Sealift Command (MSC) and United States Coast Guard (USCG) platforms. Tactical Messaging (NAVMACS II/SMS) develops fleet interfaces to the Defense Message System (DMS) and legacy ashore messaging systems. DMS Proxy will develop the interface with Integrated Shipboard Networks System (ISNS) to allow removal of DMS Components from all ships.</p> <p>Naval Global Directory Service (NGDS): The NGDS will develop a directory services architecture providing enhancements and efficiencies for security, application accessibility, and Naval Identity Management (IdM) that span Naval enterprise-wide operations across the Navy Marine Corps Intranet (NMCI), OCONUS Navy Enterprise Network (ONE-NET), Marine Corps Enterprise Network (MCEN) and Naval Afloat Networks/(Information Technology (IT)-21 network domains. The projected NGDS capabilities include: Authentication to enterprise applications; Support for an enterprise Single Sign On (SSO) solution; Backbone for federating (sharing) identity data amongst the Naval Domains, afloat environments, and external sources; Storage for Public Key Infrastructure (PKI) material and other credentials; Basic "Locator" services.</p> <p>The NGDS builds upon the initial research, development and deployment of the Navy Marine Corps White Pages, in addition to other requirements such as the Navy Marine Corps Intranet's (NMCI) directory service, Navy Marine Corps Portal (NMCP) directory service and Single Sign On (SSO) initiatives, and the IT-21 Windows 2000 shipboard integrated directory service. The projected NGDS capabilities include: Authentication to enterprise applications; Support for an enterprise SSO solution; Domain Naming Service (DNS) for a Naval Enterprise network De-Militarized Zone (DMZ); Backbone for federating (sharing) identity data amongst the Naval Domains, afloat environments, and external sources; Storage for Public Key Infrastructure (PKI) material and other credentials; Basic "Locator" services; Additional advanced directory or identity based functions.</p> <p>NGDS delivers an integrated directory service infrastructure across the Naval enterprise both ashore and afloat by building trusted relationships between people, applications, services, and other resources throughout the network. Once established, NGDS must manage and maintain these relationships regardless of the user's or services location.</p>								

**CLASSIFICATION:**

APPROPRIATION/BUDGET ACTIVITY	R-1 ITEM NOMENCLATURE	
<b>RESEARCH DEVELOPMENT TEST &amp; EVALUATION, NAVY /</b>	<b>BA-7</b>	PE: 0204163N TITLE: FLEET TACTICAL DEVELOPMENT
<p>Automated Digital Network System (ADNS): provides routing, switching, baseband, configuration and monitoring capabilities for interconnecting Naval, Coalition and Joint enclaves worldwide. ADNS utilizes Commercial Off the Shelf/ Government Off the Shelf (COTS/GOTS) equipment and network protocols as specified by the Joint Technical Architecture. ADNS Increment I provides initial limited, Ship to Shore Internet Protocol (IP) connectivity, separation of enclaves, reuse of unused enclave bandwidth, and Ship to Shore Tactical IP connectivity. ADNS Increment II provides additional capabilities of load balancing, Radio Frequency (RF) restoral, Initial Quality of Service (QoS) to include application prioritization, Initial Traffic Management, and enhancements designed to maximize use of "effective" available bandwidth for surface, shore, and airborne platforms. ADNS Increment III will converge all Navy Tactical Voice, Video, and Data requirements into a converged IP Data stream. In addition, the Increment III architecture will incorporate an IPv4/IPv6 dual stack and a ciphertext security architecture to align to the GIG in order to mesh Navy tactical surface, subsurface, and airborne platforms into a single IP environment with Gateway functions to Joint and Coalition Networks. ADNS Increment III will serve as the Navy tactical interface (Gateway) for IP Networking with Transformational Satellite (TSAT), Joint Tactical Radio System (JTRS), High Assurance Internet Protocol Encryptor (HAiPE), Advanced Extremely High Frequency (AEHF), and other Future Department of Defense (DoD) Transformational Command, Control, Communications, Computers , &amp; Intelligence (C4I) Programs.</p> <p>The Tactical Switching Ashore (TSw) Infrastructure Modernization (SIM) program rebuilds 1970s based shore high frequency based infrastructure to current and future scalable technical standards in order to provide a commercially standardized, technically compliant, and robust network. TSw will migrate the shore sites and their terrestrial interconnections into a coherent, scalable, network-centric capability. While leveraging off recent shore upgrades for the major shore communication regions, TSw will incorporate a system integrator approach to develop, design, and implement a plan to remove bandwidth limitations, create redundant communications paths, provide secure and available communications, provide dynamic bandwidth management, and reduce costly dependencies on legacy systems. This plan will be designed to increase efficiencies, and reduce manpower and the overall footprint of the Navy's shore sites. TSw will bring new technologies and capabilities that converge legacy, circuit-based, communications to a standard, integrated, and interoperable IP network. This enabling system, of which United States Navy enterprise network (FORCENet) is a part, supports the four pillars of Sea Power 21 by providing the infrastructure required to support collaborative decision-making, faster decision cycles, and shared superior situational awareness required to fight the War on Terrorism.</p> <p>The Shore to Ship Communications System develops communications systems elements which provide positive command and control of deployed Ship, Submersible, Ballistic, Nuclear (Submarines (SSBNs), Ship, Submersible, Guided Nuclear (Submarines (SSGNs) and attack Ship, Submersible Nuclear (Submarines (SSNs). Provides the communication elements for continuous assessment of the command and control link between Secretary of Defense and missile platforms. Provides the joint system design for Emergency Action Message (EAM) distribution to all nuclear platforms. Provides the tools for strategic command and control planning to deployed SSBNs including shore infrastructure.</p> <p>Low Band Universal Communications System (LBUCS) will provide operational capability, through the Very Low Frequency architecture, to insure system life extension and flexibility of Submarine Broadcast traffic to the submarine in stealth posture. The flexibility includes bandwidth efficiency, ensuring more operational products are delivered to a submarine without risking mast exposure.</p> <p>The shore Submarine Operating Authority (SUBOPAETH) was downsized from six to four nodes. In order to ensure Continuity of Operations (COOP) and ongoing robustness in a reduced architecture, the Submarine Operating Authority (SUBOPAETH) architecture provides for increased commonality among SUBOPAETHs. This ensures robust operation, improved integration between Submarine Operational Control and support communications, and Continuity of Operations in the event of a SUBOPAETH casualty.</p> <p>The Joint Integrated System Technology for Advanced Networking Systems (JIST-NET) project is an ongoing effort to integrate, develop, and support Military SATCOM multi-spectrum communications planning, management, and control capabilities that interface with many mono-spectral planning and management tools and with advanced planning tools. This project has extremely high visibility within the DoD and United States Congress.</p> <p>Congressional plus-up to support development of a Floating Area Network (FAN) plan and architecture enabling a direct Line of Sight (LOS), wireless, Transmission Control Protocol/Internet Protocol (TCP/IP) network among intra-battle group ships.</p> <p>Congressional plus-up to support development of a portable Cole emergency radio system (MRC-105 Emergency Radio).</p>

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

This project is a continuing program that provides for automation and communications upgrades for Fleet tactical users. Tactical Messaging, formerly The Naval Modular Automated Communications System II (NAVMACS II/Single Messaging Solution (SMS)) is the network centric Internet Protocol (IP) solution for the processing, storage, distribution and forwarding of General Service Defense Message System (DMS) organizational messages to the user's desktop throughout the Integrated Shipboard Networks System (ISNS). Automated Digital Network System (ADNS) provides routing, switching, baseband, configuration and monitoring capabilities for interconnecting Naval, Coalition and Joint enclaves worldwide. ADNS utilizes Commercial Off the Shelf/ Government Off the Shelf (COTS/GOTS) equipment and network protocols as specified by the Joint Technical Architecture. ADNS Increment I provides initial limited, Ship to Shore Internet Protocol (IP) connectivity, separation of enclaves, reuse of unused enclave bandwidth, and Ship to tactical Shore IP connectivity. ADNS Increment II provides additional capabilities of Load Balancing, Radio Frequency (RF) restoral, Initial Quality of Service (QoS) to include application prioritization, Initial Traffic Management, and enhancements designed to maximize use of "effective" available bandwidth for surface, shore, and airborne platforms. ADNS Increment III will converge all Navy Tactical Voice, Video, and Data requirements into a converged IP Data stream. In addition, the Increment III architecture will incorporate an IPv4/IPv6 dual stack and a ciphertext security architecture to align to the Global Information Grid (GIG) in order to mesh Navy tactical surface, subsurface, and airborne platforms into a single IP environment with Gateway functions to Joint and Coalition Networks. ADNS Increment III will serve as the Navy Tactical Interface (Gateway) for IP Networking with Transformational Satellite (TSAT), Joint Tactical Radio System (JTRS), High Assurance Internet Protocol Encryptor (HAIPE), Advanced Extremely High Frequency (AEHF), and other Future DoD transformational C4I Programs. Global Directory Service (NGDS): Naval Global Directory Services is a key component of the infrastructure that will be leveraged to support a variety of network operations. The NGDS will develop a directory services architecture providing enhancements and efficiencies for security, application accessibility, and naval Identity Management (IdM) that span Naval enterprise-wide operations across the Navy Marine Corps Intranet (NMCI), OCONUS Navy Enterprise Network (ONE-NET), Marine Corps Enterprise Network (MCEN) and Naval Afloat Networks/IT-21 network domains. The NGDS builds upon the initial research, development and deployment of the Navy Marine Corps White Pages, in addition to other requirements such as the Navy Marine Corps Intranet's (NMCI) directory service, Navy Marine Corps Enterprise Services (NMES) directory service and Single Sign On (SSO) initiatives, and the IT-21 Windows 2000 shipboard integrated directory service. NGDS delivers an integrated directory service infrastructure across the Naval enterprise both ashore and afloat by building trusted relationships between people, applications, services, and other resources throughout the network. Once established, NGDS will manage and maintain these relationships regardless of the user's or services' location. Tactical Switching Ashore will support the migration of the shore sites and their terrestrial interconnections into a coherent, scalable, network capability.

**(U) B. Accomplishments/Planned Program**

	FY06	FY 07	FY 08	FY 09
Automated Digital Network System (ADNS)	5.835	5.025	3.879	3.665
RDT&E Articles Quantity		4		

**FY06:** Completed interoperability and operational testing for ADNS Increment (INC) II. Developed advanced traffic management, control and Quality of Service (QoS) capabilities. Demonstrated dynamic routing scheme. Continued support of FORCENet demonstrations (Trident Warrior series). Awarded contract for system development and demonstration for INC III. INC III will provide converged voice, video, and data; increased bandwidth capacity upgrades to allow transfer at 25 and 50 Mega Bits per Second (Mbps); conversion to a Ciphertext Security Backbone using Internet Protocol version 6 (IPv6) capability, and the ability to converge all Surface Units into a Meshed contiguous Internet Protocol (IP) environment.

**FY07:** Conduct Increment IIa formal Developmental and Operational Testing (DT/OT). Continue Incrementally funding INC III System Development and Demonstration phase. INC III contractor will conduct system requirements review and deliver an ADNS Increment III system and subsystem specification. Evaluate industry produced INC III Engineering Demonstration Models (EDMs). Conduct system Preliminary and Critical Design Review ((PDR) and (CDR)).

**FY08:** Continue the system development and demonstration phase of ADNS Increment III with required interfaces. Conduct Increment III formal Developmental Testing (DT). Develop acquisition documents, specifications, and capability requirements for INC III and future increments, as necessary to deliver technology, networks, and throughput capabilities defined in the ADNS Capability Development Document (CDD) for all navy Tactical Units (Surface, Subsurface, Airborne, and Shore.)

**FY09:** Complete formal Operational Testing of Increment III. Develop system modification of Increment III for HAIPE integration. Develop and update system and subsystem interface designs for integration with new SATCOM and Radio Frequency (RF) paths, as they emerge.

	FY06	FY 07	FY 08	FY 09
Tactical Messaging (NAVMACS)	1.066	-	1.370	1.315
RDT&E Articles Quantity				

**FY06:** Continued development and test efforts for emerging technology and product upgrades. Initiated development of way-ahead messaging for unit level platforms to include Defense Messaging System/Integrated Shipboard Network System (DMS/ISNS) to allow shipboard messaging consumers to communicate with shore based Defense Message System (SMS) Infrastructure.

**FY07:** Planning and testing for DISA developed Proxy product will occur in FY08 and FY09.

**FY08:** Initiate development of way-ahead messaging for unit level platforms to include DMS Proxy Solution to allow shipboard IP messaging consumers to communicate with shore based Automated Message Handling Systems (AMHS). Develop and test efforts for emerging technology and product upgrades.

**FY09:** Continue development and test efforts for emerging technology to transition Tactical Messaging into a Service Oriented Architecture to align with DoD Organizational Messaging (OM) of the future.

Naval Global Directory Services	0.383	0.332	0.340	0.313
RDT&E Articles Quantity				

**FY06:** Continued the development of the Naval Global Directory Service (NGDS) - enterprise wide, integrated directory service architecture. Assisted in the continuing convergence of NMCI, ONE-NET, MCEN and IT-21 environments. Provided developmental engineering support for establishment of the Naval Network Identity (NNI) Registry Service to be used to register/issue unique identifiers to all Naval users. Supported Navy directory testing efforts.

**FY07:** Continue the development of the Naval Global Directory Service (NGDS) - enterprise wide, integrated directory service architecture. Assist in the continuing convergence of NMCI, ONE-NET, MCEN and IT-21 environments. Provide developmental engineering support for shore-based identity data sharing/synchronization. Support Navy directed testing efforts.

**FY08:** Continue the development of the Naval Global Directory Service (NGDS) - enterprise wide, integrated directory service architecture. Assist in the continuing convergence of NMCI, ONE-NET, MCEN and IT-21 environments. Provide developmental engineering support for establishment of the Naval Network Identity (NNI) Registry Service to be used to register/issue unique identifiers to all Naval users. Support Navy directory testing efforts.

**FY09:** Continue the development of the Naval Global Directory Service (NGDS) - enterprise wide, integrated directory service architecture. Assist in the continuing convergence of NMCI, ONE-NET, MCEN and IT-21 environments. Provide developmental engineering support for ship-to-shore identity data sharing/synchronization, and continue integration of shore authoritative identity sources

	FY06	FY 07	FY 08	FY 09
Tactical Switching (Ashore)	7.462	9.896	4.155	3.896

**FY06:** Initiated Increment II Spiral A Network Management and Control System (NMS) (Management Capability). Developed a Request for Procurement (RFP) for global integration to develop Commander Critical Information Requirements (CCIRs), Information Exchange Requirements (IERS) and Reporting constructs supporting the NMS deployment. Additionally, selected a system integrator to develop a shore communications architecture that will automate, remote or consolidate communications technical control facilities to the extent possible supporting migration of all services to an all IP infrastructure. Identified and integrated interfaces supporting DoD Teleport and the Defense Information Systems Network (DISN) CORE. The requirement for this architecture is to provide a seamless connection between the shore tactical support infrastructure and the deployed user. In addition, the program built upon the current Commercial Off-The-Shelf (COTS) NMS capability (situational awareness / monitoring) to develop management and control capabilities.

**FY07:** Complete the development of Increment II Spiral A Network Management and Control System (NMS) (Management Capability) that began in FY06. Complete the system integrators task to develop a shore communications architecture that will Automate, Remote or Consolidate communications technical control facilities to the extent possible supporting migration of all services to an all IP infrastructure. Initiate development of Increment II Spiral B NMS (automation capability).

**FY08:** Complete the Increment II Spiral B development that began in FY07. Develop and design a plan to eliminate bandwidth limitations within the architecture by designing redundant communications paths either physical or virtual, providing real time integrated security, enabling dynamic bandwidth management, and reducing costly dependencies on legacy systems. In addition, the program will expand the monitoring, management, and control capability developed in FY06/FY07 to fully automate the NMS capability. This new capability requires less manual intervention and will serve as the backbone technology to reduce the Navy communication facilities infrastructure from 4 Fleet Network Operation Centers (NOCs) to 2 Regional Network Operations and Security Centers (RNOSC). Efforts outlined in Increment II Spiral A and B provide the foundation for reducing the manpower and facilities which will enable substantial FYDP savings.

**FY09:** Initiate Increment III NMS (GIG/Joint/All IP Integration Capability). Complete the design, development and implementation of the upgrades to the tactical switching Enterprise NMS (ENMS) and NOC systems to allow for full integration with the Joint Community on the All IP GIG. Develop the design and implementation plan to eliminate the remaining legacy and Navy unique networking elements that remain in the tactical switching architecture. This will allow for full All IP interoperability and integration between Navy forces and the forces of other branches of the service in the Joint battlespace to allow for full Network Centric Warfare. Provide for full direct access for Navy warfighters through the Navy RNOSCs to the All IP GIG for full warfighting application data exchange. Provide the mechanism for dynamically and automatically managed real time integrated Information Assurance and security. Provide for Quality of Service (QoS) enabled traffic flow prioritization and full automated dynamic bandwidth management. This new capability will require only a minimal amount of manual intervention and will provide for full integration between the Navy and Joint operational enclaves over UNCLAS, Secret, SCI and multiple CENTRIXS network enclaves.

**(U) E. ACQUISITION STRATEGY: \***

**ADNS:** Evolutionary acquisition approach with overlapping development and implementation phases for defined Increment I, II, and III system baselines, as well as future increments as necessary to deliver capabilities to Fleet Tactical Units. Increments I and II will use existing competitively awarded contracts; however, Increment III will be based on a new Contracting Strategy to include the use of innovative contract types that implement changes consistent with acquisition streamlining initiatives. Aggressively leverage COTS products while capitalizing on acquisition reform initiatives to achieve material savings in the logistics, installation, integration and training areas. Where feasible, differing types of advantageous contract vehicles will be used to provide flexibility, decreased contract administrative costs, and encourage acquisition streamlining through the use of COTS products. The contract strategy and initiatives used for Increment III will form the foundation for future follow-on Increments deemed necessary to deliver capabilities to the Fleet.

**Tactical Messaging (formerly NAVMACS):** The Tactical Messaging acquisition approach has evolved according to key technology advances, resulting incremental developmental phases, and the principals of acquisition reform. While initial production units were acquired through competitively awarded vehicles, future contracting will also embrace acquisition streamlining initiatives in addition to maintaining the benefits of competitive, best value contracting.

**NGDS:** Evolutionary acquisition approach with overlapping development and implementation phases to mitigate technical and financial risks. Integrate rapidly evolving technologies as deemed feasible and acceptable based on security and operational risks. Leverage COTS products and existing Navy/GSA contracts for small-scale implementation if NGDS hardware and software.

**Tactical Switching Ashore** Evolutionary acquisition approach uses Spiral Development and implementation. Existing contract vehicles are used during Increment I implementation of procurement upgrades to existing shore legal equipment at the major communication centers (NCTAMS PAC, NCTAMS LANT, NCTAMS EURCENT, NCTS Bahrain, and NCTS San Diego) and to include 40+ shore communication facilities (COMSTATIONS, NOCs, Mini-NOC and STEP sites). Increment I upgrades serve as an enabler to Increment II and III activities. Based upon the future shore communication architecture as defined by the Navy, Increment II transitions the Navy's 3 NCTAMS and two major NCT Shore infrastructure to a 2 regional network operations and security center (RNOSC) and 1 global network operations and security center (GNOSC) concept to achieve a Joint/DoD Net-Centric environment. Increment II will be organized into two Spirals. Each spiral will build upon the previous capability and serve as risk mitigation for the succeeding effort. Increment III will introduce new capability that will allow integration with the joint community on the All Internet Protocol (IP) Global Information Grid (GIG). This strategy provides flexibility in a rapidly evolving technology environment and allows earlier implementation of developmental technology as it becomes available.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>This project develops communication system elements which provide positive command and control of deployed Ship, Submersible, Ballistic, Nuclear (SSBNs) and fleet submarine broadcast connectivity to Ship, Submersible, Nuclear (SSNs), Ship, Submersible, Guided Missile (SSGNs) and SSBNs. This project provides enhancements to the shore-to-ship transmitting systems and provides submarine capabilities to the Broadcast Control Authority (BCA) consistent with the Network Operation Center (NOC) architecture. The BCA provides the oversight and control for all fixed submarine broadcasts. Effective utilization of this communications system's performance is provided via the Strategic Communications Assessment Program (SCAP). The Continued Evaluation Program (CEP) provides constant assessment of the effectiveness of the end-to-end network. The Submarine Operating Authority (SUBOPAETH) includes both Submarine Communications and Operational Control (OPCON) at shore sites. A SUBOPAETH architecture provides for back-up capability among the four Broadcast Control Authority/ Operational Control (BCA/OPCONs) to ensure Continuity of Operations (COOP) in the event of a BCA outage. The Common Submarine Radio Room (CSRR) integrates Commercial Off The Shelf (COTS) and Government Off The Shelf (GOTS) components into a single radio room configuration for all classes of submarines. The CSRR design is based on the Virginia class radio room and is adapted for each platform's hull shape and mission needs. Technologies to improve high voltage insulators, helix house bushings and antenna components used in the Fixed Very Low Frequency VLF (FVLF) transmit systems are evaluated and tested through the High Voltage Improvement Program (HVIP). The Nuclear Command, Control and Communications Long Term Solution (NC3 LTS) will provide a communications approach in support of the Joint Operational Architecture (JOA) for time-critical Emergency Action Messages (EAMs) to be disseminated across Areas of Responsibility (AOR's) in support of Joint operations. This project implements the Joint Staff EAM Board of Directors (BoD) direction for a viable long-term EAM dissemination solution (NC3 LTS) and that near term enhancements enable the interim hybrid solution to have an infrastructure to allow life sustainment until a replacement system comes on-line. Low Band Universal Communications System (LBUCS) provides operational capability, through the Very Low Frequency architecture, to insure system life extension and flexibility of Submarine Broadcast traffic to the submarine in stealth posture. The flexibility includes enhanced throughput, ensuring more operational products are delivered to a submarine without risking mast exposure. The Submarine Enhanced Emergency Alert System (SEEAS) replaces the Army-Navy/BST-1 (AN/BST-1) transmitter buoy used to communicate "in extremis" messages to the Fleet Commander from an SSBN on patrol that had been rendered incapable of performing its mission either by hostile action or by a casualty.</p>

<b>(U) D. ACQUISITION STRATEGY: *</b>																											
<p><b>The Common Submarine Radio Room (CSRR)</b> will integrate Chief of Naval Operations (CNO) N6 communication programs into the submarine radio rooms. The program has been designated an ACAT II due to the radio room system level Operational Test requirement and the amount of funding required to execute the program. Each class variant (SSBN, SSGN, Ship, Submersible, Nuclear (SSN)) will require design integration and operational testing. The Common Submarine Radio Room (CSRR) program has completed Milestone C. The procurement of equipment will be accomplished by the established program offices; the integration of the equipment into the submarine environment will be conducted by the NAVSEA Undersea Warfare Center; and the installation will be accomplished by Space and Naval Warfare (SPAWAR) System Center, Charleston.</p> <p><b>Low Band Universal Communication System (LBUCS)</b> will maximize the use of Commercial Off The Shelf (COTS) and Non-Developmental Items (NDI) hardware and software. Contract award will be based on full and open competition.</p> <p><b>The Nuclear Command, Control and Communications Long Term Solution (NC3 LTS)</b> will develop an approach to use Commercial Off-The-Shelf (COTS) and Non-Developmental Item (NDI) components to extend operational life of the existing system and to establish a long term solution compatible with future Global Information Grid structures. The program plans Milestone (MS)-B in 4th QTR FY08.</p> <p><b>Submarine Enhanced Emergency Alert System (SEEAS)</b> is a project leveraging off technology developed from other programs and maximizes the use of COTS and NDI.</p>

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Tomahawk Weapons System (TWS) provides the Tomahawk cruise missile attack capability against targets on land (Tomahawk Land Attack Missile (TLAM)). The TLAM can be fitted with either Conventional unitary warhead (TLAM/C), nuclear warhead (TLAM/N) or submunition dispenser (TLAM/D). This program ensures that the TWS exploits state-of-the-art technology to preserve the efficiency of this proven weapon system, and includes all missile development, mission planning system development, and submarine and surface ship weapons control system development.

The Tactical Tomahawk (TACTOM) All-Up-Round Block IV missile development is a comprehensive spiral baseline upgrade to the TWS that provides the tactical commander a quick reaction response capability as well as improved flexibility, increased accuracy, and higher lethality. A five-year multi-year (FY04-FY08) production contract was awarded in August 2004 for the production of up to 2200 Block IV Tomahawk missiles. The essential upgrades of the Block IV missile are: improved guidance, navigation, control and mission computer; two-way satellite communications; and a significantly lower production cost as compared to the Block III missile. Block IV provides a UHF SATCOM data link to enable the missile to receive in-flight mission modification messages, to transfer health and status messages, and to broadcast Battle Damage Indication (BDI) messages. Block IV also includes a high anti-jam GPS receiver, navigation improvements and associated antenna systems. The Tomahawk program (A0545) also includes development of Torpedo Tube Launch (TTL) capability for submarines and the continuing advances identified as spiral development under the Tomahawk Baseline IV Operation Requirements Document (ORD), to include development of the Joint Chiefs of Staff (JCS)-Directed incorporation of Selective Availability Anti-Spoofing Module (SAASM) capability by FY 09.

The Tomahawk Command and Control System (TC2S) Theater Mission Planning Center (TMPC) and Afloat Planning System (APS) (a shipboard version of TMPC) provide mission planning and employment support information for both the nuclear (TMPC only) and conventional TLAM, including the distribution of mission data and command information essential to TLAM employment via the Mission Distribution System (MDS) and associated communications infrastructure. Development of Tactical Tomahawk capabilities in TMPC/APS/MDS includes software development, integration, test, and delivery, including support for TECHEVAL and OPEVAL, training development, installation planning, and simulation/model development required by COMOPTEVFOR to offset live missile flights in TECHEVAL and OPEVAL. This project also includes development related to national and tactical imagery architectures, as well as software development to decrease mission-planning time and increase the quality and accuracy of each mission for Block III and IV TLAM.

The Tomahawk Weapons Control System provides launch capability for surface and submarine platforms. Development of the Tactical Tomahawk Weapons Control System (TTWCS) provides a common architecture to launch the Tactical Tomahawk Block IV and all variants in inventory. Development of the Tactical Tomahawk Weapons Control System (TTWCS) requirements to meet the Joint Technical Architecture (JTA) version 6 requirements to meet FORCE Net compliance and be Internet Protocol Version 6 (IPv6) ready is essential for continued interoperability within the Joint Service Architecture. These efforts provide battle-group tactical flexibility and responsiveness while maximizing TWS wartime capability. TTWCS entered Engineering and Manufacturing Development (EMD) in FY 99, with Phase A IOC (BLK III) in DEC 2003, and Phase B IOC (TACTOM) in June 2004.

Miscellaneous Adjustments	<u>-0.235</u>		<u>-2.636</u>	<u>-0.156</u>
Subtotal	-0.933	5.509	-2.570	0.009

Schedule:

TTL DT/OT - Due to the four TTL flight test failures, the TTL program has experienced a delay and IOC slipped from 2Q FY08 to 3Q FY08. There are significant tasks that are required such as the failure investigation and additional testing that need to occur.

TT SAASM Integration - is extended through FY 09.

SAASM IOC - slipped from 3Q FY09 to 3Q FY10 - as SAASM integration activities shifted one-year, so will the target date of SAASM IOC.

TTWCS V5 OT and OTRR slipped from 3Q-4Q FY 06 to 1Q-2Q, FY07 - unanticipated delays in completion of DT/OT III dry-run testing delayed the start of TTWCS V5 OTRR. Launch platform availability for flight test surface validation of V5 did occur in 1Q FY07.

Technical: Not Applicable

Accomplishments / Effort / Sub-total Cost	11.427	12.397	6.405	7.918
RDT&E Articles Qty				

Complete development of the Tactical Tomahawk Torpedo-Tube Launch (TT-TTL) capability. Completing TTL software and hardware qualification testing, DT/OT flight tests and IOC. Continue hardware and software trade studies for Phase 2 ORD requirements to include Selective Availability Anti-Spoofing Module (SAASM) capability into the GPS, Precision Terrain Aided Navigation (PTAN) capability.

Completed demonstration prototype of Precision Terrain Aided Navigation (PTAN) capability to demonstrate real-time operation. Initiated PTAN advance technology risk reduction efforts to develop next generation PTAN prototypes and to integrate PTAN capability into the missile simulation labs. Completed real-time processing capability for PTAN scenes.

Continue integration and development of a precision Radar Altimeter into the All-Up-Round (AUR).

TACTOM Command and Control	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.863	3.483	2.418	2.695

D. ACQUISITION STRATEGY:

(U) In 1998, the Tomahawk Baseline Improvement Program (TBIP) transitioned to the Tactical Tomahawk (Block IV) program. This program is outlined in the Class Justification and Approval (CJ&A No. AIR-22448) signed by the Under Secretary of the Navy on 29 May 1998. The acquisition strategy was to transition the TBIP to Tactical Tomahawk. The Tactical Tomahawk development program was a cost-sharing contract between the Government and the Contractor to add capability to the missile. A multi-year full-rate production contract was awarded in August 2004 for FY 2004-2008 production. Torpedo Tube Launch (TTL) capability will IOC in FY 2008. TTL missiles will be procured beginning in FY 08 within the current missile production budget as required to meet Fleet load-out requirements. Other spiral development capabilities (PTAN, Warhead Improvement, Anti Surface Warfare (ASUW)) will be introduced after successful qualification and testing.

<p><b>Defense Emergency Response Fund (DERF):</b> Not Applicable</p> <p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>This Program Element (P.E.) comprises seven projects - 0766, 9792, 9793, 9A71, 9A72, and 9A73. Project 0766 provides for Integrated Undersea Surveillance Systems (IUSS) Research and Development Projects under the Maritime Surveillance Systems (MSS) Program Office (PEO LMW PMS 485). IUSS provides the Navy with its' primary means of submarine detection both nuclear and diesel. The program has undergone a major transition from emphasis on maintaining a large dispersed surveillance force keyed to detection and tracking of submarines to a much smaller force that is effective against modern diesel and nuclear submarines in regional/littoral or broad ocean areas of interest. This transition preserves the ability to continue open ocean surveillance. A portion of project 0766 (FSS) is classified, with details available at a higher classification level. Project 9792 (IUSS Common Processor automation) &amp; Project 9793 (Ultra-thin disposable fiberoptic undersea surveillance ) are FY06 Congressional Plus-Ups. Project 9792 supports researching sonar automation for technical insertion into Integrated Common Processor to improve probability of detection performance. Project 9793 supports research and development of a low cost ultra-thin fiber-optic array for potential deployment in the most hazardous environments which may reduce life cycle repair and replacement costs associated with the more expensive TL-29A. Projects 9A71 (High Channel Count Interrogator for Sensor Arrays), 9A72 (Tunable Laser and Laser Array), and 9A73 (Program Increase) are all FY07 Congressional Plus-Ups. Project 9A71 supports development of a universal fiber sensor interrogator required for deploying next generation advanced towed arrays. Project 9A72 supports development of a low cost, non-microphonic, Tunable Laser and Laser Array suitable for driving the interferometric fiber sensor interrogators required for deploying next generation advanced towed arrays. Project 9A73 supports continued expansion of the ISS Common Processor Automation (ICPA) efforts in line tracking, in-buoy processing, bandwidth management, data fusion/view management and alerting, execution and prosecution aids, and operator interfaces for tactical view manipulation and assessments.</p> <p><b>(U) JUSTIFICATION FOR BUDGET ACTIVITY:</b></p> <p>The IUSS Research and Development project (0766) funds SURTASS Passive and SURTASS Low Frequency Active (LFA) developments. SURTASS provides the mobile, tactical arm of the Integrated Undersea Surveillance System, providing long range detection and cueing for tactical weapons platforms against both diesel and nuclear powered submarines. SURTASS LFA provides an active adjunct capability for IUSS passive and tactical sensors to assist in countering the quieter diesel and nuclear threats of the 1990s and beyond. The LFA tasks are directed at detection of slow quiet threats in harsh littoral waters.</p> <p>(U) In order to continue with reductions in life cycle costs and continue with system-wide consolidation, a short-term goal is to develop a common IUSS processor based on NAVSEA'S Acoustic Rapid COTS Insertion (ARCI) program. The IUSS Integrated Common Processor (ICP) will have the capability to process and display data from all fixed and mobile underwater systems. The IUSS ICP will be used for all new system installations and replace the legacy systems as they reach end of life and require upgrading. Additionally, SURTASS is consolidating on the TB-29A Twin-line array, a variant of the Submarine TB-29A Long line array. This will reduce the number of array variants employed by SURTASS from 3 to 1, and will enable development and logistics cost savings by leveraging off the submarine TB-29A program.</p> <p>(U) Future efforts will be focused on upgrading the LFA capability to the ICP baseline, support bi-static processing utilizing the TL-29A, support activation of fixed sensors, develop smaller, lighter weight acoustic sources for augmentation of small SWATH platforms (under the Compact LFA program), and for replacement of aging LFA sources. Together these efforts support an Active Improvement Program within IUSS.</p> <p><b>(U) B. <p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>A. (U) This project includes efforts for both FSS* and SURTASS. The SURTASS project comprises the mobile, tactical arm of the Integrated Undersea Surveillance System, providing long range detection and cueing for tactical weapons platforms against both diesel and nuclear powered submarines. SURTASS also provides the undersea surveillance necessary to support regional conflicts and sea-lane protection. SURTASS has experienced recent passive and active success against diesel submarines operating in shallow water. SURTASS is leveraging existing developments and reducing costs by using Non-Developmental Items and commercial hardware; supporting common Navy Undersea Warfare processing and towed array developments; and increasing operator efficiency through computer aided detection and classification processing. SURTASS development efforts include: LFA improvements, common IUSS processing, twin-line array development and processing, improved detection and classification/passive automation to counter quieter threats; additional signal processing and bi-static active capability; integrated active and passive operations; improved Battle Group support; and improved information processing.</p> <p>(U) LFA provides an active adjunct capability for IUSS passive and tactical sensors to counter the quieter diesel and nuclear threats of the 1990s and beyond. The LFA tasks are directed at detection of slow quiet threats in harsh littoral waters. Improvements include TL-29A/LFA integration enhancements; advanced waveforms for littoral/shallow water operations including Doppler sensitive waveforms; and processing algorithms to reduce clutter and reverberation false alarms in shallow water. The LFA task includes development and testing of a compact LFA transmit source array for SWATH-P ships, and upgrade of LFA processing capability into the IUSS Integrated Common Processing architecture. The Integrated Common Processor (ICP) is a derivative of the NAVSEA Submarine Acoustic Rapid COTS Insertion (ARCI) program, and is being augmented for IUSS requirements. Together, the LFA improvements, TL-29A, and the ICP support the SURTASS Active Improvement Program.</p> <p>(U) Functional improvements are delivered to the Fleet in software "Builds", while hardware improvements are delivered through the "Tech Insertion" (TI) process. Software builds are based upon the Advanced Processor Build (APB) process begun by the NAVSEA Submarine USW program. Each APB will introduce new capabilities into SURTASS systems including improved automation, normalizer techniques, adaptive beam forming, and display enhancements. SURTASS participates in the process by contributing algorithms for consideration, supplying peer group members for review of candidate algorithms, participating in test evolutions, and incorporating improved algorithms into operational systems. The "Tech Insertion" process, modelled after the NAVSEA Submarine USW hardware improvement program, delivers processing technology improvements to platforms on roughly a 4-year cycle. Hardware upgrades for active and passive arrays and communications systems will also be provided during "TI" upgrades, but not on a regular planned development cycle as for the processing upgrades.</p> <p>B. (U) PEO LMW is involved with the development and maintenance of various IUSS systems. These systems include FDS, FDS-C, SDS, SURTASS, and ADS. The near-term goal is development of ICP, which will result in a single IUSS processor baseline, with minor maintenance efforts continuing on fielded systems. The existing system architecture, signal processing, contact management, and reporting requirements will be evaluated as well as the requirements for future systems. The development of the ICP will take advantage of automation advancement, array technology improvements, and IUSS, submarine, and surface USW system commonality. Additionally, a long term goal is to activate all IUSS sensors as part of a coordinated Active Improvement Program.</p> <p>*A portion of project 0766 (FSS) is classified, with details available at a higher classification level.</p>

<b>CONGRESSIONAL PLUS-UPS:</b>			
		FY 07	
9A71N			
High Channel Count Interrogator for Sensor Arrays		1.445	
Funding for development of a universal fiber sensor interrogator that is required for deploying next generation advanced towed arrays in support of multiple Navy undersea surveillance programs.			
		FY07	
9A72N			
Tunable Laser and Laser Array		1.395	
Funding for development of a low cost, non-microphonic, Tunable Laser and Laser Array suitable for driving the interferometric fiber sensor interrogators that are required for deploying next generation advanced towed arrays			
		FY07	
9A73N			
Program Increase		8.169	
Funding increase to continue the expansion of the ISS Common Processor Automation (ICPA) efforts in line tracking, in-buoy processing, bandwidth management, data fusion/view management and alerting, execution and prosecution aids, and operator interfaces for tactical view manipulation and assessments. Emphasis will be placed on the demonstration of these capabilities

<b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b> This Program Element supports multiple amphibious warfare development and technology insertion efforts.								
1980 -SACC-A: The FY06 Supporting Arms Coordination Center - Automation (SACC-A) program automates the SACC aboard LHA & LHD class ships. Currently the process is all manual and voice accomplished, unresponsive to the needs of Marine Forces ashore.								
1980-AADS: The FY06 Amphibious Assault Direction System (AADS, AN/KSQ-1) program researches Network Centric Warfare requirements for Amphibious Assault Command and Control, identifies the projected technological advances and requirements of Fleet systems, and identifies the Next Generation AADS operational requirements and capabilities. Technology integration with Expeditionary Strike Group ships is also included.								
2231- FY06-FY13 TECHNOLOGY TRANSITION: Provides for research efforts on LCAC Future Naval Capabilities (FNC): Current S&T initiatives include the ONR Expeditionary Logistics (EXLOG), LCAC Cargo Gripping Lashings System (Small Business Technology Transfer (STTR) Program), Self Contained Rudder Actuator System (STTR), Advanced structural design for LCAC ramps (SBIR), Personal Transport Module (SBIR), Enhanced Skirt Finger Material (Foreign Comparative Testing(FCT)Program), the Lube Oil Cooler (FCT), and the Composite Shroud (FCT). The Advanced Skirt System being developed in FY 06 through 09 will be incorporated in LCACs beginning in FT10.

<b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p><b>SACC-A:</b> The FY06 Supporting Arms Coordination Center - Automation (SACC-A) program automates the SACC aboard LHA &amp; LHD class ships. Currently the process is all manual and voice accomplished, unresponsive to the needs of Marine Forces ashore. Specifically, SACC-A is developing a Ship to Objective Maneuver (STOM) Fire's Command &amp; Control cell for the Amphibious Large Deck ships. SACC-A provides an integrated, auto capability to conduct Marine Expeditionary Brigade level fire support planning, coordination, and execution of all supporting arms fires, including Naval Surface Fires, Tactical Air and Artillery &amp; Mortars ashore. SACC-A integrates other Command &amp; Control systems aboard the ship and ashore to provide maximum situational awareness and a common operating picture.</p> <p><b>AADS:</b> The FY06 Amphibious Assault Direction System (AADS, AN/KSQ-1) program researches Network Centric Warfare requirements for Amphibious Assault Command and Control, identifies the projected technological advances and requirements of Fleet systems, and identifies the Next Generation AADS operational requirements and capabilities. Technology integration with Expeditionary Strike Group ships is also included.</p>								
<b>B. Accomplishments/Planned Program</b>								
	FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishments/Effort/Subtotal Cost	2.694	0.000	0.000	0.000				
RDT&E Articles Quantity	0.000	0.000	0.000	0.000				
<p><b>SACC-A:</b> System Engineering development for spiral acquisition, including requirements definition and lab-based testing; Acquisition and prototype interface development of AFATDS with other systems and installation and test aboard LHA/LHD; DoD documentation program reviews (e.g. ORD revalidation, APB, TEMP, SEMP, ILSP); Programmatic support (e.g. management, plans, schedule, briefs, travel, studies, etc.); shipboard interface and interoperability testing of spiral development, training, and logistics system development, and system integration and shipboard interface/interoperability testing.</p> <p><b>AADS:</b> System Engineering and software development begin in FY06.</p>

<p><b>SACC-A:</b> The procurement items for SACC-A include Advanced Field Artillery Tactical Data System (AFATDS), Effect Management Tool (EMT), jam boxes, Automated Distribution Network Systems (ADNS), racks, workstations, Large Screen Color Displays (LSCDs), PICT phones, new Theater Tables, communications devices which will be permanent changeouts to the amphibious ships. These need to be in place in order to permit the connection of the automated SACC capabilities. The operations and maintenance efforts are for program, engineering, and technical support, logistics support and technical assists.</p> <p><b>AADS:</b> The procurement items for AADS are related to two subsystems: EPLRS and the ship dependent AN/KSQ-1 hardware configurations. Examples of specific items include RT-1720(c) Enhanced PLRS User Unit (EPUU) digital radios, EPLRS Net Control Station (NCS) workstations and other EPLRS equipment.</p>										
<b>D. ACQUISITION STRATEGY:</b>										
<p>The SACC-A effort is part of a collaboration between N85 and N86 to jointly develop and field a Naval Fire Control System (NFCS) that satisfies the requirements of naval and supported forces. The NFCS is to be an ACAT III program under N86 management. The AADS strategy is to develop a software interface to ensure integrated communications and joint operations for joint forces.</p>

(U) A. MISSION DESCRIPTION AND BUDGET ITEM

JUSTIFICATION: 0604 - The Training Range and Instrumentation Development Systems (TRIDS) program provides development of range systems including a range electronic warfare simulator, advanced weapons training systems, laser training systems, Tactical Aircrew Combat Training System (TACTS), Large Area Tracking Range (LATR), and Training Enabling Architecture (TENA) interoperability, combat training system improvements, and undersea warfare range technology (previously called shallow water range technology).

1427/3093/3093C - The Surface Tactical Team Trainer (STTT) develops Battle Force Tactical Training (BFTT) system capabilities and interfaces to provide realistic combat system coordinated Team, Unit, and collective Strike Group/Force level training events using Distributed Interactive Simulation (DIS) protocols. The Total Ship Training System (TSTS) is a Pre-Planned Program Improvement (P3) to the BFTT system that facilitates evolving combat system interfaces, implements High Level Architecture (HLA) and common modeling for future interoperability and integrates advanced technology and open design required for future combat systems. TSTS supports the future readiness elements of Sea Power 21 addressed in the Naval Transformation Roadmap dated October 2002. FY06 Congressional Add provided to analyze requirements, design, develop, and deliver functional Training Management System prototypes with related documentation for elements of TSTS.

2124 - The Air Warfare Training Development (AWTD) program provides technology development for aviation training systems, including mission rehearsal simulation technologies and the Aviation Training Technology Integration Facility (ATTIF).

3093 - The Tactical Combat Training System (TCTS) will provide the Navy a replacement for the TACTS and LATR systems. TCTS will also provide fleet deployable instrumentation for at sea training and tactics development. By providing a rangeless capability, the system will greatly increase the area where live instrumented training can be conducted. Initial fielding of a Non-Developmental Item (NDI) Pod system at NAS Key West is complete. The program incorporates evolutionary development (incremental) towards a system capable of supporting a broad spectrum of naval platforms through weapons simulations, participant weapons system stimulation, open architecture, and a high capacity/long range secure datalink.

B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009
Previous President's Budget:	43.615	17.857	21.874	20.425
Current BES:	45.875	19.085	6.987	19.971
Total Adjustments	2.260	1.228	-14.887	-0.454
Summary of Adjustments				
Congressional Reductions	-1.000			
Congressional Undistributed Reductions	-0.825	-0.072		
Congressional Increases		1.300		
Economic Assumptions	0.012		0.087	0.245
Program Adjustments	4.073		-14.974	-0.699
Subtotal	2.260	1.228	-14.887	-0.454

Schedule:  
TRIDS CHANGES:

LATR - LATR/TCTS tech transfer now starts in 4th quarter 2006 (vice 3rd quarter 2009) at a low level as risk mitigation to evolving TCTS interfaces and development. Block upgrades 5.1 through 6.3 slipped 6 months each as upgrade yearly cycle was delayed due to range interface additions, test asset availability and delays in obtaining range Authority To Operate (ATO).

EW Processor – Have limited schedule up to IOC - continued development based on Fleet requirements.

RADS Upgrades – Previously identified as Radar Display Subsystem. IOC completed early in 2005. Semi-annual upgrades will occur 1st and 3rd quarters of every year through 1st quarter 2009. R-4 displays PDR, CDR, DEV, and T&E for each baseline upgrade evolution.

Link 16 TACTS Dev – Previously Link 16 TACTS Integration. Delay start in 2006 then expected as a result of gathering information and identifying Fleet requirements. One quarter slip in IOC date due to schedule delays.

ASOC Upgrades - Semi-annual upgrades will occur 1st and 3rd quarters of every year through 1st quarter 2010. R-4 displays PDR, CDR, DEV, and T&E for each baseline upgrade evolution.

JDS (Joint Display Subsystem ) Upgrades - Previously JDS IOC. Semi-annual upgrades will occur 1st and 3rd quarters of every year through 1st quarter 2009. I have shown PDR, CDR, DEV, and T&E for each baseline upgrade evolution.

Test Set Rehost – Complete 2005

TCTS CHANGES:

The following have been made to better reflect program status and MDA APBA Chg 3.

AWTD Schedule:

The R-4 was revised to more clearly show: 1. The overall requirement of AWTD across the FYDP for Risk Mitigation, and Technology Transition(top row). 2. Transitions to major programs such as NASMP, MH-60R, and MMA (second row). 3. Major project categories to be prototyped and tested in the ATTIF (third row). 4. The two major task performance areas are specification and government software development (rows 4 and 5). 5. Test and Evaluation of the prototype technologies. Some intermediate milestones/activities from the previous Schedule R-4 have been included in the roll-up for clarity.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops specialized instrumentation systems for fleet readiness training while minimizing life cycle costs. Tasks include development of the following: electronic warfare simulators and associated subsystems, target control systems, Tactical Aircrew Combat Training System (TACTS), Large Area Tracking Range (LATR) improvements, Test and Training Enabling Architecture (TENA) interoperability, combat training systems improvements, underwater technology, ranges interoperability and information architecture, and assorted Advanced Weapons Training Systems (AWTS), such as Imaging Weapons Training System (IWTS), Remote Strafe Scoring System (RSSS), and weapon and countermeasure simulations for use with various range training systems.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.492	1.568	.853	2.991
RDT&E Articles Qty				

LATR: Designed, integrated and tested modules to eliminate obsolete components in the LATR Pod. Completed design, integration and test of LATR software 5.0 baseline upgrade. Complete design, integration, and test of participant instrumentation packages (PIP) modules to address obsolescence, high failure components and to improve operability and performance. Conduct and complete installation of the Ground System Rehost. Conduct and complete security testing and assessment for LATR system certification and accreditation for Ground System Rehost. Complete development, test and integration of software and hardware modifications to system test sets. Develop interface software using Test and Training Enabling Architecture (TENA) to increase Tactical Training Range systems interoperability with other services training instrumentation. Continue development of LATR rotary wing re-size and LATR Datalink emulator.

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.125	1.391	.459	.893
RDT&E Articles Qty				

TACTS: Developed additional training capabilities for the personal computer based Joint Display Subsystem (JDS) and the Electronic Warfare Processor (EW PROC). Enhance capability for Advanced Systems Operator Console (ASOC), enhanced Radar Display Subsystem (RADS), and ancillary systems interfaces. Continued development and deployment of LINK 16 interface for TTR applications. Complete Semi-annual CCS Block upgrades.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Battle Force Tactical Training (BFTT) Program provides realistic joint warfare training across the spectrum of armed conflict; realistic unit level team training in all warfare areas; a means to link ships together which are in different homeports for coordinated training; external stimulation of shipboard training systems; and simulation of non-shipboard forces. BFTT uses a distributed architecture, integrating existing training systems, and uses Distributed Interactive Simulation (DIS) protocols. BFTT provides ships' Commanding Officers and Battle Group/Battle Force Commanders with the ability to conduct coordinated realistic, high stress, combat system level team training as an integral part of the Afloat Training Organizations, the Tactical Training Groups and C2F/C3F Fleet Synthetic Training Exercises (FSTs). BFTT provides a baseline capability/system that meets the Operational Requirements Document (ORD).

The Total Ship Training System (TSTS) Combat System Trainer (CST) enhancement to BFTT shall employ a spiral development process to allow continuous incremental implementation of core training system functionality and critical warfighting training capabilities in multiple mission areas as prioritized by the Fleet. TSTS will improve upon the current BFTT DIS interoperability limitations and model databases by developing the requisite architecture and associated computer programs to facilitate the transition to HLA and common modeling, scenario generation and control and assessment. Migration to TSTS is required to ensure continued, persistent Fleet Synthetic Training (FST) interoperability. TSTS will integrate existing and emergent onboard training and assessment system capabilities to simulate realistic, "train like you fight", combat-like conditions across combat systems, engineering, damage control and navigation systems. It shall provide a continuous shipboard organic learning environment interoperable with NCTE through On-Demand, Just In Time (JIT), scenario-driven, Objective Based Training (OBT), and mission rehearsal capabilities initially available in port, and ultimately underway and in-theater.

<p>K1427: Develops conjunctive Battle Force Tactical Training (BFTT) System improvements and interface upgrades in response to evolving combat system capabilities. Responds to Fleet prioritized Training Systems capabilities in multiple mission areas including Anti-Submarine Warfare, Electronic Warfare, Air Warfare, Strike Warfare, Ballistic Missile Defense, Anti-Surface Warfare, and Amphibious Warfare. Efforts include architecture migration, model database improvement, scenario development, system/software engineering, program management, safety assessment, software design, software development, and system integration, test and evaluation, logistics support and life cycle sustainment planning. Reduction in FY08 significantly mimimizes development of system improvements/interface updgades directly affecting the ability to conduct unit level training for crew and battle group FST events in FY08.</p>

<p>K3087: Develops the Total Ship Training System (TSTS) Baselines 1.0, 1.1 and 2.0 as well as the completely redesigned, re-architected, and enhanced Combat System Trainer (CST) enhancement to BFTT. TSTS training elements include Navigation Seamanship &amp; Shiphandling, Engineering, Damage Control Training &amp; Management, Naval Gunfire Support, Augmented Reality Fire Fighting, Anti-Submarine Warfare, Command and Control, Air Warfare, Strike Warfare, Ballistic Missile Defense, Anti-Surface Warfare, Amphibious Warfare and the Scalable Shore Based Trainer (SSBT) LCS component. TSTS efforts include scenario development, knowledge management, common environment system/software engineering, technical system design, software design, safety assessment, program management, software development, system integration, test and evaluation and logistics support. Prototypes of the various TSTS hardware and software subsystems, including the LCS Simulators, will be designed and documented in a design specification. Reductions in FY07 and FY08 considerably reduce the scope of TSTS. Current funds will focus primarily upon completion of the first combat system spiral (TSTS Baseline 1.0) and the initial planning for the second and third spirals (Baseline 1.1 and 2.0).</p>

42400 Weapon Range OPN 276200 (Surface (N86) BFTT/TSTS portion only)	35.124	13.375	13.039	16.394	23.617	17.358	21.024	20.801		160.732
<b>D. ACQUISITION STRATEGY:</b>										
The BFTT acquisition strategy for system development utilizes the spiral development model, as mandated by OSD. Incremental acquisition and fielding, utilizing commercial off-the-shelf technology to the extent possible, is in accordance with the BFTT ACAT IVM Milestone III approved documentation.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project transitions new training system technologies for use in naval aviation training. Products from this effort are directly tied to the Navy and Marine Corps Aviation Simulation Master Plans (\$479M), the MH-60R/S master plan, the Multi-Mission Maritime Aircraft (MMA) program, and will support the development and design of future naval aviation training/mission rehearsal systems. Tasks include: 1) Advanced training systems specification development to provide for modular, High Level Architecture (HLA) compliant, high fidelity Distributed Mission Training (DMT) and mission rehearsal capabilities, ashore and afloat. Mission rehearsal is defined as the practice of planned tasks and functions critical to mission success using a true-to-life, interactive representation of the expected operating environment. Technologies to be developed and integrated include: 1) DMT weapons server, weather server, common mission training stations, high-resolution helmet mounted, and/or flat panel displays, photographic quality image generation, portable source initiative (PSI) database reuse, advanced environmental effects modeling, fused radar/infra-red/electro-optic and acoustic sensor simulations, physics-based IR stimulations; and 2) the Aviation Training Technology Integration Facility (ATTIF), which is a man-in-the-loop test bed for the integration of software, hardware, and networked systems. New technologies will include intelligent computer generated forces (CGFs) as virtual and constructive entities for threat or friendly interaction. Additionally, "man-in-the-loop" intelligent agents will be integrated to the ATTIF, including an HLA node for participation and benchmarking fleet exercises in the synthetic battle space. This ATTIF capability provides a window to fleet aviators for critical comment, evaluation, and fine tuning of new and innovative technologies before final transition to the Fleet. Debrief/AAR and intelligent training support tools are focused on human performance enhancements for Fleet readiness and distributed mission training exercises.

Metrics - These technology transitions will both lower total ownership costs (TOC) of the training systems, and life-cycle costs, including: visual system database re-use, reduced instructor manning profiles, software-based fidelity enhancements), and increased fleet readiness by enhancing overall system fidelity to the projected operating environments. NASMP/MCSMP readiness improvements are conservatively forecast at 14-28% following associated technology upgrades to stand alone, or networked simulators.

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0204571N, CONSOLIDATED TRAINING SYSTEMS	PROJECT NUMBER AND NAME 2124, AIR WARFARE TRAINING DEVEP
---	--	---

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.741	.647	.759	.810
RDT&E Articles Qty				

HUMAN SYSTEMS INTEGRATION: HUMAN SYSTEMS INTEGRATION Provide for upgraded and modular Mission Training Station (MTS) designs to lower NASMP/platform simulator life-cycle costs, improve instructor effectiveness and provide for multi-SAF exercise utilization. Analyze, develop, and integrate ATTIF modular architecture components for FA-18 cockpit avionics, MH-60R avionics, intelligent instructor operator agents, small footprint E-2C, TACAIR/MMA common GUI initiatives, threat system (NGTS) compatibility, MCSMP TEN compatibility, and JSAF compatibility, performance measurement, and after-action review (AAR)/debrief, thereby maximizing ROI for mission training station-related technology investments for multi-platform services.

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.325	.325	.300	.250
RDT&E Articles Qty				

SENSORS: Integrate IR (NVG & Forward Looking Infra-Red (FLIR) sensor simulation)) with Sensor Host Government, Off The Shelf Software (GOTS). Perform risk reduction, integration and production of Sensor host for Navy DMT and legacy devices. Demonstrate GOTS capability for cost-effective database materialization, and develop PSI/RSD specifications for implementation on DMT, deployed trainers, legacy, and new visual system upgrade programs. Develop texture storage, PSI material reference processes/standards, and automated applications for R/T publishing, R/T shadows, R/T combat effects, and very high-resolution visuals.

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.317	.495	.338	.407
RDT&E Articles Qty				

SYSTEMS ENGINEERING AND INTEGRATION: and integrate ATTIF modular architecture components for Navy DMT, deployable E-2C/D crew stations, intelligent synthetic forces, and tactical scenario control. Demonstrate low-cost DMT configurations, while maintaining or increasing fidelity. Demonstrate low cost training and mission rehearsal configurations, and evaluate variable fidelity cockpits. Demonstrate instructor support technology including advanced scenario generation, multi-SAF control, automated measures of performance (MOP), and debrief/AAR products for NASMP. Analyze GOTS/COTS alternatives for network centric warfare connectivity in the simulated battlespace, while reducing training system life cycle costs.

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.025	.214	.338	.314
RDT&E Articles Qty				

VISUALS: AWTD visual engineering provides for risk mitigation and next generation visual system prototype test & evaluation for both stand-alone and small footprint/deployable devices. Supporting the NASMP and T/M/S platform programs, advanced visual system display configurations are assessed, and developed to include: next generation helmet mounted displays (HMDs), laser visual systems, and associated database technologies.

D. ACQUISITION STRATEGY: Air Warfare Training Development (AWTD) is a 6.4 RDT&E joint technology transition program tied to the Naval Aviation Simulation Master Plan (NASMP) and the various platform simulation master plans with the purpose of transitioning advanced training and mission rehearsal technologies. AWTD provides risk mitigation, test & evaluation, and prototype development for stand-alone, distributed, and deployed training systems for the warfighter utilizing an IPT approach and a combination of reimburseable and direct cite T&M contracts.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Tactical Combat Training System will provide the Navy a replacement for major portions of the Tactical Aircrew Combat Training System (TACTS) and Large Area Tracking Range (LATR) system. TCTS will also provide fleet deployable training for at-sea training and tactics development. By providing a rangeless capability, the system will greatly increase the area where live instrumented training can be conducted. Initial fielding of a Non-Developmental Item (NDI) Pod system was at NAS Key West. The program incorporates an evolutionary development (incremental) towards a system capable of supporting a broad spectrum of naval platforms through weapons simulations, participant weapons system stimulation, open architecture and a high capacity/long range secure data link. The Milestone Decision Authority (MDA) approved program rebaseline on May 23, 2005. The MDA approved acquisition streamlining February 2006, which included additional RDT&E test articles to support Operational Test.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	15.711	7.705	3.538	3.031
RDT&E Articles Qty	39	6		

TCTS: Qualified and completed the NDI Rangeless Pod system fielded at NAS Key West, including the complete Integrated Logistics products and training. Developed and implemented track exchange interface between TCTS live monitor and TACTS Control and Computation Subsystem (CCS). Defined Test and Training Enabled Architecture (TENA) compliant interface between TCTS and an Advance Display System. Developed F/A-18 (C/D/E/F) Internal Subsystem (IS) and began qualification testing. Initiated development of the Fixed Ground Subsystem and data link uplink control for fielding at larger Navy training ranges. Develop and deliver Integrated Logistics products for the IS and for fielding the TCTS system for deployed and fixed Range applications. Initiated the development of an Rack-Mounted Subsystem for use on rotary wing and transport aircraft. Continue to development of the Advanced Data link waveform and the Joint Tactical Radio System (JTRS) advance data link. Develop shipboard ground subsystem and related training range integration.

C. OTHER PROGRAM FUNDING SUMMARY:

D. ACQUISITION STRATEGY: TCTS will employ an evolutionary incremental acquisition strategy to procure a base Non-Developmental Item System and development of the system to meet the full ORD requirements. TCTS is a cooperative program with the USAF P5 CTS program. The USAF awarded a 10-year contract in June 2003.

3087C: FY06 and FY07 Congressional Plus Ups provided for Total Ship Training System (TSTS) to analyze requirements, design, develop, test, and deliver a functional Training Management System (TMS) prototype with related documentation for elements of TSTS. Prototypes of the various TMS hardware and software subsystems will be designed and documented in a design specification including: Personnel Management subsystem, Communication Audio Capture subsystem, and the Video Capture subsystem.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>The Advanced Cryptologic Systems Engineering program develops state-of-the-art signal acquisition software in response to Combatant Command requirements for a quick-reaction surface, subsurface and airborne cryptologic carry-on capability. There are approximately 100 cryptologic capable surface ships in the current Navy inventory. Each of these ships is a potential user of this carry-on equipment, depending on deployment schedules and the tempo of operations. In addition, there are numerous subsurface and air platforms that are also potential users. This funding line will provide the resources to enable rapid transition of available Commercial Off The Shelf (COTS) and Government Off The Shelf (GOTS) technologies that apply to Fleet requirements for carry-on system functionalities. These technologies typically require various levels of integration to leverage on-board systems that provide system and mission management, product reporting and data analysis. COTS/GOTS system documentation and training materials usually require some level of adaptation or modification to meet fleet operator requirements, or entirely new training materials may need to be developed. Before deployment for operational use, systems must be systematically tested to ensure suitable and reliable operation, tested for network vulnerabilities if connected to shipboard LANs, and tested relative to interoperability requirements. This RDT&amp;E will provide resources to address rapid deployment of enhancements or improvements to the common hardware and/or software baseline of all other carry-on subsystems to meet emergent requirements.</p>								
<b>(U) JUSTIFICATION FOR BUDGET ACTIVITY:</b>								
<p>This program is funded under BA-7, OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing development for upgrade of existing operational systems.</p>

FY06 - Continued to integrate, test, and document identified Commercial and Government off-the-shelf technologies and subsystems that meet emergent and on-going Fleet requirements. Developed and integrated software and/or hardware improvements to Carry-on Cryptologic Systems. Efforts supported various servers and Hostile Forces Integrated Targeting Subsystem (HITS). Completed studies necessary to modify topside antenna configuration.

FY07 - Continue to integrate, test, and document identified Commercial and Government off-the-shelf technologies and subsystems that meet emergent and on-going Fleet requirements. Continue with developing upgrades to existing systems and subsystems according to Fleet requirements.

FY 08 - Continue to integrate, test, and document identified Commercial and Government off-the-shelf technologies and subsystems that meet emergent and on-going Fleet requirements. Continue with developing upgrades to existing systems and subsystems according to Fleet requirements.

FY 09 - Continue to integrate, test, and document identified Commercial and Government off-the-shelf technologies and subsystems that meet emergent and on-going Fleet requirements. Continue with developing upgrades to existing systems and subsystems according to Fleet requirements.

A. Mission Description and Budget Item Justification

Information Warfare Systems/Z2263

(U) The Navy Information Operations Command Suitland (NIOC) serves as the Program Management Office of the Offensive Information Warfare (IW) program. As such, NIOC Suitland is tasked as the Navy's principal technical agent to research, assess, and develop IW capabilities. The key focus areas include Information Operations (IO) Mission Management, Electronic Attack (EA), and Computer Network Operations.

(U) IO Mission Management: Develops software to account for antenna modeling, weather calculations, RF modeling, signals mapping and terrain modeling for warfighter use in configuring optimal Electronic Attacks from afloat. Develops command and control mechanism for remote use of Electronic Attack assets to include frequency, antenna alignment and weapon firing data transfer. Develops a modeling and simulation laboratory for the program office to use in the development, intended effect, and risk reduction of new EA capabilities.

(U) Electronic Attack (EA): Develops and fields spiral EA capabilities against Fleet Forces Command prioritized signals and target sets. EA capabilities will be integrated into a software architecture baseline that is deployed on subsurface, airborne and surface IO platforms (Classic Troll, Banshee and SSEE-Inc E/F.)

(U) Computer Network Operations (CNO): Funds development and testing of adversary target networks for modeling, simulation, and tailoring of CNO capabilities. Develops specific CNO capabilities to be used against adversary networks. Supports Electronic Target Folder database which provides a means of sharing and storing common CNO data. Studies unique adversary CNO vulnerabilities for exploitation.

(U) This program differs greatly between FY07 - FY08 and out due to the designation of NIOC Suitland as the Information Operations Research and Development Innovation Center. This caused a realignment of funds from an existing program (details are held at a higher classification level) and a re-appropriation of funds to all RTD&E. Specific variances in FY08 funding will be discussed at the project level.

(U) In FY08 this program transfers from BSO 41 to BSO 39.

(U) This program received a POM06 CNO plus-up which added approximately \$7M in FY07 and \$13M in FY08.

Retract Barley/Z2462

Details held at a higher classification level

## A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

(U) HIGH-SPEED ANTI-RADIATION (HARM) IMPROVEMENT: The High-speed Anti-Radiation Missile (HARM) is a joint service program with the Air Force (NAVY lead). The program commenced production in FY1983. Program Element 0205601N was used until FY 1990 to develop and test one hardware and two software upgrades to the HARM (AGM-88B, Block III & AGM-88C, Block IV) as Engineering Change Proposals (ECPs). Another ECP software program (Block IIIA & V) was developed (FY1996 through FY1999) to modify HARM software in order to meet operational requirements. The Block V tactical software upgrade gives HARM improved geographic specificity and improved capability against advanced waveforms. HARM Block IIIA/V software was distributed to the Fleet in FY2000. HARM Improvement includes efforts to conduct Foreign Military Exploitation (FME) analysis and engineering to exploit vulnerabilities of foreign anti-radar threats. HARM Improvement includes funding for threat assessment, operational updates, and integration efforts.

(U) ADVANCED ANTI-RADIATION GUIDED MISSILE (AARGM): AARGM is an ACAT-1C acquisition program in System Development & Demonstration (SD&D) to upgrade the AGM-88 HARM missile with multi-mode / multi-spectral guidance and targeting capability. It also incorporates the capability to receive national broadcast data and transmit weapon impact assessments (demonstrated in Quick Bolt ACTD). An AARGM System Development and Demonstration (SD&D) commenced in FY2003. The AARGM program plans production of 1,879 missiles; 83 Low Rate Initial Production (LRIP) and 1,796 Full Rate Production modification kits.

(U) DIRECT ATTACK GUIDED ROCKET/APKWS: Formerly known as the Advanced Precision Kill Weapons System (APKWS), APKWS II was an Army System Development & Demonstration (SD&D) program to develop a low cost Semi Active Laster (SAL) precision guidance section for existing 2.75 inch unguided rockets.

(U) The Army did not include APKWS in POM08 submission, therefore the APKWS program is being curtailed. Efforts will be made to close out the contract through FY07.

## B. PROGRAM CHANGE SUMMARY

Funding:	FY 2006	FY 2007	FY 2008	FY 2009
Previous President's Budget:	84.569	99.208	30.994	5.766
Current President's Budget :	<u>87.212</u>	<u>99.829</u>	<u>34.762</u>	<u>7.993</u>
Total Adjustments	2.643	0.621	3.768	2.227
Summary of Adjustments				
Congressional Reductions	-1.800	-0.379		
Congressional Rescissions				
Congressional Decreases		-5.000		
Congressional Increases		6.000		
Economic Assumptions			0.083	0.114
Miscellaneous Adjustments	<u>4.443</u>		<u>3.685</u>	<u>2.113</u>
Subtotal	2.643	0.621	3.768	2.227

## Schedule:

AARGM: FCA, PRR, and PCA moved from 1Q FY08 in PB07 to 2Q FY08. LRIP 1 moved from 2Q FY08 in PB07 to 3Q FY08.

APKWS: The Army did not include APKWS in POM08 submission, therefore the APKWS program is being curtailed. Efforts will be made to close out the contract through FY07.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The AGM-88E Advanced Anti-Radiation Guided Missile (AARGM) Project transitioned a Phase III Small Business Innovative Research (SBIR) program to develop and demonstrate a multi-mode guidance section on a HARM airframe to System Development and Demonstration (SD&D) in FY2003. The AARGM SD&D program is designed to integrate multi-mode guidance (passive Anti-Radiation Homing (ARH)/active Millimeter Wave (MMW) Radar/Global Positioning system/Inertial Navigation System (GPS/INS)) on the HARM AGM-88 missile. AARGM weapon system capabilities include: active Millimeter Wave terminal guidance, counter shutdown, expanded threat coverage, enhanced anti-radiation homing receiver, netted targeting real-time feed via Integrated Broadcast Service (IBS) prior to missile launch, weapon impact assessment transmitted prior to detonation, GPS/point-to-point weapon navigation, and weapon employment with impact avoidance zone/missile impact zones.

The AARGM program transitioned the Quick Bolt Advanced Concept Technology Demonstration (ACTD) to SD&D. Quick Bolt added the capabilities to receive threat data from national assets, enlarging the target set and increasing aircrew situational awareness, and to transmit a Weapon Impact Assessment (WIA) message to assist in the critical area of Battle Damage Assessment (BDA). The Quick Bolt ACTD was completed in FY03. Quick Bolt demonstration testing successfully used Impact Avoidance Zone (IAZ) logic to distinguish between the prescribed and original target, demonstrating the ability to greatly reduce friendly fire incidents and collateral damage.

In June 2003, a successful Milestone B transitioned AARGM to a System Development and Demonstration (SD&D) Acquisition Category 1C (ACAT 1C) program. ATK Missile Systems Company (AMSC) was awarded the AARGM SD&D NAVAIR Contract N00019-03-C-0353, valued at \$222.6M. In May 2004, the contract was increased to \$231.9M to accelerate incorporation of an embedded IBS-Receiver, enabling the warfighter to directly receive National intelligence data, providing additional AARGM targeting data to increase overall pilot situational awareness. The AARGM program plans to produce 31 test articles and 1,879 missiles (83 Low Rate Initial Production (LRIP) missiles and 1,796 Full Rate AGM-88Es).

In FY2009-2013, the AGM-88E AARGM program plans to develop and demonstrate the capability to engage and destroy non-traditional suppression of enemy air defenses (SEAD) and GWOT targets. These developments continue Future Naval Capability (FNC) Science and Technology (S&T) investments by the Office of Naval Research (ONR) initiated in FY2006.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

AARGM SD&D	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	76.442	91.976	32.773	6.001
RDT&E Articles Qty	6	8	17	

Milestone B System Development and Demonstration (SD&D) activities, and post-Milestone B SD&D efforts. Contractor to update the Advanced Technology Demonstration (ATD)/Advanced Concept Technology Demonstration (ACTD) subsystem designs to the SD&D System Performance Specification and prepare for/conduct System Design Review, Preliminary Design Review, Critical Design Review, Contractor build-up and laboratory and field testing of the AGM-88E seeker. Field activities to support System Engineering, aircraft integration (including Software Configuration Set support), test assets, and test and evaluation requirements analysis, and developmental logistics support. Conducted successful System Preliminary Design Review on 05 April 2005 and Critical Design Review on 28 February 2006. In FY2007, DT-B1 will be completed with integration and captive carry of AARGM on F/A-18C/D. Live fire testing will begin in FY2007 and continue through FY2008. OPEVAL will begin in FY2008 and complete in FY2009. Development of capability to attach non-traditional SEAD and GWOT targets will continue in FY2009.

D. ACQUISITION STRATEGY:

The AARGM program started as a Phase I Small Business Innovative Research (SBIR), Advanced Technology Program (ATD), evolved into a Phase III SBIR program, and transitioned into a System Development and Demonstration (SD&D) ACAT 1C program in June 2003. The AARGM SD&D will fulfill U.S. Navy operational requirements and incorporates AARGM ATD and Quick Bolt ACTD-demonstrated system requirements. Government responsibilities for SD&D include monitoring, technical assessment, and validation of contractor technology development and testing.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Formerly known as the Advanced Precision Kill Weapons System (APKWS), APKWS II is an Army System Development & Demonstration (SD&D) program to develop a low cost Semi Active Laster (SAL) precision guidance section for existing 2.75 inch unguided rockets. APKWS II will provide an inexpensive, small, lightweight; precision-kill weapon that is effective against soft and lightly armored targets and which enhances crew survivability with increase standoff range. APKWS II offers precision, maximum stored kills per aircraft sortie, minimum collateral damage potential, and increased effectiveness over legacy unguided rockets. The guidance package can be assembled with existing unguided rockets components (warhead and rockets motor) and can be fired from existing rocket launchers. The Navy's effort on the Smart Rocket Launcher has been delayed pending further funding.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	2.096			
RDT&E Articles Qty				

APKWS II-System Development and Demonstration (SD&D) program to develop a low cost Semi Active Laser (SAL) precision guidance section for existing 2.75 inch unguided rockets.

The Army did not include APKWS in POM08 submission, therefore the APKWS program is being curtailed. Efforts will be made to close out the contract through FY07.

C. OTHER PROGRAM FUNDING SUMMARY:

FY 2006    FY 2007    FY 2008    FY 2009    FY 2010    FY 2011    FY 2012    FY 2013    To Complete    Total Cost

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

(U) This program element (PE) develops and improves the Navy's tactical data link (TDL) systems. It includes the Link-16 Improvements and Advanced Tactical Data Link Systems (ATDLS) Integration Programs.

(U) Link-16 Improvements extends Link-16 technological improvements to existing and new United States (US) Navy TDL systems, including Link-16 and Link-22. Link-16 Joint Range Extension (JRE) transfers Link-16 data via satellite communications and other non-radio frequency (RF) paths. High Throughput Link-16 provides improved data transmission rates by altering the modulation characteristics of Link-16. Link-22 will pass Link-16 data elements beyond the line-of-sight using a Time Division Multiple Access (TDMA) protocol and improved waveform with existing high-frequency (HF) and ultra-high-frequency (UHF) radios. This project allows more effective employment of fleet units by increasing timeliness, accuracy, and content of tactical data transfer and eliminate line-of-sight transmission limitations thereby improving operational flexibility. The Common Data Link Monitoring System (CDLMS) will be upgraded to Next Generation Command and Control Processor (NGC2P) to provide higher Central Processing Unit (CPU) speeds, update rate and memory capacity required for advanced multi-TDL processing functions. NGC2P will update CDLMS with advanced processors required to support critical data link functions including Link-16 JRE.

(U) ATDLS Integration Program develops new and improved capabilities for Navy Link-16 users. Development of new capabilities in ATDLS includes the Joint Interface Control Officer (JICO) Support System (JSS), Common Link Integration Processing (CLIP) and Dynamic Network Management (DNM). JSS will be the standard joint service toolset to monitor and control Multi-TDL network architectures. The Common Link Integration Processing (CLIP) concept will introduce open system software required to reduce life cycle support costs and commercial off-the-shelf (COTS) technology refresh objectives and high throughput Link-16. The CLIP development concept addresses fundamental interoperability and affordability of tactical data link capabilities through cooperative development program under both U. S. Navy (USN) and U.S. Air Force (USAF) sponsorship. The principal goal of CLIP is to develop a multi-TDL software capability that can be utilized by multiple platforms (aircraft, ships, and ground) for all services. Dynamic Network Management (DNM) will provide automatic reconfiguration of Link-16 networks that respond instantly to emergent warfighter requirements in the field. DNM consists of different capabilities including NetworkControl Technologies (NCT), new terminal protocols (time slot reallocation (TSR) receipt compliance (RC) (TSR RC) and Stochastic Unified Multiple Access (SHUMA)) and has been significantly expanded to include a more robust TSR and adaptive multi-netting. The DNM capability will be integrated into the JSS host system and also Joint Tactical Information Distribution System (JTIDS), Multifunctional Information Distribution System (MIDS) and Joint Tactical Radio System (JTRS) terminals.

(U) FY06 includes Congressional Increase for the Airborne Tactical Server (ATS). ATS is a digital audio/video recorder with removable mass memory and a CPU. The ATS will function as an adjunct processor within the F/A-18 to demonstrate Level 2 Airborne Network Integration. The ATS will use an existing contract for demonstration only as risk reduction for future Battlespace Networking efforts.

(U) This program element also funds: (1) the development required to accommodate expanded Link-16 operational capabilities for additional warfare areas, (2) development of automated network management aids, and (3) related systems engineering and contractor support efforts.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing development for upgrade of existing, operational systems.

 (U) Schedule:				
Link 16 (project 1743) - Next Generation Command and Control Processor (NGC2P) milestone C ( MS C ) properly renamed as Low Rate Initial Production - 2 (LRIP-2) Program Review for interim LRIP decision. TECHEVAL and OPEVAL will occur together in 4th Qtr FY07. FRP for NGC2P has now planned for in 2nd Qtr FY08.				
ATDLS (project 2126) - Common Link Integration Processing (CLIP) CDR modified from 2nd Qtr FY 06 to 3rd Qtr FY 06 and, DT shifted 3rd Qtr FY 06 to 4th Qtr FY 06 in order to facilitate incorporation of additional technical requirements to support platform integration and CLIP key performance parameters. Following Increment 1 MS C (2nd Qtr FY08), CLIP development continues as a U.S. Air Force program.				
Dynamic Network Management (DNM) Stochastic Unified Multiple Access (SHUMA)/time slot reallocation (TSR) initial operating capabilities (IOC) shifted from 3rd Qtr FY 08 to 1st Qtr FY 09 to align with Joint Tactical Information Distribution System (JTIDS)/Multifunctional Information Distribution System (MIDS) and host platform updates. Platform Integration Testing events have been added to meet the AEGIS Baseline requirements. Multi-netting test events described as Phase I and Phase II. Phase I addresses requirements in the Tactical Data Link (TDL) Capabilities Development Document (CDD). Phase II addresses a fully dynamic multi-netting capability as addressed in the TDL CDD.				
JSS milestone C slipped from 4th quarter FY07 to 4th quarter FY08. Full Rate Production (FRP) slipped 2nd quarter FY08 to 4th quarter FY08.				
 (U) Technical: Not applicable.

This funding line includes the Navy's contribution to the Common Link Integration Processing (CLIP) joint development initiative with the Air Force. The Air Force is funding the CLIP software development contract in FYs 08 and 09.

FY 06 Accomplishments: Conducted CLIP Increment 1 Preliminary Design Review (PDR) and Critical Design Review (CDR). Conducted development testing of Increment 1 software capabilities and functionality.

FY 07 Plan: Conduct CLIP Acceptance Testing (CAT) of Increment 1 software capabilities and functionality including COMOPTEVFOR and Air Force Operational Test and Evaluation Command participation (AFOTEC). Develop plans for platform integration and testing of Increment 1 software on lead air platform. Prepare for U.S. Navy and U.S. Air Force (USAF) CLIP increment 1 Milestone C decision (2QT/FY08). After increment 1 MS C, CLIP development continues as an USAF program.

Dynamic Network Management (DNM)	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	15.048	5.951	5.034	6,165
RDT&E Articles Quantity				

FY 06 Accomplishments: Continued Dynamic Network Management (DNM) development expanding capability to support full Multi-netting Phase I capability allowing for data forwarding between Link-16, Internet Protocol (IP) networks and new Joint Tactical Radio System (JTRS) waveforms. Conducted Multi-netting Phase I CDR. Conducted Multi-netting Phase I capabilities development test. Completed integration of NetworkControl Technologies (NCT) capabilities into JSS. Conducted SHUMA development test. Commenced shipboard and aircraft integration of the DNM capabilities including the expanded Time Slot Reallocation (TSR) Receipt Compliance TSR RC. Conducted TSR RC development test. Conducted TSR RC platform integration testing for C2P/CDLMS. Continued support on DNM integrated logistic support products.

FY07 Plan: Continue development of multi-netting capabilities and migration efforts to Wideband Networking Waveform (WNW) and JTRS waveforms. Commence development of Multi-netting Phase II capability. Continue platform integration and testing of TSR RC (AEGIS Baselines).

FY08: Continue development of Multi-netting Phase II capabilities. Conduct Multi-netting Phase I operational test. Continue migration efforts to WNW and Joint Tactical Radio System (JTRS) waveforms. Conduct TSR RC/SHUMA operational test. Continue platform integration testing for TSR RC (AEGIS Baselines).

FY 09: Conduct Multi-netting Phase II CDR. Conduct Multi-netting Phase II development test with both JSS system and Link-16 terminals. Continue migration efforts to WNW and JTRS waveform. Achieve Stochastic Unified Multiple Access (SHUMA)/TSR RC IOC.

<b>(U) D. ACQUISITION STRATEGY:</b>										
<p>The Air Force was designated as the acquisition executive for the Joint Interface Control Officer Support System (JSS). For JSS Phase I, the government competed and awarded three firm fixed price contracts to Northrop Grumman Defense Mission Systems, Inc.; Lockheed Martin Corporation and Advanced Information Engineering Services, Inc. for Engineering Development Models (EDM) system development and demonstration. For JSS Phase II, there was a down select to Northrop Grumman Defense Mission Systems, Inc. to complete Phase II development, integration and test utilizing cost plus award fee, firm fixed price, time and material and cost reimbursable contract options. For Common Link Integration Processing (CLIP), a competitive cost plus award fee/incentive fee contract was awarded by the Navy to Northrop Grumman Defense Mission Systems, Inc. to develop a single common data link integration solution that can be configured to satisfy a broad-range of platforms. The Dynamic Network Management (DNM) Network Controller Technology will be incorporated into JSS Block 1 and will utilize the contract for JSS. Remaining DNM development efforts will utilize an existing development contract with BAE Systems.</p>										
<b>(U) E: MAJOR PERFORMERS:</b>										
<p>Northrop Grumman Defense Mission Systems, Inc., Reston, Virginia (VA). Performs as prime hardware and software development contractor for JSS. Contract awarded 27 May 2005.</p> <p>Northrop Grumman Defense Mission Systems, Inc., Reston, VA. Performs as prime software development contractor for CLIP. Contract awarded 9 June 2005.</p> <p>Space &amp; Naval Warfare Systems Command Systems Center (SPAWARSYSCEN), San Diego, California. Performs as lead laboratory for CLIP, JSS and DNM development, systems engineering, integration and test and evaluation.</p>

The Joint Interface Control Officer (JICO) Support System (JSS) is a multi-service development effort and is currently funded by the Navy's Tactical Data Links Program Office (PE 0205604N/2126) and the Air Force's Electronic Systems Center Tactical Data Links System Program Office (TDL SPO) (PE 0207434F/5050). The JSS Program schedule is shown above.

The CLIP Program is a joint initiative and is funded by U.S. Navy and U.S. Air Force programs. The development of the CLIP software is funded by the Navy's Tactical Data Links Program Office (PE 0205604N/2126) and the Air Force Tactical Data Links (TDL) Gateways and Network Management (TGN) System Program Office (PE 0207434F/5050). The integration of CLIP software is funded by platforms. The CLIP Program schedule is shown above. U.S. Navy is not participating in Increment 2 of CLIP.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The objective of this Program Element (PE) is to significantly improve existing surface ship sonar system capabilities through quick and affordable development and integration of emergent transformational technologies.

Project 0896 focuses on the identification, development, test, and integration of the most promising Anti-Submarine Warfare (ASW) technologies into the AN/SQQ-89(V) Surface Undersea Warfare (USW) Combat System. This project will provide a clear transition path for emergent transformational ASW technologies to be quickly and affordably developed and incorporated into the AN/SQQ-89(V). This project will capitalize on a Rapid Technology Transition (RTT) process, enabling the aggressive pursuit of improvements to system portability, extension of interoperability with multiple platforms, and opportunity to export these capabilities Navy wide. Time phased insertion of ASW Commercial-Off-The-Shelf (COTS) improvements will address the entire combat system, including new sensor integration, acoustics, fire control, contact management, performance prediction, operator productivity, and on-board training.

Project 1916 improves AN/SQQ-89(V) Measures Of Performance (MOP) by enhancing detection, tracking, classification, active and sonobuoy data processing and display capabilities, and increasing acoustic sensor frequency bandwidth. This project will take advantage of the AN/SQQ-89(V) Open System Architecture (OSA) and Acoustic Rapid COTS Insertion (ARCI) initiatives to develop and integrate a Multi-Function Towed Array (MFTA) with active sonar bistatics (Echo Tracker Classifier - ETC), an ARCI passive ASW processor, and torpedo defense capabilities (Forward and Aft sector coverage with Wake Homer protection). This COTS-based surface USW combat system, the AN/SQQ-89A(V)15, is currently planned as a backfit program for both CG47 (CG59-73 Baseline 3 and 4) and DDG51 (DDG51-112 FLT I/II/IIA) class ships. The Open Architecture (OA) (level 3 compliant) AN/SQQ-89A(V)15 system drives the spiral development process and provides budget flexibility to make COTS/OA technology solutions and ARCI-type initiatives affordable. This will be accomplished via the incorporation of select Pre-Planned Product Improvements (P3I) and emergent, transformational ASW technologies (such as, those developed under Project 0896) delivered to the AN/SQQ-89(V) prime integrator every two to three years.

Project 1916 includes FY 2006/2007 Congressional Adds for 'Surface Ship ASW Research and Development (R&D) Improvements'. Funding will be used to continue the development of promising technologies for at-sea tests in representative war fighting environments. Project 1916 includes FY 2006 Congressional Add for 'Common Surface and Air Undersea Warfare'. Funding will be used to continue the Air and Surface Ship Peer Review Process integration approach using an OA system to develop and test a single "Best of Breed" Common Airborne Undersea Sensor Software (CAUSS) processing baseline that will be used by all USW sonobuoy communities. Project 1916 also includes FY 2006/2007 Congressional Adds for 'Surface Ship Sonar Integrated Data Fusion Initiative'. Funding will be used to support the development, test, and evaluation of an integrated sonar data fusion and display capability for Surface Ship USW Combat Systems.

Project 9A75 includes FY 2007 Congressional Add for 'Advanced Materials for Acoustic Window Applications'. Funding will be used to study the feasibility of replacing existing sonar window materials with a material that has the potential to provide a Total Ownership Cost (TOC) reduction of three (3) to five (5) times for acoustic windows used on Navy surface combatants such as the DDG 51 and DDG 1000 Class vessels, while improving mission readiness and acoustic performance.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The AN/SQQ-89 Modifications Project will focus on the identification, development, test, integration and delivery of the most promising ASW technologies to the AN/SQQ-89(V) Surface USW Combat System. This project will provide a clear transition path for emergent transformational ASW technologies (i.e., through ASW Cross Functional Board (formerly known as Task Force ASW) initiatives) to be quickly and affordably developed and incorporated. This project will capitalize on a RTT process, enabling the aggressive pursuit of improvements to system portability, extension of interoperability with multiple platforms, and opportunity to export these capabilities Navy wide. Time phased insertion of ASW COTS improvements will address the entire combat system, including new sensor integration, acoustics, fire control, contact management, performance prediction, operator productivity, and on-board training.

This project will take technologies developed by Program Executive Office for Integrated Warfare Systems, Undersea Systems Program Office (PEO IWS 5), Office of Naval Research (ONR), Defense Advanced Research Planning Agency (DARPA), and the Oceanographer of the Navy, that achieve significant improvements in ASW effectiveness and integrate them into the AN/SQQ-89(V) Surface USW Combat System. The following improvements have been considered in the near term: develop and integrate the Low Frequency Array's (LFA) low frequency coherent multi-static processing capability for the AN/SQR-19 towed array group; leverage ARCI's Sparsely Populated Volumetric Array (SPVA) technology to increase bandwidth and incorporate acoustic intercept capability for the surface community; develop a Data Fusion capability that will integrate ASW, radar and other non-acoustic sensors into an integrated display environment; develop Marine Mammal Detection and Mitigation (MMDM) enhancements; and develop an effective and affordable underwater Acoustic Communications (ACOMMS) system for seamless communications between ASW platforms. Additional improvements will be developed and integrated as new, promising technologies are identified.

FY06-09: Identify technologies developed by PEO IWS 5, ONR, DARPA, and the Oceanographer of the Navy that may achieve significant improvements in ASW effectiveness if integrated into the AN/SQQ-89(V) Surface USW Combat System. Selected promising technologies will be sufficiently integrated into adjunct systems installed in the AN/SQQ-89(V), such as the Improved Performance Sonar (IPS) and Scaled Improved Performance Sonar (SIPS), so that at-sea tests can be conducted and performance assessed. Integration of successful technologies will be completed for installation on CG47, DDG51, and FFG7 class ships as part of SIPS software updates. Successful software improvements will also be passed on to the AN/SQQ-89(V) prime integrator as part of the spiral development build process under Project 1916, for fielding in the OSA AN/SQQ-89A(V)15 USW Combat System that is being installed on CGs 59-73 and DDGs 51-112.

Related RDT&EN: PE 0205620N/ Surface ASW System Improvement Project 1916, PE 0603553N/ Surface ASW Project 1704

**D. ACQUISITION STRATEGY:**

- Identify and test promising evolutionary and transformational technologies via incorporation on adjunct IPS and SIPS systems; and deliver successful technologies in the form of software updates to AN/SQQ-89(V) prime system integrator for integration into the AN/SQQ-89A(V)15 USW Combat System via spiral development build process.
- Award new, competitive contract for AN/SQQ-89(V) prime system integrator in FY 2007.

**E. MAJOR PERFORMERS:**

- Advanced Acoustic Concepts (AAC), NY - Small Business Iniative Research (SBIR) Phase III contract for common acoustic processor, acoustic intercept, and prime contractor for adjunct AN/SQQ-89(V) IPS and SIPS programs.
- Adaptive Methods (AM), MD - SBIR Phase III contract for engineering services in support of hardware/software integration, and test of advanced sensor interfaces and sensor processing improvements including Data Fusion (DF), Adaptive Beamforming (ABF), and Calibrated Reference Hydrophone (CRH) sensor interface.
- Johns Hopkins University Applied Physics Laboratory (JHU/APL), MD - Development of emerging active sonar technologies.
- Naval Sea Systems Command, Newport, RI - AN/SQQ-89(V) Technical Design Agent support.
- University of Texas Applied Research Laboratory (UT/ARL), TX - Sonar Performance Prediction Functional Segment (SPPFS) software development.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Surface ASW Systems Improvements Project will support essential performance enhancements to AN/SQQ-89(V) and Surface Ship Sonar Systems. This project will improve AN/SQQ-89(V) MOP by enhancing detection, tracking, classification, active and sonobuoy data processing and display capabilities, and increasing acoustic sensor frequency bandwidth.

This project will take advantage of the AN/SQQ-89(V) OSA and ARCI initiatives to develop and integrate a MFTA with active sonar bistatics (ETC), an ARCI passive ASW processor, and torpedo defense capabilities (Forward and Aft sector coverage with Wake Homer protection). This COTS-based Surface USW combat system, the AN/SQQ-89A(V)15, is currently planned as a backfit program for both CG47 (CG59-73 Baseline 3 and 4) and DDG51 (DDG51-112 FLTI/II/IIA) class ships. This project has delivered the AN/SQQ-89A(V)15 Build 0 Pre-Production Prototype, performed installation on board CG73, and conducted subsequent Developmental Test & Evaluation (DT&E) and Initial Operational Test & Evaluation (IOT&E) where the system was found 'Operationally Effective' by Command Operational Test and Evaluation Force (COMOPTEVFOR).

The OSA and high performance COTS processing hardware on ships fielded with the AN/SQQ-89A(V)15 combat system provides an opportunity to integrate select P3I as well as emergent, transformational ASW technological improvements (as developed under Project 0896) that were previously unachievable. The USW suites on these ships will require periodic upgrades to remain effective well into the 21st century. To achieve this, this project will package and deliver incremental upgrades every two years to the AN/SQQ-89A(V)15 production program via a spiral development build process by inserting maturing USW technologies, such as enhancements to improve USW performance in the littoral, and via reduced manning on AN/SQQ-89(V) equipped ships, active classification sonar upgrades, marine mammal detection and mitigation, Multi-Static Active ASW, Multi-Frequency Acoustic Communications (MF ACOMMS) between Surface Combatants and Submarines, new RAPTOR radar processing, and upgraded technologies such as algorithm improvements, increased Passive Narrow Band (PNB) frequency, improved Extended Echo Ranging (EER), and beamformer improvements. A rigorous testing program is also required to ensure that these performance enhancements are operationally effective and suitable.

Project 1916 includes a realignment of the Surface Ship Enhanced Measurement Program (SSEMP) from PE 0603553N, Project 1704, beginning in FY 2008. SSEMP measures the performance of existing and new Surface Ship ASW combat systems and enables data based assessment of the capabilities and shortfalls in the performance of these systems in realistic scenarios.

Project 1916 includes FY 2006/2007 Congressional Adds for 'Surface Ship ASW R&D Improvements'. Funding will be used to continue the development of promising technologies for at-sea tests in representative war fighting environments. Project 1916 also includes an FY 2006 Congressional Add for 'Common Surface and Air Undersea Warfare'. Funding will be used to continue the Air and Surface Ship Peer Review Process integration approach using an OA system to develop and test a single "Best of Breed" CAUSS processing baseline, that will be used by all USW sonobuoy communities. Project 1916 includes FY 2006/2007 Congressional Adds for 'Surface Ship Sonar Integrated Data Fusion Initiative'. Funding will be used to support the development, test, and evaluation of an integrated sonar data fusion and display capability for Surface Ship USW Combat Systems.

**CLASSIFICATION:**

EXHIBIT R-2a, RDT&E Project Justification		DATE: <b>FEBRUARY 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N / BA-07</b>	PROGRAM ELEMENT NUMBER AND NAME 0205620N Surface ASW Combat System Integration	PROJECT NUMBER AND NAME 1916 Surface ASW Systems Improvements

**B. Accomplishments/Planned Program**

	FY 06	FY 07	FY 08	FY 09
Surface Ship ASW R&D Improvements	3.915	6.369	0.000	0.000
RDT&E Articles Quantity				

FY06-07: (Congressional Add) Continue the development of Surface Ship ASW improvements that increase capability in passive/active sonar detection and in own ship torpedo self defense. This is through use of portable, modular software to ease transition to new families of COTS hardware, and the low cost incorporation of improved processing algorithms. This program addressed critical surface sonar capability shortfalls, such as: passive/active ASW in difficult littoral areas, torpedo defense detection and response times in all areas, and automation technology for reduced manning. Funding addressed these shortfalls by using the Advanced Processing Builds (APB) model that has rapidly delivered transformational modernization through exploitation of application reuse and low cost incorporation of improved processing algorithms.

	FY 06	FY 07	FY 08	FY 09
Common Surface and Air Undersea Warfare	2.055	0.000	0.000	0.000
RDT&E Articles Quantity				

FY06: (Congressional Add) Continued the Air and Surface Ship IPS Multi Processor Interconnect (MPI) technology transition process using an OA baseline, developed common technology innovations into the Air and Surface USW communities that provided generational improvements to offboard processing and integrated decision-making, provided technology transition of the common capabilities into the Littoral Combat Ship (LCS), DDX, SIPS, P-3C, SH-60R, Multi-Mission Aircraft (MMA) and warfighting communities, and used this developed technology to demonstrate a common Air USW Mission Module for LCS.

	FY 06	FY 07	FY 08	FY 09
Surface Ship Sonar Integrated Data Fusion Init.	2.078	1.800	0.000	0.000
RDT&E Articles Quantity				

FY06-07: (Congressional Add) Develop software to consolidate the display of all surface combatant sonar contacts at a single multi-modal analysis workstation and automatically developed fused target motion solutions for threat assessment and engagement.

**D. ACQUISITION STRATEGY:**

Completed AN/SQQ-89A(V)15 Build 0 Pre-Production Prototype, performed installation, conducted DT&E, and Initial IOT&E 4Q FY 2005. Via spiral development build process, incorporate evolutionary and transformational technologies into AN/SQQ-89A(V)15 systems at scheduled intervals.  
Award new, competitive contract for AN/SQQ-89(V) prime system integrator in 2Q FY 2007.

**E. MAJOR PERFORMERS:**

- AAC, NY - SBIR Phase III contract for common acoustic processor, acoustic intercept, and prime contractor for 'Common Surface and Air Undersea Warfare' FY 2006 Congressional Add provided to develop and test a single "Best of Breed" CAUSS processing baseline that will be used by all USW sonobuoy communities.
- AM, MD - SBIR Phase III contract for common acoustic processor and towed array/beamformer processing improvements to the MFTA functional segment and prime contractor for 'Surface Ship Sonar Integrated Data Fusion Initiative' FY 2006/2007 Congressional Adds.
- General Dynamics-AIS (GD-AIS, formerly DSR), VA - SBIR Phase III contract for common acoustic processor, prime contractor for 'Surface Ship ASW R&D Improvements' FY 2006/2007 Congressional Adds provided to complete the development of promising technologies for at-sea tests in representative warfighting environments.
- JHU/APL, MD - Design, development and integration of MFTA, Torpedo Detection Classification and Localization (TDCL) improvements, SSEMP participation in experiment planning, conduct, data reconstruction and post-exercise analysis.
- Lockheed Martin, NY - Prime AN/SQQ-89(V) System Integrator, Production and Design Agent.
- Naval Sea Systems Command, Newport, RI - AN/SQQ-89(V) Technical Design Agent support.
- Naval Sea Systems Command, Dahlgren, VA - AN/SQQ-89(V) Technical Design Agent support.

<p><b>A. (U) Mission Description and Budget Item Justification:</b>                      MK48 ADCAP RDT&amp;E program executes spiral development of weapon performance improvements in three development product areas: (1) Common Broadband Advanced Sonar System (CBASS); (2) Advanced Processor Builds (APBs), and (3) Torpedo Technology Insertion. The budget enables Acquisition Category (ACAT) III development to address Chief of Naval Operations (CNO) defined capability-based requirements and mission needs. This PE (0205632N/0366) is tied to development programs that leverage a joint US/Australia, Armaments Cooperative Project to develop MK48 ADCAP, and Future Naval Capability technologies being developed by Office of Naval Research (ONR).</p> <p>(U) Countermeasure (CM) sophistication and availability on the open market directly affects ADCAP kill proficiency and its ability to counter rapidly evolving threats. The focus of the MK 48 ADCAP torpedo R&amp;D program for FY01 and out shifted from being primarily concentrated on Software Block Upgrade efforts towards coordinated hardware upgrades, rapid Commercial-Off-the-Shelf insertion, and APBs to rapidly upgrade the ADCAP to counter evolving threats and maintain robust performance. The CBASS program will develop and field a broadband sonar capable of identifying CMs and discriminating them from the target. CBASS will develop 22 test articles (2 test vehicles and 20 Engineering Development Models (EDMs)). CBASS met Milestone II requirements on 6 March 1998 and received MDA approval to proceed into EMD. CBASS Phase I received FRP decision in June 2006. Initial Operational Capability (IOC) is scheduled for FY06. The Commonwealth of Australia, Royal Australian Navy (RAN) is participating to jointly develop CBASS torpedo and signed an Armaments Cooperative Project (ACP) Agreement Mar 2003. The intent of the CBASS program is to achieve improvements in shallow water torpedo performance.</p> <p>(U) The MK 48 ADCAP (Advanced Capability) torpedo R&amp;D program focuses on two specific areas near term: Torpedo Advanced Processor Builds (APBs) and broadband sonar capability. The CNO continues to stress shallow water (less than 600 feet) as a critical operating area to counter third world diesel electric submarines. Torpedo testing in shallow water has demonstrated that in-service ADCAP has less than full capability in this difficult environment. However, this testing, in conjunction with laboratory simulation efforts, has shown that significant performance improvements can be made by implementing changes to weapon tactics and software algorithms. Development, implementation and testing of these changes is being accomplished under the Torpedo APB program. This program also leverages the RAN joint torpedo program and Future Naval Capability (FNC) technologies being developed by the ONR in the areas of torpedo broadband signal processing, tactics processing, and alertment. The Torpedo APB program also will incorporate MK 54 Lightweight Torpedo algorithms and tactics software to create a Common Torpedo Development program. Future APB software builds will utilize the common torpedo software to deliver software and tactics to both the MK 48 ADCAP and MK 54 Lightweight torpedoes.</p> <p>(U) The Torpedo Technology Insertion program will provide for evolutionary torpedo improvements and upgrades (including the transition and testing of advanced technologies from the R&amp;D community (6.2/6.3) and contractors). This approach will incorporate developmental testing of the FNC transitioning technologies for ADCAP upgrades in the areas of torpedo sensors, weapon/platform connectivity, warhead lethality, speed and depth. These efforts will continue torpedo development investment at a lower cost and shorter term than traditional torpedo programs.</p> <p>(U) Both FNC technologies and MK 54 Lightweight torpedo developments will be transitioned into ADCAP through Tech Insertion packages. Priorities for Tech Insertion are a new array to improve torpedo effectiveness, an electric propulsion system to improve torpedo performance and reduce the cost of maintaining Fleet readiness, and an improved warhead that resists inadvertent detonation and fulfills commitments documented in the Program Executive Office-Submarines Insensitive Munitions Strategic Plan of 15 February 2006</p>

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Project 0601 - Common Ground Equipment is a Naval Aviation Project to apply new technology to common support equipment necessary to support multiple aircraft. Project 0852 - Consolidated Automated Support System (CASS) is a standardized Automated Test Equipment (ATE) with computer assisted, multi-function capabilities to support the maintenance of aircraft subsystems and missiles. Project 1041 - Aircraft Equipment Reliability/Maintainability Improvement Program (AERMIP) is the only Navy program that provides engineering support for in-service out-of-production aircraft equipment, and provides increased readiness at reduced operational and support cost. Project 1355 - Aircraft Engine Component Improvement Program (CIP) develops reliability and maintainability (R&M) and safety enhancements for in-service Navy aircraft engines, transmissions, propellers, starters, auxiliary power units, electrical generating systems, fuel systems, fuels, and lubricants. Project 3189 - Digital I-TER will develop an increased capability to the existing BRU-42 Improved Triple Ejector Rack (ITER) for the AV-8B. Project 3190 is the Multi-Purpose Bomb Rack (MPBR). The MPBR will replace the BRU-41/41/42/33/55 and provide use for both tactical and training stores on one common rack. The MPBR will be integrated on the F/A-18A+/C/D and F/A-18E/F as part of this project. Project 9999 is Congressional Adds.

\*\$10.350M received in FY 2007 Title IX for Digital I-TER.

Schedule: Project 0601 -Acquisition, testing and production milestones adjusted for TETI program. The milestones were shifted to the right by approximately two quarters. After the early planning meetings for the TETI program, the original schedule was determined to unrealistic. The schedule change will allow the program to be executed much more effectively, including early obligation and expenditure of the program RDT&E funds. Milestone A was mistakenly included on the FY06/07 President's budget, and has been eliminated. As TETI is a spinoff of two other engine test system programs (JETI and SETI), there is no need to go through a Milestone A.

Due to the anticipated complexity of the NGMH, and the potential for the production contract award going to a different contractor than the original developer (Foster Miller Corporation), additional time was incorporated into the schedule to require the production contractor to build and successfully performance test several LRIP units before Full Rate Production (FRP) is initiated. This additional schedule time lowers risk to the program and postpones the FRP by one quarter.

Project 1041 schedule changes due to maturation of several programs and several new start efforts.

Technical: Not Applicable

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Common Ground Equipment is a Naval Aviation project to apply new technology to common support equipment necessary to support multiple systems/aircraft within the Navy. The common support equipment items developed with this budget are briefed to the Air Force, Army and Coast Guard for possible use in joint procurement in the production phase.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Next Generation Munitions Handler (NGMH)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.060	1.400	1.423	.507
RDT&E Articles Qty	1	1	1	1

R&D program to develop robotic weapons loader for both ship and shore with primary focus on targeting future weapons and aircraft. Plan is to support CVNX initiatives and to back-fit current CVs and amphibious ships. Utilize technology features developed under NGMH program. One Lab prototype will upload/download munitions in support of sea-based aviation, specifically the CVN-21 environment. It will be a self-powered diesel/electric unit with human amplification technology. Newly developed high-torque electric actuator/motors will provide the robotics. Variable geometry lonator wheels will provide the mobility for the vehicle. Self-diagnostics for maintenance analysis will be included for the design.

Turboprop Engine Test Instrumentation (TETI)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.616	1.639	1.550	2.402
RDT&E Articles Qty	1	1	1	1

The Turboprop Engine Test Instrumentation (TETI) program objective is to provide an integrated computer based measurement and automation system for Intermediate Maintenance level testing of Navy/Marine Turboprop engines. The acquisition approach is to develop, acquire, validate, deploy and support production configurations of TETI and Test Program Sets (TPS), utilizing the existing Jet Engine Test Initiative (JETI) technology, and integrate this capability into existing land based engine test systems. This enhanced capability will allow for full performance engine testing of the T56 Series Turboprop engines. An ECP will be developed to upgrade the existing engine test systems.

**UNCLASSIFIED**

EXHIBIT R-2a, RDT&E Project Justification		DATE: February 2007
APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0205633N, AVIATION IMPROVEMENTS	PROJECT NUMBER AND NAME 0601 A/C HANDLING & SERVICES EQ

Shipboard Firefighting Vehicle:	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost				.358
RDT&E Articles Qty				1

The Shipboard Firefighting Vehicle program objective is to provide a safe reliable and maintainable way to support air capable ships with flight deck fire suppression during flight operations. The acquisition approach is to develop, acquire, validate, deploy and support production utilizing the lessons learned from the current firefighting vehicle and new emerging technology. This will enable us to integrate this capability into a new firefighting vehicle, which will be fully capable to support the current and future flight deck fire suppression mission.

C. OTHER PROGRAM FUNDING SUMMARY:	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost
APN 070500 Ground Support Equipment	191.352	168.204	169.100	160.592	163.486	164.486	153.514	152.636		1,323.370
Related RDT&E: Not Applicable										

D. ACQUISITION STRATEGY:

This is a non-ACAT program. Field activities propose tentative RDT&E projects. Internal panel merits and selects projects. Field activities develop projects and submit results. Operational Advisory Group (OAG) process selects projects to transition to procurement.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Consolidated Automated Support System (CASS) project designs and develops modular automated test equipment with computer-assisted, multi-function test capability, standardized hardware, and standard software elements. CASS responds to Fleet Commanders' expressed requirements to correct serious deficiencies in existing automatic test equipment. Program objectives are: (1) increase material readiness; (2) reduce life cycle costs; (3) improve tester sustainability at depot and intermediate maintenance levels; (4) reduce proliferation of unique test equipment, and (5) provide test capability for existing and emerging avionics/electronics systems.

Technologies being developed include synthetic instruments, new Advanced Targeting Forward Looking Infrared (ATFLIR) electro-optics capability, multi-analog test capability to enable functional testing, and CASS station modernization elements.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

CASS Station Upgrades	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.026	.181	.200	.200
RDT&E Articles Qty				
	1	1	1	1

CASS Station Upgrades

Provides technologies for upgrading CASS station test capability to test emerging weapon system requirements. Includes development of new test capability and extending existing test range accuracies in the time and frequency domains to support low-frequency analog/digital, electro-optic, and radio frequency (RF) systems.

Electro-Optic Capability	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	2.175	1.200		
RDT&E Articles Qty	1	1		

Develops a downsized electro-optic support system to enable Reconfigurable Transportable CASS (RTCASS) to provide support for Marine Air FLIR and LASER Targeting systems.

CASS Modernization Development	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	5.454	5.473	6.615	6.816
RDT&E Articles Qty	1	1	1	1

Develops and integrates the technologies that will comprise the Modernization Program for the early lots of CASS stations which will be modernized and updated to current testing technologies while maintaining full compatibility with the legacy test program sets. Technologies include: downsized and scalable packaging techniques, multi-lingal runtime capability, interoperability framework and architectures, diagnostics data handling, virtual/synthetic/next-generation instrument concepts and the Agile Rapid Global Combat Support (ARGCS) Advanced Concept Technologies. (ACTD).

C. OTHER PROGRAM FUNDING SUMMARY:	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost
APN 070500 CASS	74.978	79.400	82.248	84.223	86.100	87.890	105.564	111.176		711.579
Related RDT&E: Not Applicable										

D. ACQUISITION STRATEGY:

Formal test technology reviews with industry are conducted annually (cooperative Joint Services initiative) to define maturity of needed technologies. Further studies are conducted as needed. Procurement strategy is determined by market survey and cooperative opportunities.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: AERMIP is the only Navy program which provides Research, Development, Test & Evaluation (RDT&E) engineering support specifically for in-service, out-of-production aircraft equipment. AERMIP increases readiness through Reliability and Maintainability (R&M) and safety improvements to existing systems and equipment installed in Naval aircraft. It also provides a transition vehicle to deploy Total Ownership Cost (TOC) reduction initiatives through flight-test support and Fleet Test & Evaluation. It meets affordable readiness objectives by providing a cost-effective solution to obsolescence problems encountered when service lives are extended. AERMIP promotes commonality and standardization across aircraft platform lines and among the services through extension of application and use of non-developmental items. AERMIP also decreases life cycle costs through reduced operational and support costs. AERMIP facilitates the Operational, Safety and Improvement Program by applying proven low-risk solutions to current fleet problems. AERMIP also funds high priority flight testing which is not associated with any acquisition or development program under the Flight Test General (FTG) task.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Avionics and Wiring	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.620	1.596	.900	1.013
RDT&E Articles Qty				

AVIONICS AND WIRING (A)

Validate and transition Office of Naval Research (ONR) funded Smart Wire technology by conducting full aircraft flight test. Verify and validate a replacement Advanced Data Collections System that remotely downloads memory unit information for the AN/ASH-37(v) Structural Data Recording Set (SDRS). Test and perform the required changes to validate the ASW-27 as a replacement to the ASW-25. Perform the required testing to validate that the miniature version Arc Fault Circuit Breaker designed for fighter/attack aircraft and helicopters will work through system level Electro Magnetic Compatibility (EMC) and lighting events. Advance the Processor Maintainability efforts beyond the initial prototype stage to validate that accuracy of the developed common processes to ensure that reliability and maintainability issues caused by obsolescence components are identified and solutions options developed before the issues become critical. Opportunities and issues arise yearly that demand immediate attention to provide significant benefit or to avert an unanticipated problem. AERMIP actively pursues these issues and opportunities and responds quickly to implement a solution. Products are a qualified material or piece of equipment and the procedures/process required for its implementation. Pursue next generation wiring diagnosis and prognostics methods and prove the applicability to Naval aviation. Address avionics related reliability issues impacting multiple aircraft platforms.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Aircraft Engine Component Improvement Program (CIP) provides the only source of critical design and development engineering support to resolve safety, reliability and maintainability deficiencies of in-service Navy aircraft propulsion systems. The highest priority issues CIP addresses concern safety-of-flight deficiencies which account for approximately 80% of CIP efforts. The program also corrects service-revealed deficiencies, improves Operational Readiness (OR) and Reliability and Maintainability (R&M), and reduces platform Life Cycle Cost (LCC). Budgets are allocated across platform-specific teams and multi-platform product support teams based upon long term strategies to achieve safety and affordable readiness goals; the R-3 exhibit details annual portions of those long-term plans. CIP tasks have reduced the rate of in-flight aborts, safety incidents, non-mission capable rates, scheduled and unscheduled engine removals, maintenance work hours, and overall cost of ownership. This is accomplished through the maintenance and validation of specification performance, testing to qualify engineering changes, verifying life limits, and improving the inherent reliability of the propulsion system as an integral part of Reliability Centered Maintenance (RCM) initiatives. Historically, the missions, tactics, and environmental exposure of military aircraft systems change to meet new threats or operational demands, and often result in unforeseen problems, which if not corrected, can cause critical safety/readiness degradation, such as those experienced during DESERT SHIELD/DESERT STORM operations due to sand erosion. In addition, new problems arise through actual use during deployment of the aircraft. Development programs, while geared to resolve as many problems as possible before deployment, cannot duplicate actual operations or account for the vast array of environmental and usage variables, particularly when aircraft missions vary from those the aircraft was designed to perform. Therefore, it has been found that CIP can provide an immediate engineering response to these flight-critical problems and accelerated engine testing can avoid potential problems. CIP starts after development and Navy acceptance of the first production article and addresses usage and life problems not covered by warranties. CIP addresses engines, transmissions, propellers, starters, auxiliary power units, electrical generating systems, and fuel and lubricant systems. CIP efforts continue over the system's life, gradually decreasing to a minimum level sufficient to maintain the reliability, and decrease the operating costs, of older inventory. CIP is a highly leveraged and cooperative tri-service program with Foreign Military Sales participation.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

P3, E2, C130 (T56)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	9.000	8.462	7.762	6.500
RDT&E Articles Qty				

P3, E2, C130,(T56)

Implement the Engine Monitory System version 7.0 upgrade. Maintain safety margins by investigating turbine coatings and develop new designs, propeller integration efforts with potential propeller designs, perform engine hot section corrosion and fatigue analysis, and bearing improvements. Analysis of redesign for first stage turbine blades on T56-A427 engines. Qualification and verification testing of redesigned first stage turbine blades. Resolve service revealed problem. Work on resolving fuel nozzle choking issue. Resolve design problems in the areas of safety coupling, compressor leakage, generator problems, and electrical wiring problems. Mission updates and life analysis of critical components.

E2/C2/C130 (Props)	FY 2006	FY 2007	FY 2008	FY 2009

UH1N (T400)

Address top safety concerns as ranked by the OAG and System Safety Working Group, continue to update Navy maintenance manuals, continue to improve time-between-overhaul and reduced impact of high-time parts; T400 Improved Compressor Turbine Stub Shaft, T400 Improved Gas Generator Case Diffuser Inlet, T400 Improved Compressor Coating, T400 Life Management, Study T400 Parts Obsolescence.

AV-8B (F402)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.988	3.892	3.570	4.500
RDT&E Articles Qty				

AV-8B (F402)

Address top readiness degraders and AVDLR costs; safety of flight issues, engine removal and mission failure drivers, assess life management program issues for engine components. Project included but not be limited to: ASMET testing, support of a Fleet Leader Program, Analytical Condition Insepection (ACI), Engine Life Management Program (ELMP) execution and design fixes for any service revealed deficiencies. LPC 1 vane cracking problems and FMU mod problems. Analysis of ASMET engine test.

H-53/H-46/H-3 (T58/T64)	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	13.871	9.068	8.318	9.200
RDT&E Articles Qty				

H-53/H-46/H-3 (T58/T64)

Bleed valve redesign. Efforts on the top cause for engine removals; improve on wing times; addressed top safety concerns as ranked by the Operational Advisory Group (OAG); reliability-centered maintenance program; improve compressor blade retention design; and develop corrosion resistant bearing designs. Improve the mean time between engine removal based upon continued implementation of reliability center maintenance initiatives. Conduct life management analysis to resolve critical rotating component issues based upon engine structural integrity assessments and the master life management plan.

RDT&E,N / BA-7	0205633N, AVIATION IMPROVEMENTS			3189, DIGITAL I-TER				
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013
3189 DIGITAL I-TER		10.350	4.371	4.041	3.544			
RDT&E Articles Qty		6						

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: 3189 Digital ITER: This project develops an increased capability to the existing BRU-42 Improved Triple Ejector Rack (ITER) for the AV-8B, which adds a multiple carriage capability for Smart Weapons such as JDAM. Using existing ITERs as Government Furnished Material, the electronics tray will be replaced with a more capable electronics package allowing for smart weapons capability. This project plans to leverage an Air Force contract that upgrades their TER-9 system. When this development effort is complete, both the TER-9 and Digital ITER will have the same electronics capability. FY07-10 RDT&E funding will support full development of Digital ITER, including AV-8B integration and Test and Evaluation.

\*\$10.350M received in FY 2007 Title IX for Digital I-TER.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

DIGITAL ITER KIT DEVELOPMENT	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		4.491	2.494	1.589
RDT&E Articles Qty		6		

Continues Digital ITER kit development and prototype fabrication. Continues aircraft integration and Support Equipment re-design

DIGITAL ITER SOFTWARE DEVELOPMENT	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		5.859	1.000	.600
RDT&E Articles Qty				

Continue Digital ITER Software Development.

DIGITAL ITER TESTING	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost			.877	1.852
RDT&E Articles Qty				

Begin Developmental Testing and Operational Test planning.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:** The Naval Science Advisor Program ensures that the Fleet/Force (F/F) helps shape the Department of the Navy (DoN) investment in Science and Technology (S&T), develops teaming relationships to rapidly demonstrate and transition technology, supports development of technology-based capability options for naval forces, and enables warfighting innovations based on technical and conceptual possibilities. This is accomplished through proactive connectivity and collaboration between DoN S&T and Joint, Navy, and Marine Corps commands worldwide. The program accomplishes this through several methods. It provides Science Advisors to Joint, Navy, and Marine Corps operational and strategic planning commands. Science Advisors facilitate and disseminate Joint Capabilities Integration and Development System (JCIDS) requirements provided by the F/F Commanders to the Director of Navy Test and Evaluation and Technology Requirements (OPNAV N091). Science Advisors collaborate with the F/F to identify specific solutions to known operational capability needs and provide the means to develop and demonstrate prototype systems. As a result, Science Advisors provide insight into issues associated with Naval Warfighting Capabilities that influence S&T program decision making. The program develops leaders among civilian scientists and engineers in the Naval Research Enterprise (NRE). Upon completion of their tours, Science Advisors return to the NRE with first hand knowledge of the F/F, warfighting issues, and strategic decision making. The Naval Science Advisor Program enables continuous communication and collaboration between the warfighters, the technical community, and strategic development commands.

FY 2008/FY 2009 President's Budget Submission	5,609	3,363	3,473	3,608

**PROGRAM CHANGE SUMMARY EXPLANATION:**

Technical: FY 2006 program funded 24 Science Advisors. For FY 2007 and out, the program is funded for 24 Science Advisors. Changes from 2006 include: Joint Interagency Task Force-South assuming full responsibility for one Science Advisor billet; Naval Special Warfare Command eliminated the Science Advisor position; a new billet is being established to work with the Deputy Chief of Naval Operations for Communications Networks (OPNAV N6).

Schedule: Not applicable.

**C. OTHER PROGRAM FUNDING SUMMARY:**

Not applicable.

**D. ACQUISITION STRATEGY:**

## **E. PERFORMANCE METRICS:**

Goal: Provide leadership with timely S&T advice on issues.

Metric: Monthly reports by Science Advisors to the Office of Naval Research and senior leadership within their assigned commands.

Goal: Provide the optimum technological solutions to achieve Fleet/Force capability requirements.

Metric: Number of capability gaps reduced to technology gaps.

NAVAL SCIENCE ADVISOR PROGRAM	5,609	3,363	3,473	3,608

Changes to reflect FMB Controls

### FY 2006 Accomplishments:

The Science Advisors are a conduit between the Fleet/Force, the Office of Naval Research (ONR) and the NRE: Specific Fleet Accomplishments were:

- Science Advisor, Commander Seventh Fleet (COMSEVENTHFLT) (C7F), continued active support for discreet elements of the U.S. Pacific Command (PACOM) Pacific Air Study by pursuing CLASSIFIED joint technological CLASSIFIED Joint Force Maritime Component Commander (JFMCC) vulnerability study supported by the NRE. To date, JFMCC experimentation has involved three Carrier Strike Groups and one Expeditionary Strike Group. Elements of this JFMCC vulnerability study were defined under Naval Warfare and Doctrine Command Tactical Development and Evaluation Project 07-15.
- Science Advisor, Commander Fleet Forces Command (CFFC), increased Fleet inputs into the Future Naval Capabilities (FNCs), Rapid Technology Transition (RTT), and Joint Concept Technology Demonstration (JCTD) S&T programs. Coordinated and led scientist and engineers from the Naval Research Laboratory (NRL)/ONR, Office of the Chief of Naval Operations (OPNAV), United States Air Force (USAF) on familiarization tours of Navy ships, aircrafts, and landing craft. Collected data, surveyed F/F leadership and warfighters to justify the extension of the lease of the Joint High Speed Vessel (JHSV-2) Advanced Concept Technology Demonstrations (ACTD) Operational Management Team establish and execute Military Utility Assessment (MUAs) in order to capture the warfighter value of the ONR funded project. Shaped briefs, refined products, and recommended decisions to the Sea Trial Executive Steering Group (STESG) and Technical Oversight Group (TOG) through the Federal Networking Council and Sea Trial Exercise Plan (EXPLAN) processes.

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0205658N

PROGRAM ELEMENT TITLE: NAVAL SCIENCE ADVISOR PROGRAM

PROJECT NUMBER: 0834

PROJECT TITLE: LABORATORY FLEET SUPPORT

- Science Advisor, Joint Forces Command (JFCOM), supported development and exercise of Maritime Headquarters/Maritime Operations Center (MHQ/MOC) concept in the Navy's Trident Warrior Exercise by leveraging United States Joint Forces Command (USJFCOM) Joint Innovation and Experimentation Division's National civilian and foreign military engagement with the Second Fleet, Naval Net Warfare Command and North Atlantic Treaty Organization (NATO). Supported selection and fielding of technologies to improve efficiency and accuracy of the United States Marine Corps (USMC) personnel reporting and tactics through involvement of Program Reservists in an Urban Environment Exercise (TRUEX). Science Advisors facilitated engagements with various OSD, joint, service and foreign commands in order to identify areas of programs to improve Net Centric Warfare capabilities.
- Science Advisor, Commander U. S. Naval Forces Central Command (COMUSNAVCENT), developed and socialized COMUSNAVCENT Technology gaps. Science Advisor's worked with portable detector initiatives across programmatic, laboratory, and field fronts, while performing hands-on utility assessment, operational technology insertion at sea, and initiating RDT&E efforts to improve the detector under the ONR's Tech Solutions program. Initiated Urgent Need Statements (URNS) for a surveillance aerostat system, portable machine translators, and interdiction Unmanned Surface Vehicle (SUV), and portable chemical, biological, radiological, nuclear, and high yield explosives/Weapons of Mass Destruction (CBRNE/WMD) detector. Worked across the technical and programmatic lines to research and select commercially available technologies for rapid insertion into COMUSNAVCENT operations, including an at-sea tethered aerostat surveillance system and an armed USV for mobilization staff officer (MSO) interdiction.
- Science Advisor, Commander Submarine Forces Atlantic Fleet (COMSUBLANT), provided wide-ranging support to the COMSUBLANT staff on S&T issues. Completed the Submarine Technology Report for Congress. Led the Threat cell of the Unmanned Vehicle Command and Control Study tabletop war game. Evolved an engagement strategy with ONR and other S&T organizations for technology management to include a Future Capability Matrix (FCM) and Future Capability Measures of Performance (MOPs) tools.
- Science Advisor, Commander Naval Surface Forces Pacific Fleet (COMNAVSURFPAC), participated in SPARTAN (an Unmanned Surface Vehicle) Military Utility Assessment testing at Camp Pendleton. Managed the Scientist-to-Sea Program. Coordinated NAVSURFPAC activities with the Surface Ship Technology (SURFTEC) organization.

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0205658N

PROGRAM ELEMENT TITLE: NAVAL SCIENCE ADVISOR PROGRAM

PROJECT NUMBER: 0834

PROJECT TITLE: LABORATORY FLEET SUPPORT

- Science Advisor, Commander Third Fleet (COMTHIRDFLT) (C3F), coordinated and conducted an ONR sponsored Antisubmarine Warfare (ASW) Command and Control (C2) Limited Objective Experiment at C3F Maritime Operations Center. Investigated, submitted, and coordinated approval of ONR Tech Solutions project 802.11 device locating and monitoring system. Coordinated, planned, and conducted SPARTAN (an Unmanned Surface Vehicle) Advanced Concept Technology Demonstration program development for C3F. Established C3F as the Operational Manager for the Joint Multi-Mission ElectroOptic System (JMMES) Joint Technology Capability Demonstration (JCTD), a new FY'07 JCTD start. Coordinated C3F Sea Trial/Sea Shield Experimentation.

- Science Advisor, Commander Sixth Fleet (COMSIXTHFLT) (C6F)/Commander Naval Forces Europe (CNE), worked on further developing Maritime Security within the C6F Area of Responsibility (AOR). Worked with the Regional Maritime Awareness Capability (RMAC) Joint Capability Technology Demonstration (JCTD) team to obtain support and resources for the planning, and execution of RMAC. Helped establish the CNE-C6F Knowledge Management Director as RMAC Operational Manager, and assisted in obtaining detailees to serve on the CNE-C6F RMAC team. Worked to establish a broad interministerial base of participation, rather than strictly working in the military-to-military domain, to support engagement activities in the Gulf of Guinea, the Caspian Sea and the Black Sea. Led the RMAC team to São Tomé and Príncipe (STP) to obtain support of the STP government and civil sectors. Continued further develop of a Maritime Domain Awareness network and tools to support vessel traffic analysis. Served as the United States European Command (EUCOM) Co-Operational Manager for the Comprehensive Maritime Awareness (CMA) JCTD. Participated in the development of the Implementation Directive, Management Plan, and selection of an Operational Test Agent. Led an effort to embed Fast Connectivity for Coalitions and Agents Project (FastC2AP) into the CMA Advanced Concept Technology Demonstrations (ACTD), and defined the role of CMA in CNE-C6F Maritime Security and Safety programs. Provided technical oversight for the successful introduction and evaluation of FastC2AP into CNE-C6F and North Atlantic Treaty Organization (NATO) Component Commander, Maritime (CCMAR) operations. Served as the Predictive Analysis for Naval Deployment Activities (PANDA) link between CNE-C6F and PANDA Program Management to have CNE-C6F included among the sites at which PANDA will be deployed, bringing tremendous analysis capabilities to Maritime Security and Safety efforts. Organized the Maritime Security and Safety Information System (MSSIS) concept. MSSIS is the realization of a "multilateral, unclassified, freely-shared data network", which enables information sharing among enduring and emerging partners, and creates the foundation for control of maritime spaces. Successfully advocated and participated in the development of the Merchant Vessel Inspection Guide (MVGIG) concept to Technical Support Working Group (TSWG), ensuring that it was NATO-releasable in support of Operation Active Endeavor (NATO Maritime Interdiction Operations in the Mediterranean). Actively supported CNE-C6F Theater Security Cooperation (TSC) programs in the Gulf of Guinea. These activities included follow-up to the December 2005

PROJECT NUMBER: 0834

PROJECT TITLE: LABORATORY FLEET SUPPORT

S&T trip made to Nigeria and Cameroon, Maritime Security Strategy work in Ghana, participation in the Maritime Security in the Gulf of Guinea Ministerial Workshop in Benin, and obtaining support for RMAC in São Tomé and Príncipe from the heads of the STP government, military, and civilian sectors. Participated in the formulation of CNE and EUCOM strategies for Global War on Terror (GWOT) Phase 0 operations, and in defining the naval role in accordance with the National Strategy for Maritime Security. Participated in the development and certification of the Joint Task Force/Joint Force Maritime Component Commander (JTF/JFMCC) Headquarters. Joint Task Force Lebanon was the JTF final certification event. JTF Lebanon was a real-world event that transpired in August and September of 2006 to plan for, and be prepared to evacuate America embassy personnel from Beirut, to assist in the delivery of humanitarian assistance during the period that Israel enforced a naval blockade, and to plan for and be prepared to evacuate non-combatant personnel from Lebanon. Successfully identified and accredited desktop/LAN search engines for installation on all NIPR and SIPR stations at CNE-C6F. These two accomplishments represent a breakthrough in CNE-C6F Knowledge Management capabilities.

- Science Advisor, Commanding General 1st Marine Expeditionary Force (CG I MEF), established a requirement for and fielded a number of Operations Analysts within the Assessments branch of the MEF (FWD i.e., in Iraq) to help assess every mission/project thread. Developed the Escalation of Force analysis and reporting process with MEF (FWD). This process continues to be held monthly (by Office of the Appellate Defender (OAD) at Marine Corps Combat Development Command (MCCDC) and is presented at each Commander's Conference. Researched the viability of Mine-Resistant-Armor-Protected (MRAP) vehicles for the USMC in support of their Counter Improvised Explosive Device (IED) efforts. As a result of this research, an Urgent Universal Need Statement (UUNS) and Joint Universal Operational Need Statement (JUONS) were submitted. The Marine Corps Systems Command released a contract for these vehicles.

- Science Advisor, Chief of Naval Operations (CNO) Strategic Studies Group (SSG) facilitated broad technical exchanges among a variety of organizations and the SSG. Proactively identified potential sources of information sought by the Group's Concept Teams (CTs) and played an important role in the development of the Introductory Program by SSG. Established and expanded direct links with a broad spectrum of scientific, academic, and industrial organizations across the nation so that the SSG could benefit from an understanding of their endeavors as they might apply to naval warfare. Aggressively expanded the professional networks of the SSG, allowing the Group to engage with nationally-recognized experts in the generation of concepts for SSG XXV. Oversaw the planning and nationwide travel of four SSG teams to explore commercial, academic, and defense state of the art technology and processes.

PROJECT TITLE: LABORATORY FLEET SUPPORT

- Science Advisor, Joint Interagency Task Force (JIATF)-South, attended various operational evaluation working meetings. Participated in two Global Hawk Counterdrug demonstration flights for Target Boat Testing/Training. Briefed the Air Combat Command on the Contingency Aerostat Surveillance System (CASS). JIATF-South has assumed total responsibility for this position. ONR will continue to coordinate closely with JIATF-South on issues of mutual concern.
- Science Advisor, Commander, U.S. Marine Corps, Atlantic (COMMARFORLANT), supported establishment of a Foreign Language and Culture Program (FLCP). Updated MARFORCOM staff on status of current Voice Response Translator (VRTs), Phraselators, Iraqi Tactical Language Training System (TLTS), and Joint Forces Command (JFCOM) Language Translation initiatives. Collaborated with the II Marine Expeditionary Force (IIMEF) Science Advisor in the demonstration, evaluation, training, and fielding of VRTs and other language tools. Coordinated the delivery of 50 Phraselators and training support in support of II MEF units through JFCOM's Machine Foreign Language Translation program. Began coordination with MARFORPAC's Experimentation Cell (MEC) for training support during Mojave Viper at Twentynine Palms. Participated in the Joint Improvised Explosive Devise Defeat Office (JIEDDO) working group in order to assist in the identification of intelligence sources, potential software packages, social behavior models, and prediction algorithms. Coordinated delivery of Improvised Explosive Device Kwikpoint cards for 24th MEU. Assisted in the development of the USMC strategy for the acquisition of relevant core Non Lethal capabilities which support Irregular Warfare while providing the Marine Air-Ground Task Force (MAGTF) a flexible response to peace enforcement, stability and humanitarian relief operations.
- Science Advisor, Commander Naval Air Systems Command (COMNAVAIRSYSCOM), improved Flight Deck Communications System (IFCS). Initiated the design and development of an improved Acoustic Hailing Device for use as an Anti-terrorism/Force Protection (AT/FP) communications, warning/non-lethal deterrent and close-in surveillance device onboard Navy Ships (CANS). Initiated and managed several Tech Solutions programs to include CVN Surveillance System and CVN Underwater Hull Search Vehicle. Identified opportunities for senior scientists and engineers to get out to sea on CVN's and observe Fleet operations.
- Science Advisor, Chief of Naval Operations (CNO) Executive Panel (CEP), supported the CEP Near Term Assessment Study with emphasis on technology issues. Worked with the Office of the Secretary of Defense (OSD) Policy sub-groups on technology issues. Initiated the CNO directed Innovation and Technology Transition Subcommittee.

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0205658N

PROGRAM ELEMENT TITLE: NAVAL SCIENCE ADVISOR PROGRAM

PROJECT NUMBER: 0834

PROJECT TITLE: LABORATORY FLEET SUPPORT

- Science Advisor, Commanding General 2nd Marine Expeditionary Force (CG II MEF) continued working Improvised Explosive Devise (IED), Force Protection, Intelligence Surveillance Reconnaissance (ISR), Command and Control (C2), and Language Translation issues for MEF.
- Science Advisor, Commander, U.S. Marine Corps, Pacific (COMMARFORPAC), developed a successful proof of concept for the visualization tools and techniques needed for effective battle management and decision making at higher echelons of command, and demonstrated them to the Marine Corps requirements and acquisition commands. Worked on several critical Science and Technology (S&T) issues related to the Department of Defense (DoD) response in the United States Pacific Command (PACOM) to a pandemic outbreak of influenza. Conducted successful demonstration of cooling gloves, which have potential to reduce a Marine's core body temperature under high heat conditions.
- Science Advisor, Commander Pacific Fleet (COMPACFLT), focused efforts on Anti-submarine Warfare (ASW). Continued as a member of Task Force ASW and interacted heavily with the leadership of the Littoral ASW FNC. Coordinated the development of an ASW technologies assessment in support of Pacific Fleet Science and Technology requirements to support Pacific Area of Responsibility (AOR) wartime contingency plans. Worked on ASW search improvements and a thrust for automated marine mammal localization to mitigate possible interaction.
- Science Advisor, Naval Supply Systems Command (NAVSUP), completed demonstration of Machinery Health Monitoring/Sense and Respond Logistics (S&RL) application on an afloat platform (DDG) that connects condition based maintenance sensors to legacy maintenance and supply systems. Received fleet approval for funding of Modified Atmosphere Packaging System (MAPS) to extend shelf life for Fresh Fruits and Vegetables (FFV). Managed Navy Logistics Program (NLP) projects to include, Collaborative Logistics Program (CLP), Aviation Pack-up Kits (A-PUK), and Lead Free Solder. Managed NAVSUP's Small Business Innovation Research (SBIR) projects. Working with ONR on Sea-basing FNC EC for S&RL. Served as member of Virtual SYSCOM (VS) Systems Engineering working group. This working group completed an overhaul of VS Technical Authority policy. Working collaboratively with Navy Automated Identification Technology (AIT) Office to enable and expand use of AIT applications.

PROGRAM ELEMENT TITLE: NAVAL SCIENCE ADVISOR PROGRAM

PROJECT NUMBER: 0834

PROJECT TITLE: LABORATORY FLEET SUPPORT

- Science Advisor, Navy Warfare Development Center (NWDC), worked on the initial technical feasibility of the concept to use standard U.S. Army obscurants for U.S. Navy ship self-defense. Participated in a series of Maritime Headquarters with Marine Operations Center (MHQ w/MOC) events including the Command Third Fleet (C3F) sponsored Joint Force Maritime Component Commander (JFMCC) Tactical Memorandum (TACMEMO) Workshops and the Naval Warfare College (NWC) sponsored Maritime Security Workshop. Leading investigations into new and emerging technologies that could potentially support offshore infrastructure protection.
- Science Advisor, Naval Criminal Investigation Service/OPNAV (NCIS/N34), created the Navy Anti-Terrorism/Force Protection (AT/FP) requirements Technical Advisory Group (NAFTAG). Created a new RDT&E program entitled "Forensic/Biometric Equipment and Technology Demonstration". Created a new program to evaluate the anti-compromise aspect of Department of Defense (DoD) security/anti-terrorism/force protection technologies/prototypes. Appointed to the Naval Operations Staff (OPNAV) as the Lead for BioMetrics. Participated as the Navy representative in the Joint Service Biometric Quick Turn Capabilities Based Assessment (CBA) to identify urgent warfighting gaps and technical solutions in support of deployed forces.
- Science Advisor, U. S. Pacific Command (USPACOM), participated in counter-Improvised Explosive Device systems installation in Operation Iraqi Freedom (OIF) with the Naval Explosive Ordnance Disposal Technology Division. Coordinated ACTD efforts in the PACOM AOR. Participated in annual staff talks with Singapore. Coordinated Joint Coalition Maritime Awareness (CMA) efforts in the Pacific.
- Science Advisor, Commander Submarine Forces Pacific Fleet (COMSUBPAC), identified and provided engineering recommendations for fleet initiatives to optimize navigational communications capability for submarines operating in a surfaced condition. Worked with ONR's Tech Solutions Program to conduct an evaluation of how to make a submarine on the surface more visible to shipboard radars, and deliver an improved Submarine Radar Reflector prototype for the purpose of collision avoidance. Researched and provided technical assistance in the area of Ring Laser Gyro Navigation. Subsequent research and technical interaction resulted in the generation of an agreement between COMSUBPAC and the In-Service Engineering Agent (ISEA) to conduct periodic system hard drive analysis. Involved in development of solutions for communications at speed and depth that support war plan requirements. Provided guidance to the Submarine Force concerning the configuration and use of Digital Selective Calling (DSC). Due to the potential of undesired radio emissions, DSC employment became a high priority technical issue to be addressed throughout the Submarine Force.

- Science Advisor, Commander Special Warfare Command (COMNAVSPECWAR), coordinated the fielding of an optics detection system to assist the SEALs. Reviewed the Naval Surface Warfare (NSW) Technology Base program to give more direct input from the SPECWAR community. Identified sources and routes of transition funding to take capabilities under development and mature them to a point where they are ready for procurement. This Science Advisor position was eliminated by COMNAVSPECWARCOM.
- Science Advisor, OPNAV N81 (Assessments), synthesized products from think tanks, defense policy experts, intelligence analysts, warfighter, technologists and scientists, to frame S&T in the context of emergent security policy issues. Advised N81 on S&T issues. Led broad-based special studies on Navy vulnerability to future disruptive threats, areas for improvement in campaign and mission analysis modeling, Navy vulnerability to an Electromagnetic Pulse (EMP) attack, S&T required to bringing non-lethal ship stopping technologies to the Fleet, and finding game-changing technologies to target long-range S&T investments. Presented gaps in areas of future warfighting capability that need to be improved using technology in order to help force long range S&T planning.
- Science Advisor, Fleet Anti-Submarine Warfare Command (FLTASW), participated in defining the investment plan and associated risks for a \$500 million program to develop the next generation Anti-Submarine Warfare sensors. Developed performance objectives for a Naval Mine and Anti-Submarine Warfare (NMAWC)/Third Fleet (C3F) lead Military Utility Assessment (MUA) of the Deployable Autonomous Distributed System (DADS) program. Briefed the technologies, risks, near term development and experimentation plans for ASW Distributed Netted Systems (DNS) to COMTHIRDFLT.

## **FY 2007 Plans:**

Continue FY 06 efforts with 24 Science Advisors.

## **FY 2008 Plans:**

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>Systems assigned to this project are to be used by commanders and their staffs to process, fuse, and tailor information to assist decision-making and enhance situational awareness. They will integrate and share information from sources both internal and external to the Marine Air-Ground Task Force (MAGTF) to provide a shared understanding of the battlespace. Maneuver Command and Control (C2) is the executive layer of decision support that retrieves and fuses information from functional areas. It provides an integrated representation of the battlespace or a specific area of concern. The subprojects below develop systems that report unit status and location to the Tactical Combat Operations (TCO) System, and disseminate maneuver information throughout the battlespace.</p> <p><b>Advanced Field Artillery Tactical Data System (AFATDS)</b> - Consists of fire support Command and Control C2 software fielded on Marine Corps common hardware. AFATDS provides the MAGTF with the ability to rapidly integrate all supporting arms assets into maneuver plans via a digital link utilizing currently fielded communications equipment. AFATDS automates the fire planning, tactical fire direction, and fire support coordination required to support maneuver from the sea and subsequent operations ashore. The AFATDS program includes AFATDS software and hardware, the Effects Management Tool (EMT) (a C2PC injector), the Back-up Computer System (BUCS), and the Battery Maneuver Tactical Shelter (MTS).</p> <p><b>MAGTF Software Baseline (MSBL)/ Command and Control Personal Computer (C2PC).</b> MSBL/C2PC is the software backbone of all ground command and control in the Marine Corps; it is the primary means of integrating blue force tracking, fires, maneuver and intelligence capabilities in Command Operations Centers; is the ground C2 capability in the MAGTF C2 initiative; is the key to Joint interoperability with other Services and between CoComs; and integrates air data links from the Common Aviation Command and Control System to provide an integrated air-ground digital picture for commanders. MSBL/C2PC is an evolutionary acquisition program that is in a constant R&amp;D spiral necessary to remain interoperable with other Services and stay abreast of emerging Joint C4I requirements and standards, while also executing an aggressive life cycle support program for fielded capability throughout the Marine Corps. There are two separate but interrelated baselines of software development and support. The Common Operating Environment (COE) Unix baseline, which is Unix based server systems and the C2PC baseline which is a Windows based tactical workstations/system used at the company and above levels. A "light" version of C2PC has also been developed and fielded (C2CE) for hand-held for tactical workstations/systems used at the platoon and below level.</p> <p>The <b>Common Aviation Command and Control System (CAC2S) (CAC2S FUNDING WILL BE A PART OF MAGTF C2 IN FY2010)</b> will provide a common baseline of equipment, computer hardware, and software required to perform the mission of the Marine Air Command and Control System (MACCS). CAC2S will provide a capability that allows operators to integrate Marine aviation into joint and combined air/ground operations. CAC2S will be an open architecture system. CAC2S will provide the software integration to ground C2 via Command and Control Personal Computer (C2PC) functionality in order to improve air and ground situational awareness, blue force tracking and reduce the potential for fratricide.</p> <p><b>Tactical Command Operations (TCO)</b> will provide systems to the command post which support Maneuver C2. Maneuver C2 is the executive layer of decision support that pulls and fuses information from other functional areas.</p> <p><b>Target Location Designation and Hand-Off System (TLDHS) Block II</b> - Provides the ability for Forward Observers (FOs) and Forward Air Controllers (FACs) to: observe their area of interest, quickly and accurately locate ground targets, receive and display Blue Force Situational Awareness information and Fire Support Coordination Measures (FSCMs) on map displays interfaced with C2PC. TLDHS can digitally request and provide digital terminal control for target engagements by field artillery (FA) through AFATDS, close air support (CAS) aircraft, and naval surface fire support (NSFS), and the machine-to-machine interface of the system reduces the potential for fratricide due to human error and by displaying friendly positions and target locations to the terminal controller. TLDHS Block II also provides the capability to designate targets for laser-guided munitions and laser spot trackers. TLDHS Block II is comprised of and integrates two major subsystems: the Targeting Subsystem and the Target Hand-Off Subsystem. USMC MS C for TLDHS Block II was June 2005 and the Fielding Decision was June 2006.</p>									

EXHIBIT R-2a, RDT&E Project Justification		DATE:			
		<b>February 2007</b>			
APPROPRIATION/BUDGET ACTIVITY	PROGRAM ELEMENT NUMBER AND NAME	PROJECT NUMBER AND NAME			
RDT&E, N/BA-7 Operational Systems Development	0206313M Marine Corps Communications Systems	C2270 Command Post Systems			
<p><b>Marine Air Ground Task Force, Command and Control (MAGTF C2) Systems Applications</b> -Marine Air Ground Task Force C2 (MAGTF C2) is a holistic end-to-end MAGTF C2 transformation across all the MAGTF elements - Air Combat Element (ACE), Ground Combat Element (GCE), INTEL, &amp; Combat Service Support Element (CSSE). It enhances lethality and effectiveness across the range of military operations through better decision making and shared understanding. MAGTF C2 enables network-centric operations throughout the MAGTF and empowers the initiative of warfighters at all levels command by harnessing the synergy of commanders interest and enabling technology.</p> <p><b>Blue Force Situational Awareness (BFSA)+A4</b> is the Marine Corps' Situational Awareness family of systems comprised of the Mounted and Dismounted variants of terrestrial (EPLRS/SINGARS) systems, and the mounted celestial (SATCOM) system.</p> <p><b>Data Automated Communications Terminal (DACT)</b> The Data Automated Communications Terminal (DACT) is the Marine Corps' Blue Force Tracking Program of Record. It is the primary source of all tactical ground tracks below the Marine battalion, and is the primary provider of Position Location Information (PLI) into the Combat Operations Center (COC) and to Joint forces viewing the Common Operational Picture (COP). DACT is one tool in the Joint Combat ID toolbox that the Marine Commander uses to reduce the potential for fratricide.</p> <p>The <b>Mounted Data Automated Communication Terminal (M-DACT)</b> (IOC 2nd Qtr FY03) consists of the Ruggedized Handheld Computer (RHC) with Command and Control Personal Computer (C2PC) software integrated with various tactical vehicle platforms and communications systems through the use of a Vehicle Modification (VM) Kit. It is mounted in vehicles from the battalion to the mechanized platoon (HMMWV, AAV, LAV, and Tanks).</p> <p>The <b>Dismounted Data Automated Communications Terminal (D-DACT)</b> (IOC 2nd Qtr FY05) is a smaller, lighter handheld device having greater battery life, consisting of the Rugged Personal Digital Assistant (R-PDA) and Control CE (C2CE) software. The Dismounted DACT is intended for the dismounted user at the platoon level. Future DACT improved capabilities for replacement systems will meet stipulated Operational Requirements and OIF-derived Requirements to provide Blue Force Tracking and automated communications support for commanders in tactical operations. New capabilities will include Non Line of Sight (NLOS) and enhanced communication paths; improved Graphic User Interface (GUI) software, a larger screen, and Selective Availability Anti-Spoofing Module (SAASM) GPS integration.</p> <p><b>Blue Force Tracker (BFT)</b> The BFT System is a satellite-based Tracking and Communication System. BFT provides the capability to identify position, track progress, and communicate with the operators of tactical wheeled vehicles. It is intended to provide real-time, in-transit visibility of vehicles and cargo within a theater of operation. The BFT is employed to the battalion level to provide operational commanders with USMC/Army Position Location Information within the area of operations.</p>

<p><b>(U) D. ACQUISITION STRATEGY:</b></p> <p><b>(U) TLDHS:</b> The acquisition of components (software/hardware) for the TLDHS initiative will maximize the use of existing COTS, GOTS, NDI and GFE. Software development is conducted utilizing a sole source small-business contract.</p> <p><b>(U) AFATDS:</b> AFATDS is a Cost Plus Award Fee contract through Army CECOM, Ft. Monmouth, NJ. R&amp;D efforts will be a combined effort between the software developer (Raytheon), the Army PM and the USMC of software enhancements for the next planned versions of AFATDS.</p> <p><b>(U) MSBL/C2PC:</b> Funds applied to a CPIF contract with Northrop Grumman Mission Systems, San Diego, CA for development of MSBL client in MS Windows environment and development of client for foot mobile Marines in Windows environment. Funds applied to Titan Corporation, Dumfries, VA and OSEC, Stafford, VA under the CEOSS contract for program management and engineering support. Funds applied to SPAWAR, Charleston, SC to integrate applications, injectors and services, and to conduct independent verification and validation of MSBL, C2PC, C2CE and the integrated IOW and Joint Tactical COP Workstation builds.</p> <p><b>(U) TCO:</b> Contracting is done with various vendors for software test and integration, COTS evaluation and documentation. The PMO conducts quarterly performance reviews.</p> <p><b>(U) MAGTF C2:</b> Spiraled development of capabilities. Spiral development cycle is 2 years. Spiral 1 Initial Operational Capability (IOC) in 2010 has the following capabilities attributes: Single integrated air and ground picture; full real time to near real time, and non real time data exchange; integrated fire control. Spiral 2 IOC in 2012 has the following capabilities attributes: Single integrated air, ground, and Intel picture; full real time, near real time, and non real time data exchange. Spiral 3 IOC in 2014 and has the following capabilities attributes: Full integrated tactical air, ground, Intel, and CSSE display and integrated data environment. Each spiral will be accepted as an integrated whole, running on the target hardware, following a contractor development test.</p> <p><b>(U) DACT:</b> The Program develops software and hardware for two operational domains. The Mounted DACT (M-DACT) (IOC 2nd Qtr FY03) consists of the Ruggedized Handheld Computer (RHC) with Command and Control Personal Computer (C2PC) software integrated with various tactical vehicle platforms and communications systems through the use of a Vehicle Modification (VM) Kit. It is mounted in vehicles from the battalion to the mechanized platoon (HMMWV, AAV, LAV, and Tanks). The acquisition objective of 1074 systems has been procured. The Dismounted DACT (D-DACT) (IOC 2nd Qtr FY05) is a smaller, lighter handheld device having greater battery life, consisting of the Rugged Personal Digital Assistant (R-PDA) with Windows Command and Control CE (C2CE) software. The Dismounted DACT is intended for the dismounted user at the platoon level. 1108 systems of the acquisition objective of 1944 have been procured.</p> <p><b>(U) E. MAJOR PERFORMERS:</b></p> <p><b>TARGET LOCATION DESIGNATION AND HAND-OFF SYSTEM (TLDHS)</b></p> <table border="0"> <tr> <td>FY06</td> <td>Stauder Technologies</td> <td>St Louis MI</td> <td>T&amp;E</td> </tr> <tr> <td>FY07</td> <td>Stauder Technologies</td> <td>St Louis MI</td> <td>T&amp;E</td> </tr> <tr> <td>FY08</td> <td>Stauder Technologies</td> <td>St Louis MI</td> <td>T&amp;E</td> </tr> <tr> <td>FY09</td> <td>Stauder Technologies</td> <td>St Louis MI</td> <td>T&amp;E</td> </tr> </table>			FY06	Stauder Technologies	St Louis MI	T&E	FY07	Stauder Technologies	St Louis MI	T&E	FY08	Stauder Technologies	St Louis MI	T&E	FY09	Stauder Technologies	St Louis MI	T&E

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

(U) Intelligence Command and Control (C2) supports the employment of reconnaissance, surveillance, and target acquisition resources and the timely planning and processing of all-source intelligence. It ensures that all-source tactical intelligence is tailored to meet specific mission requirements. The systems below collect and convert raw intelligence data on the battlefield into processed information and deliver the processed products to the Intelligence Analysis Systems (IAS) for analysis and dissemination.

**Tactical Exploitation of National Capabilities (TENCAP)** is a program designed to enhance the ability of tactical Marine Corps forces to exploit the capabilities of national intelligence-gathering systems. Congressionally directed, it requires close liaison with the intelligence community and involves complex and highly-sensitive activities.

**Topographic Production Capability (TPC)** is an integrated, independently deployed, self-contained terrain analysis system designed for data acquisition, manipulation, analysis and output, providing commanders and staff with geospatial intelligence (GEOINT) support at the Marine Expeditionary Force (MEF) and the Marine Expeditionary Wing (MEW) levels. The TPC configurations consist of Commercial-off-the-Shelf (COTS)/Government-off-the-Shelf(GOTS) software packages, servers, workstations, large-format printing/plotting devices and large-format scanning devices, all mounted in transit cases. The TPC provides critical, timely, and accurate digital and hardcopy geospatial information to support mission planning and execution. The TPC provides the capability to collect, process, exploit, analyze, produce, disseminate, and use all-source geospatial information as a foundation for a Common Operational Picture (COP) for the Marine Air Ground Task Force (MAGTF) Commander. The TPC is used by the Topographic Platoon of the MEF and provides deployable modules down to the Major Subordinate Command (MSC) and the Marine Expeditionary Unit (MEU). It supports the Commander, Joint Task Force or Marine Component Commander. The TPC provides the frame work data collection, analysis and integration; and decision-aid development support.

**Joint Surveillance Target Attack Radar (JSTARS)** connectivity program will research and integrate a client software connectivity solution which will allow the JSTARS Moving Target Indicator (MTI), Fixed Target Indication (FTI) and Synthetic Aperture Radar (SAR) data to be passed from the JSTARS Common Ground Station (CGS) to lower echelons within the MAGTF. Additionally, The Marine Corps will continue future MTI, CDL and MTI sensor capabilities and Internet Protocol Version 6 (IPv6) research and development .

**Tactical Exploitation Group (TEG)** - The TEG System is the only tactical imagery exploitation system in the United States Marine Corps (USMC) and is one of the four systems comprising the Distributed Common Ground\Surface System-Marine Corp (DCGS-MC). The modular and scaleable TEG employs a tiered approach comprised of two echelon-tailored configurations: the TEG-Main (TEG-M) and the TEG Remote Workstation (TEG-RWS). The TEG-M receives and processes national, theater, and tactical imagery and supplies the commander and subordinate commanders with exploitation reports and secondary imagery products for tactical operations, strike planning, precision targeting, detection and location of targets of opportunity, and battle damage assessment for restrike planning and intelligence assessment. The TEG-RWS provides imagery support to subordinate units within the MEF that do not require full TEG-M support. The TEG is also interoperable with the Army's Tactical Exploitation System (TES), the USAF Intelligence Systems Reconnaissance Manager (ISRM), the DCGS-Navy (DCGS-N) and other USMC C4I systems.

**Counterintelligence (CI) and Human Intelligence (HUMINT) Equipment Program (CIHEP)** provides the MAGTF with integrated, standardized, and interoperable information (automated data processing), communication, and specialized equipment to conduct the full spectrum of tactical CI/Force Protection to include Irregular Warfare, HUMINT, and technical collection operations in accordance with (IAW) applicable national oversight directives. CIHEP provides each CI/HUMINT Company (CIHCo) with a suite of state-of-the-market equipment comprised of commercial-off-the-shelf, government-off-the-shelf, and non-developmental items (COTS/GOTS/NDI). It integrates audio, video, imagery, communications, technical surveillance and computer equipment into lightweight, modular, scalable, deployable packages. CIHEP enhances the capability to collect, receive, process, and disseminate CI/HUMINT information from overt, sensitive, technical, tactical, and Force Protection, in the service, joint, and combined forces area of operations.

APPROPRIATION/BUDGET ACTIVITY

PROGRAM ELEMENT NUMBER AND NAME

PROJECT NUMBER AND NAME

**RDT&E, N /BA-7 Operational Sys Dev**

**0206313M Marine Corps Communication Systems**

**C2272 Intelligence C2 Systems**

**Team Portable Collection System - Multi-Platform Capable (TPCS-MPC)** - The TPCS- MPC will provide the MAGTF commander with a modular and scaleable carry on/off suite of equipment capable of conducting Signals Intelligence (SIGINT) operations onboard organic non-dedicated Marine Corps air, ground, and water borne platforms. The TPCS-MPC will be highly modular, mission configurable, multi-platform system incorporating plug-and-play technologies. The system will provide state-of-the-art, versatile air/ground/water borne Signals Intelligence (SIGINT) and Electronic Warfare (EW) support to the MAGTF through the use of lightweight, flexible mission equipment suites capable of detecting, identifying, locating, and exploiting current and emerging communications technologies, intercepting non-communication signals, and improving the system's geolocation accuracy.

**Tactical Remote Sensor System (TRSS-PIP)** - TRSS is a suite of hand emplaced and air-delivered unattended sensors, ground relays, and sensor monitoring stations, which are used by the Intelligence Battalions, Ground Sensor Platoons (GSPs). It provides the MEF/MAGTF Commander with an organic capability to conduct unattended, all-weather, semi-covert, ground surveillance of distant areas within his Area of Operations (AO). Through the use of seismic, acoustic, magnetic, infra-red, and imaging sensors, this suite provides an additional surveillance capability of personnel and/or vehicular activity, during tactical pre-assault, assault and post assault operations. TRSS covers gaps in the overall intelligence collection effort and reduces the requirement to employ Marines behind enemy lines for extended periods of time.

**MAGTF Secondary Imagery Dissemination System (MSIDS)** is the only ground prospective Family of Systems (FoS) that provides organic tactical digital imagery collection, transmission and receiving capability to the MAGTF Commander. MSIDS is comprised of components necessary to enable Marines to capture, manipulate, annotate, transmit or receive images in Near Real Time (NRT), internally with subordinate commands that are widely separated throughout the area of operations and externally with high adjacent commands. MSIDS capability resides with the MAGTF G/S-2 sections and Ground Reconnaissance units. The MSIDS FoS extends the digital imaging capability to all echelons within the MEF, down to and including battalions and squadrons. Captured images are capable of being forwarded throughout the MAGTF through the use of Base Station Workstation/Communication Interface (OW/CI) or existing C4ISR architecture. MSIDS FoS is currently employed in every location world-wide where the Marine Corps participates in military operations to include Irregular Warfare. MSIDS is currently, or has recently, been employed in Iraq, Kuwait, Afghanistan, Haiti, Philippines, and Horn of Africa.

**Intelligence Analysis Systems (IAS)** supports the employment of reconnaissance, surveillance, and target acquisition resources and the timely planning and processing of all-source intelligence; it ensures that tactical intelligence is tailored to meet specific mission requirements to include Irregular Warfare.

**Global Command and Control System Integrated Imagery and Intelligence (GCCS I3)** is a joint program that is designed to enhance the operational Commander's situation awareness and track management through the use of a standard set of integrated, linked tools and services that maximize commonality and interoperability across the tactical theater, and national communities. GCCS-I3 operates in joint and service specific battlespace and is interoperable, transportable, and compliant with the DoD mandated Common Operating Environment (COE).

**Technical Control Analysis Center (TCAC).** The primary mission of the TCAC is to provide the Radio Battalions (RadBn) with an automated Signals Intelligence (SIGINT) processing, analysis, and reporting capability. The TCAC system is designed to receive collected intelligence from tactical, theater and National level producers and provide a multi-source fused intelligence production capability to support the Marine Air Ground Task Force (MAGTF) commander via the Intelligence Analysis System (IAS), as well as the National Security Agency (NSA) and other National consumers.

**Intelligence Broadcast Receiver (IBR)** provides Marine tactical commanders access to National level Near Real-Time intelligence data provided over the Integrated Broadcast Service. IBR is employed across the MAGTF echelons through the following Host Systems; Intelligence Analysis System; Tactical Air Operations Center; Technical Control and Analysis Center; Tactical Air Command Center; Joint STARS Common Ground Station; Tactical Electronic Reconnaissance Processing and Evaluation System and Common Air Command and Control Systems and Joint Stars Work Station.

**Intelligence System Readiness (ISR)** - provides timely and targeted solutions that enable the MAGTF Commander to accomplish the mission by rapid technology insertion, quick response training, logistics and provide interim support to mission essential legacy systems that are not otherwise supported through the POM process. By utilizing the Field User Evaluation (FUE) Process, the ISR program enhances the Marine Corps Intelligence Architecture by mitigating operational shortfalls through Commercial-Off-The-Shelf (COTS), Government-Off-The-Shelf (GOTS) and Non-Developmental Item (NDI) solutions. In this way, ISR provides proof-of-concept prototypes and focused Research and Development (R&D) efforts to support the Marine Corps Intelligence Architecture and shorten the time required to fill gaps and field systems. The ISR program Team also trains Marines to maximize new systems and capabilities.

**C2272 Intelligence C2 Systems**

**Trojan Spirit II** - Two programs TROJAN SPIRIT II and TROJAN SPIRIT LITE are merging into a single program called TROJAN SPIRIT. TROJAN SPIRIT is a SHF multi-band satellite communications terminal, available in either High Mobility Multi-Purpose Wheeled Vehicle (HMMWV)-mounted or transit case configuration, that provides dedicated tactical communications capacity at the TS/SCI and Secret Collateral levels to USMC intelligence units. TROJAN SPIRIT terminals provide connectivity into JWICS, NSANET and SIPRNET via the TROJAN Network Control Center.

**Distributed Common Ground/Surface System-Marine Corps (DCGS - MC)** - formerly known as Distributed Common Ground/Surface-Integration (DCGS-I), is a collection of Service Systems that will contribute to joint and combined warfighter needs for ISR support, with the Global Information Grid (GIG) providing unconstrained communications circa 2010 to support the Department of Defense (DoD) Intelligence, Sureveillance and Reconnaissance (ISR) Enterprise end-state. The DCGS Integrated Backbone (DIB) is the architecture that will tie the Service DCGS systems together into one Family of Systems (FOS). The DIB will provide the tools, standards, architecture, and documentation for the DCGS community to achieve a Multi-Intelligence (Multi-INT) (e.g. Imagery Intelligence (IMINT), Signal Intelligence (SIGINT), Measurement/Measuring and Signature Intelligence (MASINT), Counterintelligence/Human Intelligence (CI/HUMINT)), network centric environment with the interoperability to afford individual nodes' access to the information needed to execute their respective missions to include Irregular Warfare. The Marine Corps will conduct DIB integration reseach and development to meet a congressionally mandated implementation deadline.

**February 2007**

APPROPRIATION/BUDGET ACTIVITY

**RDT&E, N /BA-7 Operational Sys Dev**

PROGRAM ELEMENT NUMBER AND NAME

**0206313M Marine Corps Communication Systems**

PROJECT NUMBER AND NAME

**C2272 Intelligence C2 Systems**

**(U) Related RDT&E:**

(U) PE 0301301L (Department of Defense Intelligence and Information Systems/Military Intelligence Integrated Data System/Integrated Data Base I and II)

(U) PE 0604270A (Intelligence and Electronic Warfare Common Sensor (IEWCS), TACJAM-A)

(U) PE 0305885G (Tactical Cryptologic Program)

(U) PE 0603730A (Tactical Surveillance System - Advanced Development), Army TENCAP, Project D560

(U) PE 0603766A (Tactical Electronic Surveillance System - Advanced Development), Army TENCAP, Project D907

(U) PE 0604740A (Tactical Surveillance System - Engineering Development), OSD TENCAP, Project D662

(U) PE 0902398M (United States Special Operations Command), Chariot Program

(U) PE 0605867N (SEW Surveillance/Reconnaissance Support), Project Z1034

**(U) ACQUISITION STRATEGY JSTARS:** JSTARS will utilize ongoing Army and Navy JSTARS contracts for development of client software, future CDL, MTI and MTI Sensor capabilities. IPv6 research will be conducted in conjunction with other services and agencies. Incremental Development Plan (IDP) efforts will continue to the JSTARS software baseline. SPAWAR-Charleston, SC will oversee the integration and testing of these development efforts, ensuring USMC Command, Control, Communications, Computers and Intelligence (C4I) architecture capability. On-site contractor logistical support will be provided through the General Dynamics Intelligence, Information Command and Control, Equipment and Enhancements (ICE2) Equipment Logistics Support Contract out of Warner-Robbins Air Force Base, GA. Post Deployment Software Support (PDSS) will be provided through the Communications-Electronics Command (CECOM), Ft Monmouth, NJ and SPAWAR-Charleston, SC. Surveillance Control Data Link (SCDL) antenna and Ground Data Terminal (GDT) support will be through Cubic Defense Systems, San Diego, CA, via a General Dynamics support contract.

**(U) ACQUISITION STRATEGY JSIPS TEG:** The TEG Program Office leverages the advantages of its multi-service common software baseline and inherent Joint service interoperability. Development, integration, interoperability, security certification and accreditation and acquisition is divided between three prime contractors: Northrop Grumman Electronic Systems, Baltimore, MD (NGB) (through a classified contract); Space and Naval Warfare Systems Center, Charleston, SC (SSCC), and MTC Services Corporation. An incremental refresh is currently ongoing for the TEG/RWS. A subsequent refresh will occur in FY08 for the TEG-M in order to keep systems modern and modular to meet emerging technologies.

**(U) ACQUISITION STRATEGY TPCS:** TPCS, the ever-increasing sophistication of target threats and information technology necessitates an evolutionary acquisition approach. TPCS will make incremental improvements through maximum use of COTS, GOTS and NDI. These technology insertions and product improvements will ensure the Radio Battalions maintain cutting edge technologies and collection capabilities.

**(U) ACQUISITION STRATEGY TRSS:** The TRSS are typically Non-Developmental Item (NDI) integration efforts, making maximum use of the efforts of hardware and software initially developed by other DoD organizations and programs. The initial phases of each Increments are cost-plus fixed-fee efforts, while the production phase, which encompasses the production, fielding, training and initial support of the systems, are firm-fixed price efforts.

**(U) ACQUISITION STRATEGY TENCAP:** Work will be led in-house. Necessary contractor support will be acquired using already existing contracts.

**(U) ACQUISITION STRATEGY CIHEP:** CIHEP will use existing 8A contractor, Action Systems, the developer of the original system for test, evaluation and integration of planned refresh items for the ADP and Imagery Module. US Army IMA will be used for test, evaluation, and integration of planned refresh items for the TSS, Audio and Miscellaneous modules. CIHEP will coordinate acquisitions of communications equipment with PM Comm for planned upgrades to the Communications Module.

**(U) ACQUISITION STRATEGY MSIDS:** A complete refresh of systems commenced in 3QTR FY02 and reached Full Operational Capability (FOC) in 2QTR FY03. Subsequent "increment refreshes" are under way in order to keep the systems from becoming unreliable and unsupported. The increment refresh approach will effectively leverage technological advances. Each increment of upgrades will refresh 1/3 of the fielded components.

**UNCLASSIFIED**

<b>EXHIBIT R-2a, RDT&amp;E Project Justification</b>		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N /BA-7 Operational Sys Dev</b>	PROGRAM ELEMENT NUMBER AND NAME <b>0206313M Marine Corps Communication Systems</b>	PROJECT NUMBER AND NAME <b>C2272 Intelligence C2 Systems</b>
<p><b>(U) ACQUISITION STRATEGY GCCS-I3:</b> This program promotes and ensures interoperability among USMC Intelligence Systems. Engineering and technical support is provided to PM Intel systems integration efforts for incorporation of the COE and GCCS-I3 software baseline. An Intelligence Integration Facility has been established at the Integrated Team Solution Facility. As such, this facility will be used as the hub for the entire integration effort of the GCCS-I3 initiative.</p> <p><b>(U) ACQUISITION STRATEGY TCAC:</b> The acquisition of components for the TCAC will maximize the use of existing equipment, NDI/COTS/GFE equipment/software. The integration effort for TCAC hardware components will be accomplished under the control of the SSA, MCSC. Software integration and support will be accomplished by contractors under the control of the Project Officer. These activities report to and are directed by the Program Manager, Intelligence Systems, Marine Corps Systems Command (MARCORSYSCOM). Maintenance support will be managed by MARCORLOGBASES Albany and MCSC, Albany and through separate contractual agreements.</p> <p><b>(U) ACQUISITION STRATEGY IBR:</b> In house contracts will be used to conduct engineering studies and test and evaluation activities associated with the Marine Corps implementation of the Integrated Broadcast Service, Common Message Format, ENTR integration and test and evaluation.</p> <p><b>(U) ACQUISITION STRATEGY TPC:</b> The TPC program will reach Full Operational Capability in FY06 with the fielding of TPC to the Marine Corp Intelligence Activity. The TPC will refresh and upgrade the existing TPC equipment as technology advances. As new technology emerges, the current fielded systems will need incremental hardware and software refreshes to sustain operational requirements and to meet the ORD requirement of compliance with the NGA US Imagery and Geospatial Information System. The TPC program uses existing Government contracts for hardware/software development and integration. Full-time contractor support is provided through the Commercial Enterprise Omnibus Support Services (CEOs) contract. Additional full time engineering and integration support is provided by Northrop Grumman Information Technology TASC through the Information Technology Omnibus Procurement II (ITOP II) contract under the auspices of the MCSC Information Technology Modernization 2000 (ITM2K) Project Office. Maintenance support will be managed by MARCORLOGBASES Albany and MCSC, Albany and through separate contractual agreements.</p> <p><b>(U) ACQUISITION STRATEGY ISR:</b> This program seeks to support a wide range of technology solutions based on the requests received from the Operating Forces and/or PM Intelligence Program of Record. The request must require solution evaluation beyond merely acquisition to be recommended as an ISR candidate. Each request will be validated by the ISR team and approved by the Project Officer and PM Intel before solution evaluation begins. The ISR program will use COTS/GOTS/NDI solutions to the greatest extent possible.</p> <p><b>(U) ACQUISITION STRATEGY IAS:</b> The IAS program uses existing Government contracts for hardware and software development and integration. The system is comprised primarily of Commercial Off-the-Shelf (COTS) and Government Off-The-Shelf (GOTS) equipment. The IAS FoS utilizes an evolutionary strategy to ensure periodic incorporation of state-of-the-art technology that meets both current and future Marine Corps intelligence requirements while maintaining system readiness and reliability.</p> <p><b>(U) ACQUISITION STRATEGY TROJAN SPIRIT:</b> Procure and continuously improve USMC TROJAN SPIRIT systems to meet evolving Marine Corps operational needs while maintaining interoperability with the Army TROJAN Network and maintaining, as closely as practical, configuration common to the Army TROJAN SPIRIT systems.</p> <p><b>(U) ACQUISITION STRATEGY DCGS-MC:</b> The Marine Corps DCGS-MC project officer will leverage off of the USAF DCGS 10.2 Research, Development Test and Evaluation (RDT&amp;E) effort and focus on the development of the DCGS Integrated Backbone (DIB) for the DCGS-MC. Additionally, the DCGS-MC will leverage off of MAGTF Legacy system DIB compliancy efforts.</p>

PROJECT NUMBER AND NAME

**C2272 Intelligence C2 Systems**

**(U) E. MAJOR PERFORMERS:**

**MANPACK SIDS (MP SIDS)**

- FY 06 Navy Systems Management Activity (MTC, Stafford, VA). Provide funds for engineering and program management support.
- FY 07 Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for engineering and program management support.
- FY 08 Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for engineering and program management support.
- FY 09 Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for engineering and program management support.

**INTELLIGENCE BROADCAST RECEIVER (IBR)**

- FY 06 SPAWAR, Provide engineering support for the ISR Testing and Training Center NSMA (MTC), Stafford, VA. Provide contract and program support.
- FY 07 SPAWAR, Provide engineering support for the ISR Testing and Training Center NSMA (MTC), Stafford, VA. Provide contract and program support.
- FY 09 SPAWAR, Provide engineering support for the ISR Testing and Training Center

**INTELLIGENCE ANALYSIS SYSTEM (IAS)**

- FY06 SPAWAR, CHARLESTON, S.C. Provide funds for development, upgrades, integration, research and analysis of hardware for system refresh. Navy Systems Management Activity (MTC, Stafford, VA). Provide funds for Integration and hardware upgrade study.
- FY07 SPAWAR, CHARLESTON, S.C. Continue to provide funds for development, upgrades, integration, research and analysis of hardware for system refresh. Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for Integration and hardware upgrade study.
- FY08 SPAWAR, CHARLESTON, S.C. Continue to provide funds for development, upgrades, integration, research and analysis of hardware for system refresh. Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for Integration and hardware upgrade study.
- FY09 SPAWAR, CHARLESTON, S.C. Continue to provide funds for development, upgrades, integration, research and analysis of hardware for system refresh. Navy Systems Management Activity (MTC, Stafford, VA). Continue to provide funds for Integration and hardware upgrade study.

**INTELLIGENCE SYSTEM READINESS (ISR)**

- FY06 SPAWAR, CHARLESTON, S.C. Provide funds for engineering, testing, evaluation and training support.
- FY07 SPAWAR, CHARLESTON, S.C. Continue to provide funds for engineering, testing, evaluation and training support.
- FY08 SPAWAR, CHARLESTON, S.C. Continue to provide funds for engineering, testing, evaluation and training support.
- FY09 SPAWAR, CHARLESTON, S.C. Continue to provide funds for engineering, testing, evaluation and training support.

**TEAM PORTABLE COLLECTION SYSTEM - MULTI-PLATFORM CAPABLE (TPCS-MPC)**

- FY06 SPAWAR, CHARLESTON, S.C. Provide funds for prime systems integrator for TPCS-MPC EDM.  
MCOTEA. Provide Operational testing of the TPCS-MPC Ground/Team system.  
NSMA (MTC), Stafford, VA, Provide funds for program management and engineering support services
- FY07 SPAWAR, CHARLESTON, S.C. Continue to provide funds for prime systems integrator for TPCS-MPC EDM.  
MCOTEA. Provide Operational testing of the TPCS-MPC Ground/Team system.  
NSMA (MTC), Stafford, VA, Continue to provide funds for program management and engineering support services
- FY08 SPAWAR, CHARLESTON, S.C. Continue to provide funds for prime systems integrator for TPCS-MPC EDM.  
MCOTEA. Provide Operational testing of the TPCS-MPC Ground/Team system.  
NSMA (MTC), Stafford, VA, Continue to provide funds for program management and engineering support services
- FY09 SPAWAR, CHARLESTON, S.C. Continue to provide funds for prime systems integrator for TPCS-MPC EDM.  
NSMA (MTC), Stafford, VA, Continue to provide funds for program management and engineering support services

**GLOBAL COMMAND AND CONTROL SYSTEM INTEGRATED IMAGERY AND INTELLIGENCE (GCCS I3)**

- FY 06 Navy Systems Management Activity (NSMA), MTC Services Corporation (MTC) Stafford, VA. Provide funds for Engineering and Program support services.  
SPAWAR, CHARLESTON, SC. Development, upgrades, integration, research and analysis for system refresh.
- FY 07 Navy Systems Management Activity (NSMA),MTC Services Corporation (MTC) Stafford, VA. Continue to provide funds for Engineering and Program support services.  
SPAWAR, Charleston, SC. Continue development, upgrades, integration, research and analysis for system refresh.
- FY 08 Navy Systems Management Activity (NSMA),MTC Services Corporation (MTC) Stafford, VA. Continue to provide funds for Engineering and Program support services.  
SPAWAR, CHARLESTON, SC. Continue development, upgrades, integration, research and analysis for system refresh.
- FY 09 Navy Systems Management Activity (NSMA),MTC Services Corporation (MTC) Stafford, VA. Continue to provide funds for Engineering and Program support services.  
SPAWAR, Charleston, SC. Continue development, upgrades, integration, research and analysis for system refresh.

**TOPOGRAPHIC PRODUCTION CAPABILITY (TPC)**

- FY 06 MARCORSSYSCOM, (MCSC), Quantico, VA Provide funds to TBD for continues integration and re-engineering support in support of moderinzation and technology refresh.  
NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), (MTC, Stafford, VA ), Provide funds for engineering & technical management support.
- FY 07 MARCORSSYSCOM, (MCSC), Quantico, VA Continue to provide funds to TBD for continues integration and re-engineering support in support of moderinzation and technology refresh.  
NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), (MTC, Stafford, VA ), Continue to provide funds for engineering & technical management support.
- FY 08 MARCORSSYSCOM, (MCSC), Quantico, VA Continue to provide funds to TBD for continues integration and re-engineering support in support of moderinzation and technology refresh.  
NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), (MTC, Stafford, VA ), Continue to provide funds for engineering & technical management support.

FY06 NAWCWD.

MARCORSYSCOM, Quantico, VA. Funds provided to CEOss for ALA and Engineering support.

OCEAN SYSTEMS ENGINEERING CORP. (OSEC), San Diego, CA. Funds provided software development AADS and UGMS.

FY07 NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), Crystal City, VA. Continue to provide for engineering and integration support.

MARCORSYSCOM, Quantico, VA. Continue to provided Engineering support.

OCEAN SYSTEMS ENGINEERING CORP. (OSEC), San Diego, CA. Continue to provided for software development of Increment III efforts MCOTEA

FY08 NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), Crystal City, VA. Continue to provided for engineering and integration support.

FY09 NAVY SYSTEMS MANAGEMENT ACTIVITY (NSMA), Crystal City, VA. Continue to provided for engineering and integration support.

**COUNTERINTELLIGENCE AND HUMAN INTELLIGENCE (HUMINT) EQUIPMENT PROGRAM (CIHEP)**

FY06/FY07 MARCORSYSCOM (MCSC), Quantico, VA. Provide program management support for tech refresh and upgrade of program hardware and software.

FY06/FY07/FY08/FY09 NSMA, MTC, Stafford, VA - Provided for Pgm Mgmt support for tech refresh and upgrade of program hardware and software.

FY06/FY07 ACTION SYSTEMS, Las Cruces, NM. Provide engineering, integration and technical support for tech refresh and upgrade of program hardware and software.

**TROJAN SPIRIT**

FY06 NSMA, MTC Stafford, VA - Provide funds for P3I prototype, technical and Engineering support to include EOA, DT and OT.

FY07 NSMA, MTC Stafford, VA - Continue to provide funds for P3I prototype, technical and Engineering support.

FY08 NSMA, MTC Stafford, VA - Continue to provide funds for P3I prototype, technical and Engineering support for P3I prototype, technical and Engineering support to include EOA, DT and OT.

FY09 NSMA, MTC Stafford, VA - Continue to provide funds for P3I prototype, technical and Engineering support.

**DCGS-I**

FY06 USAF 10.2 Contract. Research and development of DCGS Integrated Backbone (DIB) software and integration into Marine Corps legacy systems.

NSMA, MTC, Stafford, VA Integrated Teams Solution Facility, Stafford, VA Provide Engineering & technical services, studies, analysis and evaluation for DIB integration, and integration support. FY07

NSMA, MTC, Stafford, VA Integrated Teams Solution Facility, Stafford, VA Continue to provide Engineering & technical services, studies, analysis and evaluation for DIB integration, and integration support.

FY08 NSMA, MTC, Stafford, VA Integrated Teams Solution Facility, Stafford, VA Continue to provide Engineering & technical services, studies, analysis and evaluation for DIB integration, and integration support.

FY09 NSMA, MTC, Stafford, VA Integrated Teams Solution Facility, Stafford, VA Continue to provide Engineering & technical services, studies, analysis and evaluation for DIB integration,

<p>(U) A. <b>MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>(U) <b>Air Operations Command &amp; Control C2</b> coordinates and plans Navy and Marine air combat operations and interfaces with joint and combined forces air operations. It also interfaces with fire support C2. The systems in this project are used to detect aircraft and missiles, process the detected information, deliver the processed information to the Advanced Tactical Air Command Central (ATACC), and conduct the air battle.</p> <p>The <b>Common Aviation Command and Control System (CAC2S)</b> will provide a common baseline of equipment, computer hardware, and software required to perform the mission of the Marine Air Command and Control System (MACCS). CAC2S will provide a capability that allows operators to integrate Marine aviation into joint and combined air/ground operations. CAC2S will be an open architecture system. CAC2S will provide the software integration to ground C2 via Command and Control Personal Computer (C2PC) functionality in order to improve air and ground situational awareness, blue force tracking and reduce the potential for fratricide.</p> <p>The <b>Composite Tracking Network (CTN)</b> will provide the Marine Air Ground Task Force MAGTF Commander a ground based sensor netting solution that significantly improves situational awareness by correlating sensor measurement data (target position, speed, heading, Identification Friend and Foe (IFF), etc.) from local and remote radars in the Cooperative Engagement Capability (CEC) network, which is then provided to the warfighter in the form of composite, real-time, air surveillance tracks.</p> <p>The <b>Joint Combat Identification Evaluation Team (JCIET)</b> is a superb opportunity to conduct quality assurance testing of service's systems operating in a Joint environment. It conducts assessments in a number of venues including : Military Operations in Urban Terrain (MOUT) exercises, Advanced Concept Technology Demos (ACTD), Joint Training exercises, Combined Armed Training Exercises (CAXs) and Weapons Tactics Instruction Events (WTIs). Its mission is to improve Tactics, Techniques and Procedures (TTP) across all Combat Identification mission areas. (It is not an acquisition program; therefore it does not have specific milestone dates.)</p> <p>The <b>Marine Air Command and Control System (MACCS) Sustainment</b> consists of various command and control agencies designed to provide the Aviation Combat Element (ACE) commander with the ability to monitor, supervise and influence the application of Marine aviation assets in support of MAGTF operations. The MACCS Sustainment provides funding to keep these fielded systems ready, relevant and capable until their functions are replaced by the Common Aviation Command and Control System (CAC2S).</p> <p><b>Single Integrated Air Picture (SIAP)</b> is the product of fused, common, continual, unambiguous tracks of airborne objects within the surveillance area." The SIAP Systems Engineer Organization (JSSEO) will identify the most effective and efficient means to achieve a SIAP that satisfies the warfighter needs. The Joint Single Integrated Air Picture Systems Engineering Organization (JSSEO) is not limited to just material solutions in this effort; all aspects will be considered to produce the SIAP, including tactics, techniques and procedures and changes to Service operations.</p> <p><b>Theater Battle Management Core Systems (TBMCS)</b> provides the commander the automated tools necessary to generate, disseminate, and execute the Air Tasking Order (ATO), as mandated by the Chairman, Joint Chiefs of Staff in July 1993. It is an evolutionary acquisition, allowing for the rapid development/fielding of hardware and software to meet today's rapidly advancing technology. It is fielded to all four Marine Tactical Air Command Squadrons (MTACS) and the supporting establishment.</p>									

EXHIBIT R-2a, RDT&E Project Justification		DATE: <b>February 2007</b>			
APPROPRIATION/BUDGET ACTIVITY	PROGRAM ELEMENT NUMBER AND NAME	PROJECT NUMBER AND NAME			
<b>RDT&amp;E, N /BA-7 Operational Systems Development</b>	<b>0206313M Marine Corps Communications Systems</b>	<b>C2273 Air Operations C2 Systems</b>			
<p><b>Battlefield Target Identification Device (BTID)</b> in FY08 and beyond - will be a cooperative battlefield target identification device that employs encrypted, Ka band, millimeter wave, question and answer technology. It will consist of interrogator and transponder antennae, transceiver, and communications/electrical interface unit. It will be fielded as two variants: interrogator/transponder system for Expeditionary Fighting Vehicle (EFVs), Light Amphibious Vehicles (LAVs), and M1A1s; and transponder-only system for combat support and combat service support vehicles. When fielded, mounted weapon systems will have the capability to identify targets as friendly or unknown, at ranges to 6 km, before engaging them. They and all other designated vehicles will also possess the capability to rapidly identify themselves as friendly to weapon systems equipped with comparable systems prior to being engaged. As a result, incidents of fratricide and collateral damage will decline, while the range at which targets may be engaged without fear of misidentification will increase dramatically. The system will be interoperable with Joint, Allied, and Coalition forces' cooperative target identification systems.</p> <p>Small Unit Remote Scouting System (SURSS) - The SURSS program is a family of small tactical sensors for the Marine Company and Battalion. When fully fielded it will consist of an aerial sensor, hand-emplaced and munitions sensor controlled by a common ground control station. The current budget provides funding for the aerial sensor. Funding for FY06 and FY07 SURSS resides in C1901 P.E. 0206623M.</p> <p>The Combat Operations Center (COC) is a deployable, self-contained, and centralized facility which provides digital, shared Command and Control/Situational Awareness functionalities to enhance the Common Operational Picture (COP) for the Command Element, Ground Command Element, Air Combat Element, and Combat Service Support Element. It is a commercial-off-the-shelf based, total turn-key, integrated hardware solution using unit provided radios, legacy, re-hosted tactical data systems, and available prime movers that provides the Marine mobility, modularity and scalability.</p> <p>This is a combined Navy (PE#0207257N) and Marine Corps (PE#0206313M) budget submission. The <b>Tier II/UAS</b> is a new start program that will provide persistent, Intelligence, Surveillance, and Reconnaissance (ISR) support for tactical level maneuver decisions and unit level force defense/force protection for Navy ships and Marine Corps land forces. This system will fill the ISR capability shortfalls identified by the Navy Small Tactical Unmanned Aircraft System (STUAS) and Marine Corps Tier II UAS efforts. Consisting of three air vehicles, one ground control station, three payloads, and associated launch, recovery and support equipment this system will support the Navy missions including building the Recognized Maritime Picture, Maritime Security Operations, Maritime Interdiction Operations, and support of Navy units operating from sea/shore in the GWOT and the Marine Corps close range (&lt;50 nautical miles (nm)) UAS enabling enhanced decision-making and improved integration with ground schemes of maneuver. This submission is the Marine Corps portion of the program and has been coordinated with the Navy budget submission PE# 0207257N.</p> <p><b>Theater Battle Management Core Systems (TBMCS)</b> is the Chairman, Joint Chiefs of Staff mandated air war planning tool for the generation, dissemination and execution of the Air Tasking Order/Airspace Control Order (ATO/ACO). It is the primary Air Command and Control (C2) tool utilized within the joint theater of operations.</p>

<b>(U) D. ACQUISITION STRATEGY:</b>										
<p>(U) <b>CAC2S:</b> The Systems Development and Demonstration (SDD) phase was implemented after the successful completion of the established Program Definition Risk Reduction (PDRR) phase exit criteria. The SDD phase includes the development and verification of the engineering development model representative of the basic common communications, sensor interface and processing, and display components. The SDD contains options for the Production and Deployment Phase (Phased Pricing Fixed Fee). The Production Phase will rely on available commercial items and other equipment meeting the open systems architecture requirement.</p> <p>(U) <b>CRITICAL INFRASTRUCTURE:</b> The program will be executed under Government Works contract by evaluating proposals that will be compatible with Defense Video Services-Global (DVS-G) and service programs.</p> <p>(U) <b>MACCS SUSTAINMENT:</b> The family of systems that comprise the MACCS Sustainment program include all of the currently fielded Air Command and Control assets. These include the Tactical Air Operations Module (TAOM), Communications Data Link System (CDLS), Sector Anti-Air Warfare Facility (SAAWF), Air Defense Communication Platform (ADCP), Direct Air Support Central Airborne (DASCA), Direct Air Support Central Airborne System (DASCAS), TAOM Interface Unit (TIU), Multi-Channel Interface Unit (MCIU), Communication Interface System (CIS), Joint Tactical Information Distribution System (JTIDS), and Joint Range Extension (JRE).</p> <p>(U) <b>CTN:</b> The USMC's CTN acquisition strategy is to participate in the USN's program procurement and testing, making necessary modifications to support the Marine Corps' requirement.</p> <p>(U) <b>MCTIS (BTID):</b> Economy of scales dictate a strategy that highly leverages Joint/coalition evolutionary development and acquisition efforts. The FY03-FY05 Coalition Combat ID Advanced Concept Technology Demonstration (CCID ACTD) completed in October 2005 resulted in a process that evaluated the Military Utility of a Standard NATO Agreement (STANAG) 4579 Compliant millimeter wave (mmW) Target Identification system and other technologies with the objective of identifying the best system to satisfy the Marine Corps requirement. FY04/05 efforts focused on unique system integration efforts and participation in the Joint Forces Command (JFCOM) sponsored operation Exercise Urgent Quest. The resultant analysis and action by the Army Marine Corps Board in March 2006 directed a Army led Component Program, which will complete for resources in the FY08 Service POMs. As a Component lead activity the Marine Corps will resource unique Marine Corps integration and Programmatic requirements through the System Development and Demonstration (SDD) Phase of the Program. The designated Milestone Decision Authority is anticipated to be PEO IEWS and managed by PMTIMS at Fort Monmouth, NJ.</p>										

EXHIBIT R-2a, RDT&E Project Justification		DATE:
APPROPRIATION/BUDGET ACTIVITY		PROJECT NUMBER AND NAME
<b>RDT&amp;E, N/BA-7 Operational Systems Development</b>	<b>0206313M Marine Corps Communications Systems</b>	<b>February 2007</b> <b>C2273 Air Operations C2 Systems</b>
<p>(U) Single Integrated Air Picture (<b>SIAP</b>): is a systems engineering effort that will be utilized to reduce risk and increase interoperability for legacy and future Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance C4ISR systems.</p> <p>(U) Theater Battle Management Core Systems (<b>TBMCS</b>): TBMCS is an ACAT 1AC, USAF Program with joint interest/oversight. It was mandated by the Chairman, Joint Chiefs of Staff in July 93 for Air Tasking Order (ATO) Interoperability among all Services. The USMC will not be letting any competitive contracts for TBMCS, but following the USAF lead, utilizing USAF TBMCS contracts and fielding only the joint modules of TBMCS. As USMC unique requirements are identified and funded, they will be provided to the USAF (to include funding) for inclusion within TBMCS utilizing the USAF cost plus fixed fee contract.</p> <p>(U) Small Unit Remote Scouting System (<b>SURSS</b>): These programs range from off-the-shelf modifications to developmental items. Modification covers safety, reliability, and technology up-grades to meet Marine Corps requirements. Plans are being drafted for block 1 upgrade to migrate to a Joint Small Unmanned Aerial System (UAS) and become interoperable with MAGTF C2.</p> <p>(U) <b>TIER II UAS</b>: The program office expects to utilize a competitive acquisition approach to quickly field a capability with limited development. Spiral development will be utilized to field a system fully compliant with documented requirements.</p> <p>(U) <b>COC</b>: The Combat Operations Center (COC) is a Competitively Awarded Contract for design (cost type) and Firm Fixed Price production options.</p> <p><b>(U) E. RDT&E Articles Qty								
<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
(U) Command and Control (C2) Warfare Project includes the following tactical electronic intercept, direction finding, and electronic attack systems:								
<p><b>Tactical Electronic Reconnaissance Processing and Evaluation System (TERPES)</b> is used to process, sort, analyze, display and correlate electronic surveillance and electronic attack data collected by EA-6B aircraft and maintains the Tactical Electronic Orders of Battle.</p> <p><b>Mobile Electronic Warfare Support System, Product Improvement Program (MEWSS-PIP)</b> will be used to collect and process communication and non-communication signals and provide electronic attack capability from a mobile ground platform.</p> <p><b>Radio Reconnaissance Equipment Program (RREP)</b> provides the Radio Battalions, Radio Reconnaissance Platoons (RRP) with mission unique Signals Intelligence/Ground Electronic Warfare (SIGINT/EW) Equipment suites. The latest suite of equipment, the SIGINT Suite 3 (SS-3) is comprised of technology and equipment necessary to prosecute advanced wireless signals. The RRP Marines are trained and equipped to support the full spectrum of Marine Expeditionary Unit Special Operations Capable (MEU SOC) mission profiles as well as provide real time, imbedded support to any special operations scenario. This provides the supported commander greater flexibility in employing his SIGINT assets when the use of conventional Radio Battalion assets are not feasible. RREP is currently maintaining the SS-3 using a spiral development approach that inserts the latest technology into the suite as it becomes mature. This enables the SS-3 to remain a current platform against emerging threats.</p> <p><b>Communication Emmitter Sensing and Attacking System (CESAS)/(FLAMES)</b> a system of COTS/GOTS designed to support the Marine Air Ground Task Force MAGTF Commander in conducting operations. It provides the capability to effectively sense/detect and attack, through the use of electromagnetic energy, the enemy's communication systems in support of the Commander's Electronic Warfare plan. The system will replace for the existing AN/ULQ-19 and will assume the mission of sensing and denying the enemy the use of the electromagnetic spectrum, thereby disrupting his command and control system. Though primarily HMMWV-mounted, CESAS will also be capable of both seaborne and airborne deployment and employment, enhancing the Radio Battalion's ability to support Expeditionary Maneuver Warfare. The CESAS operate within the bandwidth of 20 to 2500 MHz (Threshold) 2MHz to 8000 MHz (Objective) against enemy emitters that use modern modulation schemes.</p> <p><b>Counter Remote Controlled Improvised Explosive Device (RCIED) and Elect Warfare (Jammers/CREW)</b> provides full spectrum protection against high and low power threats. The RCIED is capable of being integrated in all Marine Corps Tactical Ground Vehicles. This program is an ongoing effort to develop new techniques to improve the capabilities of the system by doing enhancements to software and to develop upgrades in order to prevent technology obsolescence.</p>								
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM</b>								
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009

<b>(U) D. ACQUISITION STRATEGY:</b>										
<p><b>TERPES:</b> The acquisition of components for the TERPES upgrade refreshes will maximize the use of existing equipment, NDI/COTS/GOTS/GFE equipment and software. The integration effort for TERPES hardware and software will be accomplished through the TERPES System Support Activity, Naval Air Warfare Center - Weapons Division, Pt. Mugu, CA. These efforts are directed by the Program Manager for Intelligence Systems, MAGTF C4ISR Product Group, Marine Corps Systems Command. TERPES will parallel enhancements to the EA-6B Improved Capabilities (I CAP II) and (ICAP III) upgrades and automatic interface of TERPES, Global Command and Control System - Integrated Imagery and Intelligence (GCCS-I3) and future joint mission planning and Distributed Common Ground/Surface System - Marine Corps (DCGS-MC).</p> <p><b>MEWSS PIP:</b> The MEWSS PIP provides an Electronic Warfare support system that leverages from the Army CECOM Intelligence Electronic Warfare Common Sensor (IEWCS) program. Developmental and fielding efforts of the block upgrades focus on incorporating technology enhancements into the fielded system and providing specified block capabilities to the fleet as they become available. The MEWSS PIP leverages, when available COTS/GOTS/NDI solutions to obsolescence, operational readiness and supportability.</p> <p><b>RREP:</b> The RREP will incorporate and integrate cutting edge technologies through the use of Commercial off the Shelf (COTS) and Government off the Shelf (GOTS) and Non-Development Items (NDI) components.</p> <p><b>CESAS:</b> Acceleration of the CESAS effort and designation of CESAS as a Program of Record was undertaken as part of the Defense Emergency Response Funding initiative (DERF). Funds were applied to the program in FY-2 and together with FY03 DERF funds, an initial AN/ULQ-19 replacement capability was provided to the fleet in the Feb 04 for filed user evaluation purposes. Three (3) AN/USQ-146(V) 3 units were procured from Rockwell Collins and integrated into the HMMWV platforms. SSCC performed the integration effort. Two (2) prototypes were used for DT in Aug 03 with assistance from MCOTEA. OA was conducted in Dec 03 with a success rate. Upon completion of OA, SSCC incorporated ECP and modifications identified during OA in the prototype units. Two (2) prototypes were provided to 3rd RADB in Feb 04 for FUE, production will begin in FY05 meeting the IOC and FOC in FY07.</p> <p><b>Counter RCIED and Elect Warfare (CREW):</b> The program is an ongoing effort to develop new techniques to improve the capabilities of the System by doing the following; Enhancing software capabilities to operate within the target environment; Develop hardware upgrades in order to prevent technology obsolescence; As the technologies and upgrades are replaced, there will be a requirement for testing and integration of the new capability and enhancement of system capabilities.</p>

<b>(U) E. MAJOR PERFORMERS:</b>		
<b>COUNTER REMOTE CONTROLLED IMPROVISED EXPLOSIVE DEVICE (RCIED)</b>		
FY08 NAVAL SURFACE WARFARE CENTER (NSWC), Crane IN. Provide funds for hardware, software testing and integration research. TBD: Engineering Analysis and Hardware and Software Development.		
FY09 NSWC, Crane, IN. Continue to provide funds for hardware, software testing and integration research. TBD: Engineering Analysis and Hardware and Software development		
<b>MOBILE ELECTRONIC WARFARE SUPPORT SYSTEM, PRODUCT IMPROVEMENT PROGRAM (MEWSS-PIP)</b>		
FY06 SPACE AND NAVAL WARFARE SYSTEMS CENTER (SPAWAR), Charleston, SC. Legacy MEWSS readiness enhancements.		
<b>COMMUNICATION EMMITTER SENSING AND ATTACKING SYSTEM (CESAS/FLAMES)</b>		
FY06 NAVSEA, Provide research and development of techniques, tactics and procedures NSWC, Crane, Provide testing support		
FY07 NAVSEA, Provide research and development of techniques, tactics and procedures NSWC, Crane, Provide testing support		
FY08 NAVSEA, Provide research and development of techniques, tactics and procedures		
FY09 NAVSEA, Provide research and development of techniques, tactics and procedures		
<b>TACTICAL ELECTRONIC RECONNAISSANCE PROCESSING AND EVALUATION (TERPES)</b>		
FY06 NAVAL AIR WARFARE CENTER (NAWC), Pt Mugu CA. Provide funds for hardware, software and integration research. LOCKHEED MARTIN, Denver CO. Provide funds for research on TERPES software applications to provide improvement in the interfaces and interoperability with the EA-6B and mission planning systems. MARCORSYSCOM, (CEOSS), Titan Corporation, Reston, VA. Provide funds for software integration and testing. NSMA, (MTC), ITsFAC, Stafford, VA. Provide integration facility and program management support.		
FY07 NAVAL AIR WARFARE CENTER (NAWC), Pt Mugu CA. Continue to provide funds for hardware, software and integration research. LOCKHEED MARTIN, Denver CO. Continue to provide funds for research on TERPES software applications to provide improvement in the interfaces and interoperability with the EA-6B and mission planning systems.		
<b>RADIO RECONNAISSANCE EQUIPMENT PROGRAM (RREP)</b>		
FY06 NSMA, (MTC), ITsFAC, Stafford, VA. Provide integration facility and program management support NSWC, Crane, Provide System Engineering support, begin development of DAR S/W and H/W Solution ARMY COMMUNICATIONS & ELECTRONICS COMMAND (CECOM). Provide integration facility.		
FY07 NSMA, (MTC), ITsFAC, Stafford, VA. Continue to provide integration facility and program management support NSWC, Crane, Continue to provide System Engineering support, begin development of DAR S/W and H/W Solution CECOM, Provide integration facility		
FY08 NSMA, (MTC), ITsFAC, Stafford, VA. Continue to provide integration facility and program management support NSWC, Crane, Continue to provide System Engineering support, begin development of DAR S/W and H/W Solution CECOM, Provide integration facility		
FY09 NSMA, (MTC), ITsFAC, Stafford, VA. Continue to provide integration facility and program management support NSWC, Crane, Continue to provide System Engineering support, begin development of DAR S/W and H/W Solution CECOM, Provide integration facility

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>										
<p>(U) <b>Integrated Intra-Squad Radio Systems (IISR)</b> - Integrated Intra-Squad Radio is a short-range radio that utilizes advanced wireless LAN technology and spread spectrum techniques to provide a hands free intercommunication capability while ensuring a low probability of interception and detection. The IISR consists of a small radio unit powered by 2 AA batteries, a wireless PTT switch, a lightweight headset compatible with the current combat helmet, and a heavy-duty nylon pouch. The dual version integrates with the AN/PRC-148 using an additional Push-to-talk (PTT) switch to provide the user control of two radio with one headset/microphone.</p> <p>(U) <b>Tactical Satellite Comm Terminal (TSCT) - LIGHTWEIGHT MULTIBAND SATELLITE TERMINAL (LMST)/GROUND MOBILE FORCES (GMF)</b> is a tri-band Super High Frequency (SHF) satellite terminal mounted in transit cases and transported by HMMWVs. They will augment the existing Ground Mobile Force (GMF) satellite terminals. Additionally, across the FYDP, in accordance with the LMST Acquisition Strategy and Baseline, a quantity of 21 existing GMF terminals (TSC-93) will be upgraded and refurbished with enhanced components in order to extend their useful life. The GMF upgrades will occur concurrent with additional LMST transit case terminal procurements.</p> <p>(U) <b>Legacy Communications/Electronics Modifications and Sustainment</b> encompass post production sustainment of fielded tactical communication and networking systems and service life extension programs (SLEP) of aging communications equipment reaching the end of their life cycle. The post production sustainment provides necessary engineering and logistic support to maintain the existing operational capability above threshold operational readiness. The support provides equipment specialists, configuration management, supply support coordination and control, depot maintenance control and warranty administration.</p> <p>(U) <b>Networks:</b> The following systems require SLEP/supportability upgrades: The Unit Level Circuit Switch (ULCS), which consists of the TTC-42, SB-3865 and SB-3614 require sustainment and modifications to continue the operating forces networking/switching capability until TSM is fielded. The AN/TSQ-227 Digital Technical Control (DTC) upgrades are driven by DoD mandated interoperability and security requirements, which includes technology insertion and evolutionary equipment improvements.</p> <p>(U) <b>Wireless:</b> The following systems require SLEP/supportability upgrades: These are the AN/TRC-170 Tropospheric Scatter Microwave Radio Terminal and the AN/PSC-5 "ShadowFire" upgrade. The AN/TRC-170 provides secure digital trunking between major nodes of the TRI-TAC communications network with a range of over 100 miles and will reach its end of service life in FY05. The FY05 upgrade allows for the fielded AN/PSC-5 to support past FY04.</p> <p>(U) <b>Command &amp; Control On-the-move Network, Digital Over-the-horizon Relay - (CONDOR)</b> is a direct result of after action reports from Operations Iraqi Freedom and Enduring Freedom. The equipment suite will enable and provide on-the-move (OTM), over-the-horizon (OTH) connectivity between Tactical Data Radio networks (such as EPLRS networks). A CONDOR GW equipment suite consists primarily of a SATCOM modem, a mobile SATCOM antenna, a router, LAN encryption equipment, and a shock-mounted transit case. No vehicles are being procured. The CONDOR GW equipment suite will be installed on existing vehicles.</p> <p>(U) <b>SHF Wideband Replacement (HC3)</b> will be the Marine Air Ground Task Force (MAGTF) commanders primary SATCOM method of transmitting and receiving wideband voice, video, and data. The HC3 will be used at all levels of the MAGTF to support the commanders critical communication requirements. At the Regiment and below the focus will be on Comm-on-the-Move (COTM) and Comm-on-the-Pause (COTP) communications while at the Division/FSSG/Wing and above the transportable version will be incorporated as well. HC3 will be embedded in tactical vehicles such as the Expeditionary Fighting Vehicle (EFV) and the Light Armored Vehicle (LAV). As a result, it will play a vital role in command and control in all phases of an operation.</p> <p>(U) <b>Wireless Cable Replacement (WCR)</b> - The Wireless Cable Replacement (WCR) Initiative will procure a line of sight, unattended repeater capable of data rates ranging from 4.6 Mb/s to 155 Mb/s. This repeater will wirelessly remote data and telephone services from command and control centers to transmission systems such as the AN/MRC-142 and the AN/TRC-170. OIF Lessons-Learned revealed that fiber optic cables were highly susceptible to damage, leading to loss of service to the supported commander and staff. The WCR initiative fulfills the WCR Requirement within the Digital Wideband Transmission System (DWTS) Required Operational Capability (ROC) CCC 256.1.2, change 6 dated 28 Jan 04. The subject and purpose of the DWTS ROC is the official requirement for the AN/TRC-170, AN/MRC-142(A&amp;B), and the WCR in the Marine Corps.</p>

**(U) D. ACQUISITION STRATEGY:**

**(U) LEGACY COMM ELECTRONICS MOD:** Provide continuous sustainment support to fielded equipment and implemented Service Life Extension Programs for equipment reaching its end of life/supportability.

**(U) Tactical Satellite Comm Terminal - LMST-** Due to funding constraints, the acquisition strategy for the Lightweight Multiband Satellite Terminal and GMF terminals is to procure the minimum amount of LMST terminals for the FMF to satisfy the need for a modern tri-band satellite terminal in the USMC inventory while simultaneously upgrading the legacy GMF TSC-93 terminals with enhanced components. Upgrading the GMF terminals is in accordance with the LMST acquisition strategy and will attempt to fill the gap in USMC SATCOM capability since funding will not allow for meeting the LMST AAO completely. The LMST upgrade program leverages off the current efforts and integrates the full duplex Ka-band capabilities into existing terminals.

**(U) SHF Wideband Replacement (HC3)** is the long-term Development of multi-band replacement terminals synchronized with Transformational Communications (TC) satellite availability across the DoD. The USMC RDTE funding is for pre-milestone B activities & partnering with industry with Initial studies and transfer of technology between services. And, it will bring capability to test incrementally as selected technologies mature. The early efforts will ensure USMC interests are given equal weight to that of other services as this terminal will replace (approx. 2010/2012) all other DoD SATCOM terminals.

**(U) INTEGRATED INTRA-SQUAD RADIO - IISR-** Integrated Intra-Squad Radio is a short-range radio that utilizes advanced wireless LAN technology and spread spectrum techniques to provide a hands-free intercommunication capability while ensuring a low probability of interception and detection. The IISR consists of a small radio unit powered by 2 AA batteries, a wireless PTT switch, a lightweight headset compatible with the current combat helmet, and a heavy-duty nylon pouch. The dual version integrates with the AN/PRC-148 using an additional Push-to-talk (PTT) switch to provide the user control of two radios with one headset/microphone.

**(U) Command & Control On-the-move Network, Digital Over-the-horizon Relay - CONDOR---** CONDOR was approved as an ACAT Level III program. Commanding Officer MCSC will be the MDA. The MCSC CONDOR project office will pursue a Milestone B decision during 1st QTR FY07 and a Milestone C decision during 2nd QTR FY07. The CONDOR GW concept has been developed over the past 29 months by the cooperative efforts of MCSC and ONR (Littoral Combat, Future Naval Capabilities). Having achieved advocate endorsement at the CEAB in August 2003, CONDOR GW has a Technology Transition Agreement (TTA) with ONR for transition to a Program of Record (POR).

**(U) Wireless Cable Replacement - WCR -** The acquisition strategy for WCR involves the testing and procurement of a fully developed and mature COTS product. MCSC WCR will select from 3 or more manufacturers. The final selection will be based on capability, price, and Marine Corps test results.

EXHIBIT R-2a, RDT&E Project Justification		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N /BA-7 Operational Sys Dev</b>	PROGRAM ELEMENT NUMBER AND NAME <b>0206313M Marine Corps Communications Sys</b>	PROJECT NUMBER AND NAME <b>C2276 Communications Switching &amp; Control Systems</b>
<p><b>(U) Related RDT&amp;E: Not Applicable.</b></p> <p><b>(U) D. ACQUISITION STRATEGY NPM:</b> NPM uses the Joint Army-led acquisition strategy for JNMS. This is an evolutionary strategy with an initial Build to include all KPP and Threshold requirements. It is followed by pre-planned Builds to incorporate Objective requirements. The JNMS contract method is competitive with a Cost Plus contract for development that is centrally funded by the Army, except for any unique Service requirements. Services are responsible for procurement, fielding and support costs. The production contract is Fixed Price and the fielding and support is Time and Material (T&amp;M). The JNMS acquisition strategy emphasizes the use of Commercial Off The Shelf (COTS) and Government-off-the-Shelf (GOTS) products. The SPEED acquisition strategy is for spiral development. The SPEED contract method is through a sole source Basic Purchase Agreement (BPA) using Fixed Price Task Orders based on the developers GSA schedule for manhours.</p> <p><b>(U) D. ACQUISITION STRATEGY TSM:</b> calls for the use and integration of proven commercial switching technologies of sufficient maturity for production. After completing DT/SIT using FY06 funds, this program will achieve milestone C and begin an Urgent and Compelling Procurement/Production and Fielding. This program will begin full-rate production and fielding in FY07. All R&amp;D efforts will be tested prior to incorporating them into the TSM, or delivering support to the Op Forces.</p> <p><b>(U) D. ACQUISITION STRATEGY ECCS:</b> ECCS will use the evolutionary acquisition strategy and pursue a competitive firm fixed price contract. Major concerns will be interoperability and compatibility with existing systems and components. R&amp;D effort will focus on developing and integrating "miniaturized" version of existing components. Emerging technologies such as VoIP and Secure Wireless will also be addressed in the out year R&amp;D effort.</p> <p><b>(U) D. ACQUISITION STRATEGY FICCS:</b> FICCS is an evolutionary acquisition strategy. RDTE funds in FY07 will be used to test and evaluate Commercial Off the Shelf (COTS) emerging technology items for possible integration into the JECCS production units.</p> <p><b>(U) D. ACQUISITION STRATEGY TDN:</b> TDN's is a evolutionary acquisition strategy. As new products and industry standards are produced, they are to be tested and integrated into TDN equipment. RDTE funding in FY08 and FY09 are to be used to test and evaluate Commercial Of The Shelf (COTS) items which will be integrated into TDN Gateways and Data Distribution Systems (DDS) to fulfill ORD requirements.</p> <p><b>(U) E. Major Performers:</b>  FY06 - (NPM) NGIT, Winterpark, FL. CECOM, Momouth, System Version 1.4 development variant ECP JUN 06  FY 06/08/09 - (TSM) EDO/Darlington, Wando, SC. Develop training documentation and test package, MAR 06/FEB 08/DEC 08  FY06 - (ECCS) - Tecolote Research, Goleta CA. Analysis of alternatives MAR 06  FY07/08 (ECCS) - Contractor TBD. Develop and test miniaturized components that provide DISN services while On-The-Move/Enroute. NOV 06/NOV 07  FY06 - (FICCS) EDO/Darlington, Inc., Wando, SC. Lab modification JUN 06  FY07 (FICCS) - EDO/Darlington, Inc., Wando, SC. Integration of VoIP, Secure Wireless, and ATM Technologies, FEB 07  FY06/08/09 (TDN) - Cornerstone Building Group, San Diego CA, New equipment testing and support. APR 06/ JAN 08/ JAN 09</p>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>(U) This project provides funds for engineering, test, and evaluation activity, which ensures that the systems being developed within the Program Element (PE) employ consistent standards for interoperability and, to the maximum extent feasible, use hardware, and software which is uniform across programs.</p> <p><b>Joint Distributed Engineering Plant (JDEP)</b> directly supports the DoD mandated directive, CJCSI 6212.01D, to evaluate the interoperability of the Federation of Systems (FedOS) Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) configurations that support joint forces, evaluate interoperability of new and fielded acquisition system, and provide an environment for engineering analysis to correct systems deficiencies and develop new capabilities that can operate in the joint environment.</p> <p><b>Joint Interoperability of Tactical Command and Control Systems (JINTACCS)</b> is a Joint Chiefs-of-Staff (JCS)/DoD-mandated program for joint development, implementation, and testing of tactical data links and US Message Text Format (MTF) under the direction of the Defense Information Systems Agency (DISA) and Office of the Secretary of Defense/Networks and Information Integration (OASD/NII). iaaw Commander Joint Chiefs of Staff (CJCSI) 6610.01B and CJCS16241.04 for USMTF.</p> <p><b>Coalition Warrior Interoperability Demonstration (CWID)</b> (a.k.a. Joint Warrior InterOperability Demonstration (JWID)) is a Joint Chiefs-of-Staff (JCS) and a Chairman of the Joint annual event. CWID remains the premier event to investigate interagency and coalition interoperability problems. CWID defines solutions that can be applied in the operational community. CWID's mission is to conduct military operations to deter, prevent, and defeat threats and aggressions aimed at the US, its territories and assigned areas of responsibilities as directed by the President or Secretary of Defense.</p> <p><b>Marine Air-Ground Task Force Command, Control, Communications, Computers, and Intelligence Systems Engineering and Integration, Coordination. (MAGTF C4I SEI&amp;C)</b> Provides for the centralized planning and execution of Marine Corps Enterprise Information Technology and National Security Systems. It develops, certifies and manages the configurations of the Marine Corps Enterprise Systems and Technical Architecture products and uses these to support enterprise-level systems engineering. It is used to conduct an annual system of systems testing called the Federation-of-Systems (FedOS) to ensure joint interoperability and the performance of critical Marine Corps systems directly supporting the Marine Corps Operating Forces. It is used to conduct direct MEU/MEF support in system integration testing with USN (Part of Deploying Group Systems Integration Testing (DGSIT)) and workups for MEF deployments. It is also used to support our coordination and involvement in DoD initiatives that include ForceNet, Global Information Grid Enterprise Services (GIGES), and other Deployable Information Systems Architecture DISA/NETWARCOM efforts.</p>

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

(U) This project encompasses two sub-element programs which are part of the Integrated Air Defense System for the Marine Corps.

**The Complementary Low Altitude Weapons System (CLAWS)** is a mobile ground based air defense missile system designed to defeat threat cruise missiles, unmanned aerial vehicles, rotary wing and fixed wing aircraft. CLAWS shall provide a rapidly deployable, mobile, high firepower, all-weather, standoff air defense system to defend Marine Expeditionary Forces and Naval Forces from attack by cruise missiles, aircraft and Unmanned Aerial Vehicles (UAVs). It will complement existing Short Range Air Defense (SHORAD) capabilities and will interface with current and proposed Marine Command and Control Systems, sensors, and data paths. **Note: As of 2 May 06, the CLAWS program was suspended prior to fielding while awaiting formal program termination notification.**

**Ground Based Air Defense Transformation (GBAD-T):** Based upon the deployment of the Low Altitude Air Defense (LAAD) Battalions and their employment of the Stinger Missile, GBAD-T transforms Air Defense equipment through technology insertion and equipment repackaging to address capability gaps as the result of equipment obsolescence and the emergent and evolving threats to the Marine Air Ground Task Force (MAGTF). GBAD-T consist of four efforts: 1) sustainment of currently fielded LAAD equipment/assets; 2) fielding and support of the Advanced Man-Portable Air Defense System (A-MANPADS) that replaces the Avenger Weapon System and existing MANPADS vehicles; 3) replacing the Remote Terminal Unit (RTU), an effort that replaces an 18 pound laptop computer that provides Situational Awareness and Command and Control to the Stinger and MANPAD teams. The RTU replacement will interface with and be capable of receiving a Common Aviation Command and Control Systems (CAC2S) broadcasted link; and 4) Replacing the unsupported and obsolete Stinger Missile Night Sight with the PAS-13 Thermal Sight. R&D is required to incorporate the Stinger Missile reticule and hardware interface and execute developmental testing. The PAS-13 provides twice the range and weight.

**Battlefield Target Identification System (BTIS)/Mounted Cooperative Target ID System(MCTIS)** in FY-08 and beyond - will be a cooperative battlefield target identification device that employs encrypted, Ka band, millimeter wave, question and answer technology. It will consist of interrogator and transponder antennae, transceiver, and communications/electrical interface unit. It will be fielded as two variants: interrogator/transponder system for Expeditionary Fighting Vehicles (EFVs), Light Amphibious Vehicles (LAVs), and M1A1s; and transponder-only system for combat support and combat service support vehicles. When fielded, mounted weapon systems will have the capability to identify targets as friendly or unknown, at ranges to 6 km, before engaging them. They and all other designated vehicles will also possess the capability to rapidly identify themselves as friendly to weapon systems equipped with comparable systems prior to being engaged. As a result, incidents of fratricide and collateral damage will decline, while the range at which targets may be engaged without fear of misidentification will increase dramatically. The system will be interoperable with Joint, Allied, and Coalition forces' cooperative target identification systems.

**The Joint Combat Identification Evaluation Team (JCIET)** is a superb opportunity to conduct quality assurance testing of services' systems operating in a joint environment. It conducts assessments in a number of venues including: Military Operations in Urban Terrain (MOUT) exercises, Advanced Concept Technology Demos (ACTD), Joint Training exercises, Combined Armed Training Exercises (CAXs), and Weapons Tactics Instruction (WTI) events. Its mission is to improve Tactics, Techniques and Procedures (TTP) across all Combat Identification mission areas. (It is not an acquisition program, therefore it does not have specific milestone dates.) The JCIET program resides in C2273 in FY06 within the same P.E.

PROGRAM ELEMENT NUMBER AND NAME

PROJECT NUMBER AND NAME

**RDT&E, N /BA-7 Operational Sys Dev****0206313M Marine Corps Communications System****C2278 Air Defense Weapons Systems****(U) D. ACQUISITION STRATEGY:**

**(U) CLAWS:** CLAWS integrates government furnished equipment (GFE), non-developmental items (NDI) and new technology to develop a surfaced launched Anti-Air launcher. CLAWS will utilize the AMRAAM (current inventory DoD missile), existing High Mobility Multi-purpose Wheeled Vehicle (HMMWV) and contractor developed missile launch platform. CLAWS completed Developmental Test (DT) in FY05 and completed Operational Test (OT) during 1st Qtr FY06.

**(U) GBAD- TRANSFORMATION:** Designated an Abbreviated Acquisition Program (AAP), GBAD-T effects the rapid transition from the Avenger/MANPADS weapon system to the more mobile, flexible, and maintainable Advanced MANPADS. The AAP leverages off existing contracts and is principally comprised of integrating Government Off The Shelf (GOTS) equipment and Non-developmental Items (NDI).

**(U) MCTIS (BTID):** Economy of scales dictate a strategy that highly leverages Joint/coalition evolutionary development and acquisition efforts efforts. The FY03- FY05 Coalition Combat ID Advanced Concept Technology Demonstration (CCID ACTD) completed in October 2005 resulted in a process that evaluated the Military Utility of a STANAG 4579 Compliant millimeter wave (mmW) Target Identification system and other technologies with the objective of identifying the best system to satisfy the Marine Corps requirement. FY04/05 efforts focused on unique system integration efforts and participation in the JFCOM sponsored operation Exercise Urgent Quest. The resultant analysis and action by the Army Marine Corps Board in March 2006 directed a Army led Component Program, which will compete for resources in the FY-08 Service POMs. As a Component lead activitey the Marine Corps will resource unique Marine Corps integration and Programmatic requirements through the System Development and Demonstration (SDD) Phase of the Program. The designated Milestone Decision Authority is anticipated to be PEO IEWS and managed by PMTIMS at Fort Monmouth, NJ.

**(U) E. MAJOR PERFORMERS****CLAWS:**

FY06 Raytheon, Tewksbury, MA. Fielding/sustainment for CLAWS Increment 0 Launchers. SLAMRAAM Increment I System Development; CLAWS Increment I Launcher DT.

FY07 Raytheon, Tewksbury, MA. Program closeout.

**GBAD Transformation:**

FY06 Raytheon, Tewksbury, MA RTU Replacement, S/W Integration

FY06 Raytheon, Tewksbury, MA. GBAD/CLAWS Integration.

FY07 NSWC, Crane, IN. Technical Engineering Services.

FY08 Raytheon, Tewksbury, MA CAC2S Integration

FY08 NSWC, Crane, IN. Technical Engineering Services

FY09 TBD, Product Development (Multi Mission Missile)

**MCTIS:**

FY05-FY07 NSWC, Crane, IN Engineering Services.

FY05-FY07 MarCorSysCom (PA&E) LCCE Effort. Contractor Techolote

FY05-FY07 MarCorSysCom CEOSS support contract recompeted in Sep 04. Contractor Anteon

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) Training simulators supported by this program element include Joint Simulation System (JSIMS), Closed Loop Artillery Simulation System (CLASS), Multiple Integrated Laser Engagement System (MILES 2000), Special Effect Small Arms Marking System (SESAMS), Combined Arms Command &amp; Control Training Upgrade System (CACCTUS), MAGTF Tactical Warfare Simulation (MTWS) Enhancements, Combat Team Decision, and Range Modernization/Transformation (RMT). These training systems provide tactical weapons and decision-making skill training from entry level through Marine Air-Ground Task Force (MAGTF) staff level. Systems will be interoperable and will allow for mission planning, mission rehearsal and concept evaluation in a valid synthetic environment with objective, timely feedback. Through live, virtual and constructive simulation, the Marine Corps will have the means to train jointly, educate, develop doctrine and tactics, formulate and assess operational plans, assess warfighting situations and define operational requirements.</p> <p><b>NOTE: Funding for this project in FY07 and beyond is found in PE 0206623M.</b></p>								
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>								
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost	5.757	0.000	0.000	0.000				
RDT&E Articles Qty								
CACCTUS: Initial prototype installed at 29 Palms, CA for verification and validation testing by Tactical Training Exercise Control Group (TTECG). Transitioning continues from test bed to target simulation engine. Integration of operation C4I systems with sim. Development and integration of sim interfaces and visualization tools								
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost	1.379	0.000	0.000	0.000				
RDT&E Articles Qty								
MILES: Develop Dry Fire Trigger capability, develop extended service capability for the Automatic Small Arms Alignment Fixtures (ASAAF), develop Wireless RF Detectors belt, and integrate MK19 40 mm machine gun capability into existing MILES 2000 inventory.								
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost	1.377	0.000	0.000	0.000				
RDT&E Articles Qty								
MTWS Enhancements: The MTWS support initiative includes software and system development support, training network infrastructure support, and hardware support to include: develop an HLA interface between MTWS and other simulation models, such as Joint Conflict and Tactical Simulation (JCATS) and other selected models; develop MTWS-C4I interoperability with Command and Control PC (C2PC), Army Field Artillery Tactical Data System (AFATDS), Theater Battle Management Corps System (TBMCS), and Common Aviation Command and Control System (CAC2S); enhanced man machine interface for efficient exercise generation and execution processes, and reduce the number of exercise operators and controllers; refresh computer hardware training suites, and supporting training communication network infrastructure; develop Course of Actions and Analyses (COAA) capability; rules of engagement for multi-sided warfare and organizations; and Airborne Electronic Warfare and Advanced synthetic natural environment upgrade.								
<b>(U) Total \$</b>	<b>8.513</b>	<b>0.000</b>	<b>0.000</b>	<b>0.000</b>	<b>0.000</b>	<b>0.000</b>	<b>0.000</b>	<b>0.000</b>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p><b>(U) The MAGTF Combat Service Support Element &amp; Supporting Establishment (CSSE &amp; SE) consists of mutually supporting Logistics Information Technology (IT) programs that support force deployment, planning, and execution; sustainment and distribution; and contribute to the Combatant Commander's Common Operating Picture (COP) to support rapid accurate decision making.</b></p> <p><b>Marine Common Hardware Suite (MCHS)</b> centralizes and standardizes management and acquisition of all Tactical common computer hardware and infrastructure by adopting the Joint Defense Information Infrastructure (DII) Common Operating Environment (COE) with consolidated Integrated Logistics Support. Ensures the environment remains in synchronization with computer hardware technology hardware improvements. The mission supports the Commandant's Planning Guidance and the Marine Corps Master Plan.</p> <p><b>Global Combat Support System-Marine Corps (GCSS-MC)</b> is the physical implementation of the enterprise information technology architecture designed to support both improved and enhanced MAGTF Combat Service Support functions and MAGTF Commander and Combatant Commander/Joint Task Force (JTF) combat support information requirements. As such, GCSS-MC is not a single system but a portfolio of information technology capabilities tied to discrete performance measures that support required combat service support mission objectives. The Integrated Logistics Concept (ILC) Analysis provided the foundation for logistics transformation within the Marine Corps and established a compliance response to Defense Reform Initiative Directive (DRID) 54, directing that logistics transformation be accomplished throughout the service components. Immediately following the guidance of DRID 54, the GCSS-Capstone Requirements Document (CRD) was approved by the JROC. GCSS-MC is the IT solution to accomplish the transformation and GCSS objectives. GCSS-MC is an integrated set of capabilities. The capabilities will be implemented within a bottoms-up (programs of record) approach within a portfolio of systems. The portfolio of systems contributes to the primary capabilities of GCSS-MC. External portfolios will also contribute secondary to GCSS-MC capabilities through integration strategies. Primary capabilities are supply chain and combat service support oriented.</p> <p>Secondary capabilities and aspects of some of the above are achieved through integration with the Manpower, Acquisition and other portfolios as well as integration with Joint and other Service systems. This integration will migrate the current Shared Data Environment (SDE), Total Force Structure Management System (TFSMS), and Automated Information Technology (AIT) to an integrated Detailed Planning and Current Operations System over the long-term. The capabilities are to be matched against systems remaining after the system realignment and categorization process and then assessed for compliance, alignment and cost effectiveness versus readily available COTS and GOTS products. The GCSS-MC portfolio seeks to most effectively achieve the mandated requirements through provisioning of the capabilities not extending specific systems.</p> <p>GCSS-MC is the IT solution for logistics transformation being developed by the Integrated Logistics Center (ILC). The ILC Analysis was completed during an 18-week engagement beginning in late October 1998 to early February 1999. This analysis concluded with a high-level Business Case Analysis (BCA). The BCA concluded conservatively that accomplishing the ILC actions (including re-engineered IT among others) would reduce Marine Corps inventories and reduce support requirements allowing the shifting of (2000) Marines from logistics to the battlefield by 2004 (given the current timelines). ILC action will also result in: lighter, more flexible and easier to move MAGTF; Higher Combat Service Support (CSS) responsiveness: reduced stocks and CSS footprint inside the MAGTF; Less equipment for Warfighter to manage; Rapidly scaleable and deployable CSS units that have worldwide inventory visibility. Access to more reliable, accurate and actionable information that clarifies the logistics situation awareness; near real time visibility of requests for products and services allowing higher confidence and trust in logistics; and the ability to operate with greater certainty. The resulting capability is referred to as a shared data environment.</p>									

EXHIBIT R-2a, RDT&E Project Justification		DATE: <b>February 2007</b>			
APPROPRIATION/BUDGET ACTIVITY	PROGRAM ELEMENT NUMBER AND NAME	PROJECT NUMBER AND NAME			
<b>RDT&amp;E, N /BA-7 Operational Systems Dev</b>	<b>0206313M Marine Corps Communications Systems</b>	<b>C2510 MAGTF CSSE &amp; SE</b>			
<p><b>Transportation Systems Portfolio</b> (formerly known as TC-AIMS II) funding supports the development, refinement, fielding, maintenance and sustainment of two Joint deployment programs—Integrated Computerized Deployment System (ICODES) and Aircraft Air Load Planning System (AALPS); Three Joint Sustainment programs - Cargo Movement Operations System (CMOS), Automated Manifest System - Tactical (AMS-TAC), and Global Air Transportation and Execution System (GATES); and One Bridging Technology Program Warehouse - To - War Fighter (W2W). TSP also supports software maintenance and sustainment of our existing legacy systems—MAGTF Deployment Support System II (MDSS II).</p> <ul style="list-style-type: none"> <li>- Integrated Computerized Deployment System (ICODES). Ship load planning software application.</li> <li>- Automated Air Load Planning System (AALPS). Allows military air load planners to quickly and efficiently estimate airlift requirements, plan force packages, and modify aircraft loads.</li> <li>- Cargo Movement Operations System (CMOS) A combat support system that automates and streamlines installation level cargo movement processes for both peacetime and deployment/contingency cargo Workstations in ITO/TMO functional areas support one-time data capture for the preparation of documentation for all modes of shipment.</li> <li>- Automated Manifest System – Tactical (AMS-TAC). Transportation tool that utilizes AIT technologies to facilitate In-transit Visibility/ Total Asset Visibility (ITV/TAV) for DLA, US Army, USN, and USMC.</li> <li>- Global Air Transportation and Execution System (GATES) - provides automated cargo and passenger processing, the reporting of in-transit visibility data to the Global Transportation Network and billing to Air Mobility Command's financial management directorate.</li> <li>- Warehouse - To - War Fighter (W2W). Provides In-transit Visibility (ITV) for the last tactical mile of secondary repair parts. W2W is a Bridge System that provides near real-time capture of cargo movement/location through a feed to Battle Command Control System (BCS3) and provides the AS-1 transactions to the Supply Management Unit .</li> <li>- MDSS II (MAGTF Deployment Support System II) allows planners at the unit level to rapidly create lists of deploying equipment and personnel in response to taskings received from higher headquarters. Unit planners can compare on-hand assets to requirements and assign equipment and personnel to specific carriers for both sea deployments and air embarkations. It also provides the Marine Air Ground Task Force (MAGTF) Commander with the automated ability to plan, coordinate, manage and execute the MAGTF operations relevant to various phases of transportation.</li> </ul> <p><b>Joint Forces Requirement Generation II (JFRG II)</b> JFRG II is a GCCS segmented software application designed to provide the Department of Defense (DoD) with a Joint Services, state-of-the-art, integrated, and deployable Automated Information System (AIS) that supports strategic force movements. The JFRG II software application is based on the Marine Corps' Marine Air-Ground Task Force II (MAGTF II) software application. MAGTF II has been in existence since 1991 and is used for task planning, Time Phased Force Deployment Data (TPFDD) editing, and Joint Operational Planning and Execution System (JOPES) interfacing. JFRG II assists in the notional planning process, permits the assignment of actual units to fill notional slots, and generates TPFDD for use in executing Joint Operation Plans. JFRG II provides rapid force list creation and interfaces with the Transportation Coordinators' Automated Information for Movement System (TC-AIMS II) and JOPES. It includes a Joint Deployment Data Library (JDDL) containing reference data required to produce a JOPES-compatible TPFDD extract file. JFRG II also contains modules that include the Unit Line Number (ULN) Summary for rapid force list creation and the Force Module Summary for rapid ULN grouping. JFRG II can generate standard, executive, and ad hoc reports, perform database queries, and export or import TC-AIMS II, MDSS II and JOPES. JFRG II operates and functions in either a classified or unclassified environment. JFRG II provides Joint Services with an automated tool supporting an interim capability to meet the Chairman, Joint Chiefs of Staff (CJCS) 72-hour TPFDD generation requirement.</p> <p><b>Public Key Infrastructure (PKI)</b> provides security objects and mechanisms used by PK-enabled systems and applications. The primary products of PKI are public key certificates and other certified objects used in conjunction with public key certificates (e.g. CA public key certificates, subscriber public key certificates, and CRLs). In addition to public key certificates, PKI provides on-line services (e.g.; on-line certificate status checking), and supplies authenticated attributes in public key certificates and / or attribute certificates. PKI is one of a number of security solutions used to protect information and provide attributes to enable to critical resources in the GIG, and is used concurrently with other solutions (e.g.; in-line network encryptores [INEs] to implement the defense-in-depth concept. In conjunction with PK-enabled applications, PKI is used for identification, authentication, data confidentiality and integrity, and non-repudiation security services.</p> <p>business processes within the Marine Corps. Program Office Vision: to be a supporting asset to the operation forces and program managers in the implementation of AIT solutions. This is accomplished by: 1. Maintaining a viable AIT Lab, with subject matter experts, to stay abreast of emerging technologies, test new equipment, and perform integration analysis and testing. 2. Establishing the Program Office as the central procuring activity for AIT hardware for the Marine Corps, and 3. Managing the USMC portion of the Radio Frequency Intransit Visibility (RF-ITV) fixed infrastructure. The AIT Program Office does the following to support its mission and vision: 1. Manages the USMC Radio Frequency Identification Devices In-transit Visibility (RFID ITV) system. This system consists of fixed RFID interrogators mounted at various bases and stations throughout the Marine Corps. The interrogators collect information from RFID tags and pass that information to the National ITV System. 2. The AIT Program Office is the central procuring office for AIT hardware in the Marine Corps. This will enable the Marine Corps to standardize hardware (such as bar-code scanners or passive RFID interrogators and across the Marine Corps. 3. The AIT Program Office also conducts research and development of new technologies and assists in technology insertion into applications. This R&amp;D capability enhances the Marine Corps' capability to quickly assimilate emerging technologies and leverage them to support more efficient, accurate business processes and data capture.</p>

<b>Public Key Infrastructure (PKI):</b> Based on an ASD ADM, DoD PKI development will be conducted through a series of block upgrades. Transition to this approach commences in FY 06 with the initiation of Increment 1. Increment 1 will contain two enhancement categories: functional enhancements, changes that result in increased capability or functionality for the PKI and assurance enhancements, changes that result in increased levels of security and assurance and that address the mitigation of identified risks with PKI. There are 13 functional and five assurance enhancements. Additionally, PKI functionality will be expanded to the SIPRNet

APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N /BA-7 Operational Systems Dev</b>	PROGRAM ELEMENT NUMBER AND NAME <b>0206313M Marine Corps Communications Systems</b>	PROJECT NUMBER AND NAME <b>C2510 MAGTF CSSE &amp; SE</b>
<p>(U) Related RDT&amp;E: Not Applicable.</p> <p><b>(U) D. ACQUISITION STRATEGY:</b></p> <p><b>Marine Corps Hardware Suites (MCHS):</b> To insure computer hardware in the operating forces keeps pace with industry computer hardware technical improvements.</p> <p><b>GCSS-MC:</b> Is a portfolio of systems. The approach is to enable Marine Corps Logistics Modernization through two main programs, Logistics Chain Management (LCM) and Logistics Command and Control (LOG C2). LOG C2 will end in FY06. GCSS-MC will pursue an Evolutionary Acquisition (EA) strategy in order to field operationally suitable and supportable capabilities in the shortest time possible. EA offers the fastest method to field this highest of Advocate priorities and allows for requirements to be time-phased as the users become more familiar with the fielded systems' strengths and weaknesses. In addition to quicker fielding, an EA approach is particularly well suited to software intensive programs and offers these benefits: rapidly delivers an initial capability with the explicit intent of delivering continuously improved capability in the future and reduces "cycle time" from identification of emergent user requirements, priorities and fielding. The GCSS-MC acquisition strategy for each program will be to deliver capabilities in Blocks. Each Block is divided into two main phases: Planning/Blueprinting and Realization/Transition. More substantial software improvement/system upgrades will be fielded with each Block, as required and prioritized by the user commur Blocks will include emergent user priorities, advanced technology improvements and expanded functionality. Each Block will repeat the complete acquisition program cycle starting with Milestone (MS) A for the first Block for LCM and MS B thereafter going through a MS C Full Rate Production Decision Review (FRPDR) for each Block. LCM is an ACAT IAM program. LCM has passed MS A. The tentative date are for LCM MS B is during the 1st quarter FY07 and MS C during the 4th quarter FY08, with fielding to begin in the 1st quarter FY09 with continued block upgrades thereafter. FOC is validated when all Marine Corps ground components are using capabilities provided by GCSS-MC LCM to include formal schools, and selected Marine Reserve Components and the following systems are no longer used operationally: SASSY, ATLASS II+, ATLASS I, MIMMS, and PC MIMMS.</p> <p><b>Transportation Systems Portfolio:</b> Develop, refine, field, maintain and sustain of two Joint deployment programs—Integrated Computerized Deployment System (ICODES) and Aircraft Air Load Planning System (AALPS); Three Joint Sustainment programs - Cargo Movement Operations System (CMOS), Automated Manifest System - Tactical (AMS-TAC), and Global Air Transportation and Execution System (GATES); and One Bridging Technology Program Warehouse - To - War Fighter (W2W). Support software maintenance and sustainment of our existing legacy systems—MAGTF Deployment Support System II (MDSS II). Prepare applications and programs for GCSS-MC Integration.</p> <p><b>Joint Forces Requirement Generation II (JFRG II):</b> JFRG II develops requirements provided by all services as it becomes necessary. Software is tested for functionality with service users then passed on to DISA for security &amp; interoperability testing and release as a GCCS mission application. This is conducted based on a 6-month release schedule of GCCS, with a 6-month lead time for each JFRG II version release.</p> <p><b>Public Key Infrastructure (PKI):</b> Is a DoD ACAT IAM Program. At the service level, the USMC PKI program has been run as an Advanced Acquisition Plan (AAP). Based on an ASD ADM, DoD PKI development will be conducted through a series of block upgrades. Transition to this approach commences in FY6 with the initiation of Increment 1. This increment will contain two enhancement categories: functional enhancements, changes that result I increased capability or functionality for the PKI and assurance enhancements, changes that result in increased levels of security and assurance and that affects the mitigation of identified risks with PKI. There are 13 functional and five (5) assurance enhancements. Additionally, PKI functionally will be expanded to the SIPERNet.</p>

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

**The Aviation Radar (AN/TPS-59(V)3)** is a national asset. It is the only fielded ground-based sensor which can detect and track long range Air Breathing Targets (ABT) within 300 nautical miles, as well as Tactical Ballistic Missiles (TBM) at ranges of 400 nautical miles for 360 degrees and up to one million feet in elevation. Highly Expeditionary Long Range Air Surveillance Radar (HELTRASR) is the modernization initiative to replace the AN-TPS 59 Radar.

**Ground Weapons Locating Radar (GWLR):** The GWLR is an up-grade to the current AN/TPQ-46A radar. The system will acquire threat indirect fire weapons including mortars, artillery, rocket and missile systems at greater ranges than the current radar. The principle function of the system will be to detect, track, classify and accurately determine the origin of enemy weapon platforms and forward the location data to the counterfire element. The upgrades will focus on achievement of greater detection ranges as well as increased communication, security, and system availability.

**The Multi-Role Radar System (MRRS) is also known programmatically as Ground/Air Task Oriented Radar (G/ATOR).** G/ATOR is a single material solution to fill the MRRS's and Ground Weapons Locating Radar's (GWLR) A160 requirements. It is an Evolutionary Acquisition/Incremental Development Program designed to reduce the Total Ownership Costs associated with the MRRS and GWLR systems. Increment I will fill the MRRS's Short Range Air Defense (SHORAD) mission and medium range Air Surveillance mission. Increment II will fill the GWLR's Counter Fire/Counter Battery missions. Increment III will develop tactical enhancements to Increment I's design. Lastly, Increment IV will fill the Air Traffic Control mission. Programmatically, MRRS and GWLR will merge into a single requirement (G/ATOR) as the requirement documents transition from the Op Requirement Document (ORD) format to the Capability Development Document (CDD) format.

**The Short/Medium Range Air Defense Radar AN/TPS-63B** is a two-dimensional, medium-range, medium altitude, transportable radar system which is doctrinally employed as a tactical gap-filler or as an early warning system for early deployment into the operational area. It has a 360-degree air surveillance capability at a range of 160 miles and complements the co-employed AN/TPS-59(V)3 three-dimensional, long-range, air surveillance radar system. The Short/Medium Range Air Defense Radar will develop engineering change proposals related to improved system performance with the specific purpose of meeting increased fleet operational requirements. AN/TPS-63 modifications and system improvements will be researched and analyzed to determine which complement existing components to preclude an expensive USMC investment in solid-state radar technology.

**TPS-59 HELTRASR Ballistic Missile Defense FY06 Supplemental Title IV** - The Aviation Radar (AN/TPS-59(V)3) is a national asset. It is the only fielded ground-based sensor which can detect and track long range Air Breathing Targets (ABT) within 300 nautical miles, as well as Tactical Ballistic Missiles (TBM) at ranges of 400 nautical miles for 360 degrees and up to one million feet in elevation. Supplemental funding will be used to develop an Engineering Change Proposal to incorporate National Systems Cueing to improve TBM detection capability.

**(U) Related RDT&E:**

(U) PE 0206313M (Marine Corps Communication Systems) PROJECT C9639A PROJECT C9860A

**(U) D. ACQUISITION STRATEGY:**

**(U) Highly Expeditionary Long Range Air Surveillance Radar (HELRSR):** The program office started R&D efforts, to include risk mitigation, contract support and document preparation, that will support development of a 3-D Expeditionary Long Range Radar (3DELRR) capability. The risk mitigation efforts will be applied to the AN/TPS-59 to close the capability gap between the AN/TPS-59 and the 3DELRR requirement.

**(U) AN/TPS-59 Radar Sustainment:** The Program Office intends to address Diminishing Manufacturing Sources (DMS) issues by continuing with the Post Production Support Program (PPSP) and they will also continue R&D efforts that will modernize the radar with advanced technology and performance capabilities. A Business Case Analysis (BCA) was completed which incorporated two independent obsolescence/DMS studies that identified critical components which will severely impact the system performance and readiness. Based upon the BCA, the program office intends to sustain systems. The refurbishing and sustaining of systems will extend system life cycle and lower the radars' overall operating cost and maintain the supporting establishment.

**(U) Ground Weapons Locating Radar (GWLR):** GWLR is a sustainment and upgrade program for the current AN/TPQ-46A radar. The upgrade will be accomplished through a series of engineering change proposals (antenna transceiver group re-cap, Radar Processor re-host, and the lightweight computer unit replacement). Engineering Change Proposals (ECPs) will be conducted by the equipment Primary Inventory Control Agent (PICA) (Army PM Firefinder) with USMC participation. Joint procurement of hardware will realize economy of scale savings and ensure common configuration. Army and Marine Corps Depot facilities will be utilized to perform hardware installation. Purpose of the upgrade is to enhance performance and availability.

**(U) The Ground/Air Task Oriented Radar (G/ATOR),** formerly known as Multi-Role Radar System MRRS, is an Evolutionary Acquisition / Incremental Development Program. G/ATOR is comprised of four Increments which will fill the MRRS and GWLR requirements. Four legacy systems (TPS-63, MPQ-62, TPS-73/79 and TPQ-46A ) will be replaced by a single material design that offers an opportunity to reduce development cost and combine training & logistics assets. MRRS Authorized Acquisition Objective (AAO) is 41 systems replacing the TPS-63, MPQ-62 and TPS-73/79 systems as well as additional systems in support of the SHORAD mission (CLAWS weapon cue); GWLR's AAO is 22 systems, a one for one replacement of the TPQ-46A. The Increment System Development & Demonstration (SDD) phases are staggered to allow for technology insertion due to obsolescence and technology growth issues. Early Increment I builds will be back fitted to current then year technology as required. As they become available, Increment III Tactical Enhancements will parallel field to then year Increment I builds and back fitted to earlier builds. A single Engineering Development Model (EDM) will be developed during Increment I's SDD phase and flowed down to support later increments.

**(U) SHORT/MEDIUM RANGE AIR DEFENSE RADAR:** This effort requires R&D funds to develop modifications to keep the Short/Medium Range Air Defense Radar System's electronics and hardware viable and safe, providing sustainment for the fielded system. Efforts are underway to award a sole source Engineering Services and procurement contract with the AN/TPS-63's Original Equipment Manufacturer, Northrop Grumman. The main focus of the contract will be the development and procurement of replacement sub-assemblies currently identified as containing obsolete components, as well as those assemblies experiencing reliability, maintainability and safety related issues.

**(U) E. MAJOR PERFORMERS:**

(U) Lockheed Martin Corp, Syracuse, NY. Contract awarded in 2005 for AN/TPS-59 to develop ECPs for software improvements and DMS issues. FY05, FY06, FY07 and FY08 project contract with LMC in Jan of each year to develop ECPs for software improvements.

(U) Sensis Corp was awarded the contract in 2006 to support risk mitigation efforts for the 3DELRR requirement (AN/TPS-59 system development risk mitigation).

(u) Lockheed Martin Corp, Syracuse, NY, Sensis Corp and Anteon Corp. are G/ATOR prime contractors

<p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p><b>MetaData C9276</b> - Metadata technology incorporates the first data language. It serves as the “brain” and is the enabling component of the Metadata products.. The technology array solves the above-identified problems by commonly defining and modeling data meanings, functions, and relations; creating an intelligent database with pre-loaded data conditions and automatically merging new real-time data; enabling all data structures to be stored using a finite set of data relations; preparing data for a variety of mission specific tool sets; delivering a database that can search itself; enabling users to access data in a common way; and providing A single database design for all applications.</p> <p><b>Improved Ground Based Transportable Radar C9639(IGBTR)</b> – Expeditionary radars will require a smaller antenna than the current AN/TPS-59. Radar antenna size is dependent on the power level of the transmitters used. Funding will support a risk mitigation effort to develop high power transmitter/receiver assemblies.</p> <p><b>Global Command and Control System is USMC Battlefield Fusion C9640</b> - is the dynamic effort to combine and coordinate the effects of all Electronic Warfare (EW) assets, present and future, that reside in any given area of operation. Ideas to facilitate this include the creation of a combined EW trainer and the use of common software/hardware solutions/applications for EW systems coordination. The results of this endeavor will better use and economy of legacy and new and emerging EW platforms. The effort will be used by Communication Emitters Sensing Attacking System (CESAS) operators to continuously calculate electromagnetic wave emission and propagation, antenna beam shape, scan patterns, and emitter audio. It will provide necessary training in the Techniques, Tactics, and Procedures required to attack, in a realistic training environment, targets of interest.</p> <p><b>Ground//AirTask Oriented Radar G/ATOR C9860 - Ground/Air Task Oriented Radar (G/ATOR)</b> –The G/ATOR program will develop an procure 41 air component radar systems and 22 ground component radar systems. The radar system is a 3-Dimensional, HMMWV-mounted short to medium range radar designed to detect targets such as cruise missiles, Air Breathing Targets, rockets, mortars and artillery. It is an all-in-one rapidly deployed system that replaces four existing systems with better performance, Combat Identification, reduced logistical footprint, increased mobility and reduces O&amp;M costs through commonality of maintenance concepts and parts. The system will provide supplemental 3-Dimensional radar coverage for those areas out of view of the fielded AN/TPS-59(V)3 Radar system due to terrain masking. The supplemental funding will allow the Marine Corps to begin the development of an additional Engineering Development Model to help mitigate technical risk for Increment II.</p> <p><b>Marine Corps Composite Tracking Network Engineering Development (CTN)</b> – The MC Composite Tracking Network Eng/Dev Systems funds are required to provide non-personal technical services. The services consist of design engineering, systems integration, program management, logistics, test management, test support, and technical documentation to develop and demonstrate equipment to physically remote a phased array antenna from its associated terminal (radio).</p> <p><b>Simulation Center Infrastructure Program is MC DCGS &amp; Net Centric Center 9862N</b> - DCGS-Distributed Common Ground/Surface System – Marine Corps (DCGS), formerly known as Distributed Common Ground/Surface-Integration (DCGS-1), is a collection of Service Systems that will contribute to joint and combined war fighter needs for Intelligence, Surveillances and Reconnaissance (ISR) support, with the global Information Grid (GIG) providing unconstrained communications circa 2010 to support the Department of Defense (DOD), ISR Enterprise end-state. The DCGS Integrated Backbone (DIB) is the architecture that will tie the Service DCGS systems together into one Family of Systems (FOS). The DIB will provide the tools, standards, architecture, and documentation for the DCGS community to achieve Multi-Intelligence (Multi-INT) (e.g. Imagery Intelligence (IMINT), Signal Intelligence (SIGINT), Measurement/Measuring and Signature Intelligence (MASINT), Counterintelligence/Human Intelligence (CI/HUMINT)), network centric environment with the interoperability to afford individual nodes’ access to the information needed to execute their respective missions.</p>

APPROPRIATION/BUDGET ACTIVITY	PROGRAM ELEMENT NUMBER AND NAME	C9999 CONGRESSIONAL ADDS			
RDT&E, N/BA-7 Operational Sys Dev	0206313M Marine Corps Communication				
<p><b>Training System Modification is Radio Battalion Information Operators Training C9863N</b> - will consist of technical training and support of Marine Air Ground Task Force (MAGTF) information operations cells through specialized classroom instruction, practical application, testing and evaluation of Electronic Warfare units supporting them.</p> <p><b>Recon, Target &amp; Surveillance Veh RST-V C2273 - 9864N</b> - The RST-V is a 4x4 hybrid electric drive vehicle with reconnaissance, surveillance, targeting and C3I (command, control, communications and intelligence) capability coupled with integrated stealth and survivability features. The communications systems include an ITT SINCGARS ASIIP VHF transponder and satellite communications.</p> <p><b>Basic Remote Access Terminal is Remote Tactical Collection &amp; Transmission Sys C9865N</b> - The intent is to procure the Swedish system as a gap filler bandwidth provider to the Radio Battalions (RADBNs). Evaluation of the system will be conducted as a Field User Evaluation (FUE). The SWEDISH family of systems comprise a complete suite of Very Small Aperture Terminals (VSAT) systems and subcomponents that will be used to provide secure, high bandwidth to the Radio Battalions. The initial intent is to provide a 'hub and spoke' delivery concept that will be comprised of a 2.5m system at the Battalion Headquarters and numerous Fly Away, (1.5m system), and Vehicle Based, (.9m system) systems for use during Marine Expeditionary Units (MEU) and Operation Iraqi Freedom (OIF) deployments.</p> <p><b>Battlefield Management System (BMS)/Advanced Situational Awareness System (AS2) C9A87</b> - This add supports the Battlefield Management System (BMS)/Advanced Situational Awareness System (AS2)</p> <p><b>Foliage Penetrating Synthetic Aperture Radar C9A88</b> - This add will support the development of the Foliage Penetrating Synthetic Aperture Radar</p> <p><b>Improved Marine Communications C9A89</b> - This add will support the development of Improved Marine Communications</p> <p><b>Trident - Soldier Training C9A90</b> - This add provides funding for Trident - Soldier Training</p> <p><b>Wireless Tactical Remote Video/Sensor Surveillance System C9A91</b> - Funding for Development of Wireless Tactical Remote Video/Sensor Surveillance System</p>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>This PE provides modification to Marine Corps Expeditionary Ground Force Weapon Systems to increase lethality, range, survivability and operational effectiveness. It also provides for the development of AAV7A1 reliability, maintainability, operational and safety modifications, improvements in command and control in the ADMS, and product improvements to the family of LAVs. The AVTB provides facilities and personnel which perform a broad range of testing, repair and technical services to amphibious vehicles.</p> <p>This program is funded under OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing and manufacturing development for upgrades of existing systems.</p> <p><b>Note:</b></p> <p>* Funds for Project C2315 were realigned from PE 0206313M starting in FY07.</p>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>The Light Armored Vehicle Family of Vehicles (LAV FOV) consists of six fielded LAV configurations, and one communications/intelligence-configured asset on a LAV chassis. The LAV FOV provides a logistically self-contained, highly mobile, and lethal combined arms combat system to the Marine Air-Ground Task Force (MAGTF). The LAV Product Improvement Program funds the development and testing of modifications of four programs; the LAV-Command &amp; Communication (LAV-C2) Upgrade Program, the LAV Lethality Program, the MARINE Personnel Carrier (MARINE PC) Program and the LAV Reliability, Availability &amp; Maintainability (LAV RAM) Program. These programs will ensure that the LAV FOV will be capable of conducting its assigned missions through FY 2025 by enhancing lethality and survivability; reliability, availability, maintainability and durability; as well as reducing operations and support costs. The Marine Personnel Carrier Program will provide mobility for 6 Infantry Battalions with LAV FOV based Infantry Carriers.</p>

<b>EXHIBIT R-2a, RDT&amp;E Project Justification</b>		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RDTE&amp;E, N /BA-7 Operational Sys Dev</b>	PROGRAM ELEMENT NUMBER AND NAME <b>0206623M Marine Corps Ground Combat/Supporting Arms Systems</b>	PROJECT NUMBER AND NAME <b>C1555 Light Armored Vehicle (LAV) PIP</b>
<p><b>(U) D. ACQUISITION STRATEGY:</b> The Marine Personnel Carrier Program (Marine-PC) will provide mobility for 6 Infantry Battalions with LAV FOV based infantry carriers to support Marine Corp Operations and Irregular Warfare Operations, compliant with Strategic Planning Guidance. RDT&amp;E phase to achieve maximum component commonality and C4, survivability and swim capabilities equal to or better than the current LAV fleet. Procurement strategy could be competitive or sole source for 6 General Support LAV Companies of roughly 600 LAV FOV (Marine-PC's, and limited numbers of Command &amp; Controls, Logistics and Recoveries) is planned.</p> <p><b>(U) D. ACQUISITION STRATEGY:</b> The LAV-C2 upgrade will be utilizing commercial off-the-shelf, government off-the-shelf, and non-developmental item hardware and software to provide an integrated suite capable of enhanced voice and data transmissions. The majority of the effort will be the integration of existing hardware and software for this upgrade. To the maximum extent possible, components from both the Marine Corps and Army Common Hardware Suites will be utilized to reduce acquisition and support costs. The system architecture has been determined through a Tailored Executive Analysis. One contractor has been selected to fabricate a prototype which will be subjected to DT/OT.</p> <p><b>(U) D. ACQUISITION STRATEGY:</b> The LAV RAM project funds numerous low-dollar, yet extremely important minor modifications, support equipment and tools and other projects that increase LAV reliability and readiness while simultaneously reducing operations and support costs. The Marine Corps, PM-LAV Sustainment Readiness Team uses multi-disciplined integrated project teams consisting of engineering, logistical, contracting and financial personnel to manage RAM projects. The majority of contracts issued under the RAM line are subject to the competitive acquisition process.</p> <p><b>(U) D. ACQUISITION STRATEGY:</b> The LAV Lethality upgrade will increase the lethality of the LAV-25's M242 machine gun through the use of depleted uranium (DU) ammunition during combat operations. The Bradley Fighting Vehicle (BFV) uses the M242 and currently has the capability to fire DU ammunition. PM, LAV will buy existing standard components for the M242 and have them installed. A sole source contract will be initiated with Raytheon to insert the DU firing tables into the Improved Thermal Sight System utilized by the LAV-25. This contract will also include taking the Army's existing technical manual (TM) data on the upgraded M242 components and incorporate it into the LAV-25 TM data base.</p> <p><b>(U) E. MAJOR PERFORMERS:</b></p> <p><b>Marine-PC</b></p> <p>FY08-FY09 TBD</p> <p><b>LAV RAM</b></p> <p>FY06-FY09 Various</p> <p><b>LAV C2 Upgrade</b></p> <p>FY06 Lockheed-Martin Systems Integration, Owego, NY. Prototype Fabrication. Apr 06. Yuma Proving Grounds/Electronic Proving Grounds, Yuma, AZ. Developmental Testing. Sep 06.</p> <p>FY07 Yuma Proving Grounds/Electronic Proving Grounds, Yuma, AZ. Operational Testing. Jan 07.</p> <p><b>LAV LETHALITY</b></p> <p>FY07 Raytheon Company, McKinney, TX. Integration of Depleted Uranium firing tables into Improved Thermal Sight System (ITSS). <b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>(U) This project develops joint and Marine Corps unique improvements to infantry weapons technology, improvements for Night Vision Equipment, Rifle Combat Optics, Family of Individual Optics, Thermal Weapons Sight, Small Unit Remote Scouting System (SURSS) and monitors national and international weapons development. NOTE: SURSS has been moved to C2273 in PE 0206313M in FY08 and beyond.</p> <p>(U) MARINE CORPS AIR GROUND COMBAT CENTER (MCAGCC) RANGE INSTRUMENTATION: Converges training occurring at the Marine Air Ground Task Force Training Command (MAGTFTC), Twenty-Nine Palms, CA with training of other forces occurring at participating Joint National Training Center (JNTC) ranges and with the standing Joint Task Force (JTF), Suffolk, VA. The Marine Corps JNTC strategy is to integrate Live, Virtual, and Constructive (L-V-C) training environments currently utilized or being developed. FY04 funds developed architecture and interfaces to integrate range instrumentation and simulation to digitally capture dismounted infantry and weapon system platform operations, to record command and control communications for after action, to provide integrated targetry, battlefield effects and Military Operations in Urban Terrain (MOUT) training environments, and designed the protocol transferring the correlated digital exercise picture to other JNTC recipients and the Joint Training and Simulation Center (JTASC) within the Joint Forces Command.</p>

RDT&E Articles Qty										
<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>										
<p><b>Marine Enhancement Program (MEP)</b> provides Research, Development, Test and Evaluation funding for low visibility, low cost items. It focuses on items of equipment which will benefit the individual Marine by reducing the load, increasing survivability, enhancing safety and improving combat effectiveness. The emphasis of the program is on non-developmental item/commercial off the shelf (NDI/COTS) available items which can be quickly evaluated and fielded. This program is coordinated with the Army's Soldier Enhancement Program and the Special Operations Command.</p> <p><b>Marine Expeditionary Rifle Program (MERS)</b> goal and mission is to plan for and treat the infantry rifle squad as a "system" - much as other complex systems - tanks, aircraft, and C4I. This approach ensures integration is designed in, as opposed to being at best an afterthought or worse, handed to the operating forces as stove-piped material solutions are fielded piecemeal. MERS evolved from the old IICS program which was focused on monitoring and keeping pace with the U.S. Army and other soldier as a system programs. MERS is focused on integration issues within the whole squad and is focused on the following activities: 1) Track other Soldier/Marine as a System Initiatives in DoD and throughout the world; 2) Conduct analysis and highlight integration issues with current and future equipment; 3) Strategic Planning - plan for modernization in a coordinated and systematic way; 4) Continue to develop the processes and procedures required to conduct Configuration Management; and 5) Capability Prioritization - ensure we address the capability needs with the Infantrymen's highest priority.</p>										
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
(U) Training simulators supported by this program element include Multiple Integrated Laser Engagement System (MILES 2000), Combined Arms Command & Control Training Upgrade System (CACCTUS), MAGTF Tactical Warfare Simulation (MTWS) Enhancements, and Range Modernization/Transformation (RMT) and Military Operations in Urban Terrain (MOUT). These training systems provide tactical weapons and decision-making skill training from entry level through Marine Air-Ground Task Force (MAGTF) staff level. Systems will be interoperable and will allow for mission planning, mission rehearsal and concept evaluation in a valid synthetic environment with objective, timely feedback. Through live, virtual and constructive simulation, the Marine Corps will have the means to train jointly, educate, develop doctrine and tactics, formulate and assess operational plans, assess warfighting situations and define operational requirements.									
NOTE: FY 05 and FY06 Funding is in PE 0206313M.									
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>0.000</b>	<b>3.018</b>	<b>5.558</b>	<b>6.063</b>

MILES 2000 is the base technology for Range Instrumentation development that is used in Force-on-Force, Free Play, and Force-On-Targets exercises. MILES 2000 is an integral component of Position Location Instrumentation (PLI) providing individual Marine feedback and engagement adjudication. Funds will develop wireless radio frequency detectors belt, integrate MILES Integrated Target Systems (MITS) with Deployable Target System (DTS), integrate Improved Explosive Devices/Battlefield Effect Simulators (IEDs/BES) with the current MILES 2000 and MOUT instrumentation., and integrate Tactical Voice Capture System with MILES 2000.									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>0.000</b>	<b>2.603</b>	<b>3.835</b>	<b>2.600</b>				
RDT&E Articles Qty									
MTWS Enhancements: The MTWS support initiative includes software and system development support, training network infrastructure support, and hardware support to include: develop an HLA interface between MTWS and other simulation models, such as Joint Conflict and Tactical Simulation (JCATS) and other selected models; develop MTWS-C4I interoperability with Command and Control PC (C2PC), Army Field Artillery Tactical Data System (AFATDS), Theater Battle Management Corps System (TBMCS), and Common Aviation Command and Control System (CAC2S); enhanced man machine interface for efficient exercise generation and execution processes, and reduce the number of exercise operators and controllers; refresh computer hardware training suites, and supporting training communication network infrastructure; develop Course of Actions and Analyses (COAA) capability; Rules of Engagement for multi-sided warfare and organizations and Airborne Electronic Warfare and Advanced synthetic natural environment upgrade.

Range Modernization/Transformation (RMT): Funds will provide for the development efforts associated with modernizing major USMC base and station live training ranges by providing enhanced after action review with ground truth feedback, realistic representation of opposing forces (OPFOR) and enhanced range and exercise control capabilities. Integrating live and simulated training technologies, the fielded capabilities enhance live-fire, force-on-target, and force-on-force training. Major system components of modernization include Military Operations in Urban Terrain (MOUT) facilities, inter-active targetry, battlefield effects simulators, individual and vehicle tracking systems, aviation tracking systems, MILES, simulated munitions, integrated simulation, and range control and exercise control information processing and situational awareness displays.

Project Cost		7.583	9.388	10.186	14.195	11.571	11.708	8.794	9.042
<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>The Family of Combat Equipment Support and Services provides research, development, test and evaluation on low cost items with emphasis on non-developmental/commercially available items. Much of the RDT&amp;E is conducted in coordination/concert with other services and joint organizations, and in consideration of RDT&amp;E efforts being pursued by the other services. Items approved for procurement will transition into Procurement Marine Corps and Operations and Maintenance Marine Corps procurement lines for Individual Combat Equipment, Medical Equipment, and Shelters. The focus is to provide state of the art combat equipment (e.g. lightweight helmet, sleeping bags, load bearing systems, etc.), medical equipment (e.g. Authorized Medical Allowance (AMAL)/Authorized Dental Allowance (ADAL), Enroute Care, Mobile Medical Monitors, etc.), and family of shelters (softwall, different frames and fabrics, etc.). The benefit will be reduced logistics, less weight, improved combat effectiveness, better echelon I and II care for Marines, improved individual and unit protection, tactical mobility, etc. The employment of state-of-the art equipment will ensure Marines are equipped with the best items that technology can offer.</p>									
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>									
COST (\$ in Millions)		FY06	FY07	FY08	FY09				
Accomplishment/Effort Subtotal Cost		0.035	0.242	0.555	1.100				
RDT&E Articles Qty									
<p><b>Clothing and Flame Resistant Organizational Gear:</b> Pursue designs, prototyping, user surveys, textile and physical properties testing and the full range of clothing design in response to new uniform initiatives.</p>									
COST (\$ in Millions)		FY06	FY07	FY08	FY09				
Accomplishment/Effort Subtotal Cost		1.849	4.386	5.627	5.858				
RDT&E Articles Qty									
<p><b>Family of Ballistic Protection Systems:</b> Exploration of new commercial technologies that can be inserted into current body armor, to reduce weight, increase survivability, lethality and mobility. Both torso and head/neck ballistic studies will be conducted to assess blunt trauma/shock forces on the body and how ballistic materials/designs can afford the most protection while reducing weight. Modeling and simulation initiatives will baseline current equipment and enable configuration/compatibility management of new equipment.</p>									
COST (\$ in Millions)		FY06	FY07	FY08	FY09				
Accomplishment/Effort Subtotal Cost		0.203	0.117	0.444	0.505				
RDT&E Articles Qty									
<p><b>Family of Improved Loadbearing Equipment:</b> This program supports the Marine Corps requirements for a replacement load bearing system and individual water purifier and supports continual system improvement throughout the life-cycle of the equipment.</p>									
COST (\$ in Millions)		FY06	FY07	FY08	FY09				
Accomplishment/Effort Subtotal Cost		0.077	0.086	0.106	0.117				
RDT&E Articles Qty									
<p><b>Family of Combat Support Equipment:</b> The purpose of the Family of Combat Support Equipment is to enhance or improve unit operational capabilities and enhance unit morale. In addition, some items such as the field tarp and poncho will greatly enhance survivability, mobility and provide significantly improved field equipment to Marines.</p>

<p><b>Family of Mountain Cold Weather Clothing &amp; Equipment (FMCWCE):</b> FMCWCE will provide a capability set of clothing and equipment to facilitate Marine Air-Ground Task Force (MAGTF) operations in mountainous and cold weather environments. The intent is to reduce the individual load (weight/volume) of the Ground Combat Element (GCE), particularly dismounted infantry while maintaining or improving system performance. Mobility, survivability and sustainability requirements for the Command Element (CE), Combat Service Support Element (CSSE), and the Air Combat Element (ACE) will also be met. This program will substantially improve current inventory items and add new capabilities such as steep earth and alpine ice equipment for which we train Marines yet have no assets to perform these missions within the operating forces. Rapid technological advances in the outdoor commercial market make it possible to continuously update the capability provided by FMCWCE.</p>					
COST (\$ in Millions)	FY06	FY07	FY08	FY09	
Accomplishment/Effort Subtotal Cost	<b>0.356</b>	<b>0.305</b>	<b>0.241</b>	<b>0.339</b>	
RDT&E Articles Qty					
<p><b>Family of Combat Field Feeding Systems:</b> Improvements on current technology for heating individual rations is being explored to test individual ration heater concepts and equipment. Although some progress has been made in recent years to improve field feeding equipment, most current field messing equipment consists of manpower and maintenance intensive M59 ranges utilizing M2 burners setup within tents. The current Tray Ration Heater System has a large footprint, lacks a quick displacement capability, includes unsafe and hazardous components (specifically the M2 burners), and does not conform to the single fuel concept. Also, this current system is not compatible with tenets of Operational Maneuver from the Sea (OMFTS) and does not facilitate maneuverable warfare operations. Current cookware sanitizing equipment consists of 30 gallon containers used in consonance with immersion water heaters, fueled by gasoline (MOGAS).</p>

**(U) Related RDT&E:** Not Applicable.

**(U) D. ACQUISITION STRATEGY:**

**Family of Ballistic Protection Systems, Family of Mountain Cold Weather Clothing and Equipment, Family of Improved Loadbearing Equipment, Family of Combat Support Equipment, Clothing & Flame Resistant Organizational Gear, and Combat Field Feeding Systems:** Items utilize various acquisition strategies. These programs leverage heavily on current developments and technology in commercial industry. As a result, the government's R&D phase is relatively short. Contracting is performed by either Marine Corps Systems Command Contracting Directorate, the Naval Research Laboratory or the U.S. Army Natick Research, Development & Engineering Center via Indefinite Delivery/Indefinite Quantity (ID/IQ) contracts. ID/IQ contracts are used to decrease the government risk, allow maximum contract flexibility and capitalize on the savings realized by utilizing Economic Order Quantities.

**Shelters:** The Shelter acquisition strategy is to modify non-developmental Items (NDI) to further meet the requirements of the Marine Corps, to support development of multi-service items through inter-service agreements and to adopt Commercial-Off-the-Shelf (COTS)/NDI Marine Corps Specific items.

**Family of Field Medical Equipment:** These programs leverage heavily on current development and technology in the commercial medical industry. The field medical acquisition strategy is to modify non-developmental items (NDI) and adopt Commercial-Off-The-Shelf (COTS) items.

**(U) E. MAJOR PERFORMERS:**

**Family of Ballistic Protection Systems, Family of Mountain Cold Weather Clothing and Equipment, Family of Improved Loadbearing Equipment, Clothing & Flame Resistant Organizational Gear, and Family of Combat Support Equipment:** U.S. Army Natick Research, Development and Engineering Center, Natick, Mass., and the Naval Research Laboratory, Washington DC.

**Shelters:** TBD based on current technologies.

**Family of Field Medical Equipment:** TBD based on current technologies.

**(U) SCHEDULE PROFILE:** Not Applicable.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>HIMARS is a C-130 transportable, wheeled, indirect fire, rocket/missile system capable of firing all rockets and missiles in the current and future Multiple Launch Rocket System Family of Munitions (MFOM). The system includes one launcher, two Re-Supply Systems, and the MFOM. HIMARS will provide the Fleet Marine Force with 24 hour ground-based, responsive General Support/General Support Reinforcing (GS/GSR) indirect fires which accurately engage targets at long range (60+km) with high volumes of lethal fire under all weather conditions throughout all phases of combat operations ashore to include irregular warfare and distributed operations. HIMARS is a significant improvement over currently fielded ground fire support systems. During a 24 hour period the system will be expected to conduct multiple moves and multiple fire missions. HIMARS will satisfy the Marine Corps requirement for an indirect fire system that is responsive, maneuverable, and is capable of engaging targets at long range.</p>

**(U) Related RDT&E:** Not Applicable.

**(U) D. ACQUISITION STRATEGY:**

USMC HIMARS is procuring the Army rocket launcher, the current / future Multiple Launch Rocket System Family of Munitions (MFOM) and developing an Medium Tactical Vehicle Replacement (MTVR)-based Resupply System (truck(s) with associated trailer(s)). The Marine Corps launcher and ammo requirements closely match U.S. Army requirements. The US Army HIMARS program received increased funding so that it is now an Acquisition Category ACAT IC level program. Marine Corps Resupply System requirements are unique. Accordingly, the Marine Corps is an integrator and must ensure the required warfighting capability is fielded to the Marine Corps operating forces. The USMC has aligned funds to reflect an emphasis on not only hardware development, but also the integration of these principle end items while providing associated evaluation and oversight. Additionally, the Marine Corps program is establishing the training and support methodologies that will result in associated skill sets required within the Marine Corps. The Marine Corps strategy is incorporating Evolutionary Acquisition and capability upgrades to both the systems and rocket munitions. These improvements parallel the US Army's acquisition strategy.

**(U) E. MAJOR PERFORMERS:**

- FY-06-07 Lockheed Martin Missile, Dallas, TX. Modifications to Launcher, GMLRS Development**
- FY-06-07 Lockheed Martin Missile, Dallas, TX Systems Engineering Support for Development and testing**

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
(U) This Project develops joint and Marine Corps unique improvements to artillery technology, USMC unique Amphibious Armor Systems (AAS), and international weapons developments.									
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>0.229</b>	<b>0.289</b>	<b>0.296</b>	<b>0.299</b>				
RDT&E Articles Qty									
<b>Family of Artillery Munitions (FAM):</b> Support R&D of ACAAP (Advanced Cannon Artillery) and Excalibur to include approved IM (Insensitive Munitions) and WSESRB (Weapons Systems Explosives Safety Review Board) testing, program support, and travel. Actively monitor U.S. Army artillery ammunition development programs in order to leverage off of and influence army developmental efforts.									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>2.625</b>	<b>1.719</b>	<b>1.757</b>	<b>1.773</b>				
RDT&E Articles Qty									
<b>Fire Support Sustainment:</b> (Formerly known as Fire Support Mods) Joint participation in artillery and fire support improvement projects for legacy systems, i.e., the M198 Howitzer and LW 155mm Howitzer.									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>0.732</b>	<b>0.361</b>	<b>0.380</b>	<b>0.386</b>				
RDT&E Articles Qty									
<b>Fire Support Sustainment - Fielded System Readiness:</b> (Formerly known as Readiness) Joint participation in artillery and fire support improvement projects for replacement capabilities. Projects include the Digital Aiming Circle and more accurate gun laying technology.									
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009				
Accomplishment/Effort Subtotal Cost		<b>0.000</b>	<b>0.308</b>	<b>0.000</b>	<b>0.000</b>				
RDT&E Articles Qty									
<b>Mortar Ballistic Computer (MBC):</b> Integration effort of Government-Furnished Equipment (GFE) software with a common hardware suite (CHS) platform. Prepare for and conduct combined Developmental Testing (DT) and Operational Testing (OT) to include Live Fire User Evaluation. Conduct Interim Progress Review (IPR). Prepare for Milestone C decision. Requirements review to determine evolution to future block upgrades.

<b>(U) Related RDT&amp;E:</b>														
<b>(U) D. ACQUISITION STRATEGY:</b> These programs range from off-the-shelf modifications to developmental items. Fire power enhancement used selected upgrades from Army developmental programs to create a system that more readily meets Marine Corps requirements. EFSS will use an evolutionary acquisition approach fielding a near term capability in FY08 while leveraging emerging technologies to mature the technology by FY09 and beyond.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>The Family of Raid and Reconnaissance Equipment program supports the research, development, and procurement actions for multiple airborne/parachuting and specialized reconnaissance related programs. This line focuses on immediate capability enhancements to numerous insertion and personnel equipment shortfalls currently existing in reconnaissance units throughout the operating forces. This will include improving airborne capability equipment and items for direct action missions that use this specialized raid equipment.</p>									
<b>(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM:</b>									
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009					
Accomplishment/Effort Subtotal Cost	0.810	0.485	0.474	0.000					
RDT&E Articles Qty									
<p>Family of Raids and Reconnaissance Equipment: Integrate logistics to standardize and improve existing close quarters battle and direct action combat equipment and all Marine Corps parachute programs. On-going support to existing items that meet mission requirements for close quarter battle and parachute operations. Development of airborne systems that will allow military parachutists to carry combat equipment in various configurations and a means of supplying/re-supplying combat essentials to Marine units. As part of this effort, options will be explored to replace the M-1 and M-2 Cargo Release Systems. Development on High Altitude High Opening (HAHO) navigation board, improved jumpers helmet, and High Altitude Low Opening (HALO)/HAHO jumpers kit.</p>									
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009					
Accomplishment/Effort Subtotal Cost	0.173	0.192	0.000	0.000					
RDT&E Articles Qty									
<p>Family of Small Craft: Conduct engineering analysis and exploration of enhancements for modifications of the Family of Small Craft programs. The Small Unit Riverine Craft (SURC), Open Water Safety Craft (OWSC), Combat Rubber Reconnaissance Craft (CRRC), Multi-Fuel Engines (MEF), and other small craft items will be supported through FY07.</p>									
COST (\$ in Millions)	FY 2006	FY 2007	FY 2008	FY 2009					
Accomplishment/Effort Subtotal Cost	0.715	0.000	0.537	0.000					
RDT&E Articles Qty									
<p>Underwater Reconnaissance Capability (URC): Concept exploration and development of prototypes for the Tactical Hydrographic Survey Equipment (THSE) will be explored in support of underwater reconnaissance operations.</p>

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

This program element (PE) provides funding for Marine Air-Ground Task Force requirements for Combat Service Support equipment improvement. It will enhance combat breaching capabilities of the ground combat elements, logistics, maintenance and transport

The PE also provides improvements in all areas of Combat Service Support Equipment Vehicles by determining the replacement for the heavy, medium and light fleet vehicles. Alternative Power Sources for Communications Equipment (APSCE) is a suite of device

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
The Logistical Vehicle System Replacement (LVSR) program will replace the current Logistical Vehicle System (LVS) fleet. This vehicle will increase mobility, maintainability, and reliability for the heavy fleet, while increasing off-road payload. Three LVSR variants will replace the current five LVS variants. The cargo variant will be fielded prior to the LVSR 5th Wheel and Wrecker variants which will be options on the LVSR cargo variant production contract. The Flatrack Refueling Capability (FRC) program will replace the M970 Semi-Trailer refueling in both the Force Service Support Group (FSSG) and the Marine Air Wings (MAWs) for ground refueling missions.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>										
<p>A. This project includes improvements in all areas of Combat Service Support Engineering Equipment. This will sustain the technological currency of the M1A1 Main Battle Tank and the M88A2 Recovery Vehicle while concurrently addressing equipment deficiencies, obsolesced components, and/or opportunities to reduce total ownership costs. The program includes joint evaluations and development of modifications, component enhancements and advanced subsystems involving automotive, fire control, survivability and combat identification. The Joint Assault Bridge (JAB), formerly Expeditionary Assault Bridge (EAB) is a tracked engineer vehicle that provides the Marine Air Ground Task Force (MAGTF) with a survivable, deployable and sustainable 18.3 meter wet/dry gap crossing capability. The JAB is comprised of an M1A1 chassis, a modified BR90 bridge launcher, an Embedded Diagnostics System, and Cameras to aid crew visibility. The JAB will provide crew protection and vehicle survivability while having the speed and mobility to keep pace with the maneuver force.</p>

<p><b>Joint Assault Bridge (JAB):</b> Begin system integration with M1A1 tank chassis, BR90 bridge launcher, and MLC70 assault bridge to build first article JAB demonstrator. JAB is an armored vehicle used for rapidly employing, short-gap, assault crossing system, capable of spanning natural and manmade obstacles up to 60 feet (18.29) while under fire for up to Military Load Class (MLC) 70-ton vehicles. The JAB consists of a rebuilt and upgraded M1A1 Tank chassis with existing MLC70 scissors bridge and a modified BR90 launcher. The JAB will provide the MAGTF with the capability to conduct assault and tactical wet and dry gap crossings in all types of climate and terrain, including slopes, trenches and vertical steps. The M1A1 based vehicle will provide the survivability, maintainability, and maneuverability required to keep pace with the maneuver force.</p>

- (U) PE 0206313M Marine Corps Communications

**(U) D. ACQUISITION STRATEGY:**

(U) The **M1A1 Tank MOD** and **Safety Mods** programs leverages Army developmental programs to create a system that more readily meets Marine Corps requirements. Modification includes safety, reliability, and technology up-grades to meet Marine Corps requirement. M1A1 Tank MOD will exercise options on existing contracts of varying types to conduct research and analysis associated with the development of modifications to the M1A1 Tank and supporting platforms.

(U) **Joint Assault Bridge (JAB):** Begin system integration with M1A1 tank chassis, BR90 bridge launcher, and MLC70 assault bridge to build first article JAB demonstrator. JAB is an armored vehicle used for rapidly employing, short-gap, assault crossing system, capable of spanning natural and manmade obstacles up to 60 feet (18.29) while under fire for up to Military Load Class (MLC) 70-ton vehicles. The JAB consists of a rebuilt and upgraded M1A1 Tank chassis with existing MLC70 scissors bridge and a modified BR90 launcher. The JAB will provide the MAGTF with the capability to conduct assault and tactical wet and dry gap crossings in all types of climate and terrain, including slopes, trenches and vertical steps. The M1A1 based launcher will provide the survivability, maintainability, and maneuverability required to keep pace with the maneuver force.

**(U) E. MAJOR PERFORMERS:**

- JAB - Anniston Army Depot, Anniston, Alabama
- JAB - BAE Land Systems, New Castle, United Kingdom

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Alternative Power Sources for Communications Equipment (APSCE) program is a suite of devices that provides the commander with the capability to use existing power to operate communication equipment, computers and peripheral equipment instead of using batteries or fossil fuel generators.

The Marine Corps Family of Automatic Test Systems (ATS) (formerly called Third Echelon Test Sets (TETS)), provides automatic test program capability for use by technicians both in Garrison and the forward edge of the battlefield; specifically in the area of interactive electronic tech manuals, condition/predictive based maintenance, embedded sensors and prognostics.

The Marine Corps Automatic Test Equipment (MCATE) program provides development of sustainment technology for automatic test equipment used in organizational/intermediate maintenance facilities. The Autonomic Logisitics (AL) program provides weapon system sensor data collection and processing for information conversion to provide situational awareness. FY-06 effort will focus on developing system, operational, and technical architectures for condition based maintenance for Marine Corps Ground Weapon Systems. FY-07 efforts will develop Low Rate Initial Production (LRIP) system health hardware and software for Marine Corps weapon systems.

**(U) B. ACCOMPLISHMENTS/PLANNED PROGRAM**

During FY-06 the AL program will conduct R&D efforts to explore collection & processing of system health data from weapon systems sensor and digital data buss structures for system health information. Work will include diagnostic and prognostic algorithm development. FY-07 R&D efforts will focus on system health application for legacy weapon systems that are not supported with digital sensors or data buss structures. Conduct developmental test and evaluation of platform level system health hardware and software.

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

AIM-9X (Sidewinder) is a long-term evolution of the AIM-9, a fielded system, qualifying this as a research category operational systems development. The AIM-9X short range Air-to-Air missile modification program provides a launch and leave, air combat munition that uses passive infrared (IR) energy for acquisition and tracking of enemy aircraft and complements the Advanced Medium Range Air-to-Air Missile. Air superiority in the short range Air-to-Air Missile arena is essential and includes first shot, first kill opportunity against an enemy employing IR countermeasures. The AIM-9X employs several components common with the AIM-9M (fuse, rocket motor and warhead). Improved Anti-Tamper features are being incorporated to protect improvements inherent in AIM-9X design.

Schedule: Schedule changes due to range and aircraft availability. DT-IIIB testing delays due to the QF-4 drones availability. Subsequently, this has delayed the start of OT-IIIB which depend ended upon DT completion. DT/OT-IIIC and IIID were also moved to reflect changes to Block II integration schedule. This will consist of to re-hosting SW into Block II missiles during DT-IIID.

Technical: Not Applicable

This joint Navy/Air Force program is structured in response to the Joint Service Operational Requirement and Mission Element Need Statement to develop an air superiority air-to-air missile with significant improvements in operational utility and combat effectiveness. This program supports the integration of the AMRAAM into Navy aircraft with analysis of Navy unique applications, aircraft missile integration tasks, product improvement efforts including missile software upgrade development and procurement of hardware to support Navy test and evaluation tasks.

Schedule:					
AIM-120C-7 operational testing (OT) revealed a fuze anomaly, with a correction to be incorporated via the C-7 SWUP program. The re-testing of this correction, plus a reassessment of the time needed to complete the remaining OT missions, analyses, and reporting, have extended the projected end-date of the C-7 OT schedule until July 07.					
AIM-120C-7 SWUP development completion has slipped from Jun 06 to Sep 06 to permit developmental flight testing of a correction to a fuze issue identified during C-7 OT					
The US Marine Corps CLAWS program has been cancelled.					
Phase 4 program issues led to a restructured schedule, approved by the AF and Navy PEOs in Mar 06. The revised SDD completion reflects a delay of 15 months from the original plan. There is a corresponding slip in the DT flight test schedule. The OT flight test schedule reflects both the SDD delay, plus an updated estimate in the overall time (16 months vs 12 months) to complete the OT flight test program. Delay in the IOC dates is due to the revised OT schedule and a revised production plan, also approved by the PEOs, which delays delivery of inventory tactical missiles until late FY09. Phase 4 SIP/SWUP has been rephrased based on the delay in IOC dates.

D. ACQUISITION STRATEGY:														
<p>An updated Long Term Pricing Agreement (LTPA) strategy was approved at the March 2006 Executive Program Management Review (EPMR). During the EPMR both the Air Force and Navy PEOs approved a stand alone buy of 71 AIM-120C7, AIM-120D Captive Air Training Missiles (CATM), and 12 AIM-120D Operational Test (OT) missiles in FY06; a stand alone buy in FY07; and a 3 year LTPA for the years 2008-2010. The Air-to-Air Wing Program Office will need to revisit the EPMR for missile mix in FY07, and again in FY08 for the production cut-in decision (estimated for Spring 2008).</p>

<p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b> Future joint forces will be responsive, deployable, agile, versatile, lethal, survivable, and sustainable. The nation will need lift assets that can provide for assured access, decrease predictability and dwell time, and have the capacity to quickly deliver troops and equipment together in a manner that provides for unit integrity. Joint High Speed Vessel (JHSV) will provide combatant commanders high-speed intra-theater sealift mobility with inherent cargo handling capability and the agility to achieve positional advantage over operational distances. Not limited to major ports, the JHSV will be able to operate in austere port environments.</p> <p><b>B. **A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: (3131) Intratheater Connectors** - The Joint High Speed Vessel Program is a Navy led acquisition for a high-speed, shallow draft, commercial-based ship capable of intra-theater personnel and cargo lift for the Armed Services. The ship is not intended to be a combatant and must operate in benign or secured environments. The technologies supporting this capability were evaluated during the completed Analysis of Alternatives. The design parameters associated with the desired capability are:

- Speed: over 35 knots
- Payload: 600 short tons, 20000 sq ft
- Range: 1200 nm loaded, 4500nm unloaded
- Pax: 312
- Single spot flight deck to support H-60
- C4I suite for situational awareness and basic planning
- Commercial Survivability (SOLAS and T-Ship AT/FP)
- Non-developmental systems
- PANAMAX
- Austere Ports: access length less than 450 ft, draft less than 15 ft

9B14N				
NAWC Asset Visibility Business Process Imprvmt	0.000	1.992		

(U) FY 2007 - The add is to provide funding for NAWC Asset Visibility Business Process Improvement.

	FY 06	FY 07	FY 08	FY 09
9858C/9858N				
Navy Automatic Identification Technology	3.263	2.491		

(U) The Navy Automatic Identification Technology (AIT) Engineering Support Center (ESC) allows the Navy to incorporate AIT technologies and processes into the upfront planning of ship and aircraft acquisition programs, expeditionary forces, logistics, special operations forces, and all maintenance communities. Navy AIT ESC establishes the infrastructure for core life-cycle support to preclude redundancy and promote standardization as differing Navy organizations institute AIT-enabled systems/processes. AIT is a rapidly developing capability and its introduction and use must be coordinated throughout the Navy to ensure the most appropriate and cost-effective technologies are adopted. The Navy AIT ESC will operate as a Navy Service Office, administratively supported by the Naval Supply Systems Command (NAVSUP) Headquarters.

	FY 06	FY 07	FY 08	FY 09
9813N				
National Shipbuilding Research Program	0.000	14.943		

(U) FY 2007 - The add is to provide funding for various shipbuilding and ship repair technology development projects specifically focused on reducing the cost of Navy ship design, construction and repair through NSRP. The NSRP is an industry directed, Navy co-sponsored, cost sharing, collaborative shipbuilding technology research consortium focused on reducing the cost of Navy shipbuilding and ship repair. It utilizes a unique legal mechanism which allows cooperation across the U.S. shipbuilding industry, while avoiding anti-trust concerns. It is structured as a collaboration of eleven major U.S. shipyards focused on industry-wide implementation of solutions to multi-yard, multi-program common cost drivers.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) The Navy Multiband Terminal (NMT) Program is the required Navy component to the Advanced Extremely High Frequency (AEHF) Program for enhancing protected and survivable satellite communications to Naval forces. The NMT system provides an increase in single service capability from 1.5 Megabits per second (Mbps) to 8 Mbps, increases the number of coverage areas and retains Anti-Jam/Low Probability of Intercept (A/J, LPI) protection characteristics. It is compatible with today's Navy Low Data Rate/Medium Data Rate (LDR/MDR) terminals and will sustain the Military Satellite Communications (MILSATCOM) architecture by providing connectivity across the spectrum of mission areas, to include land, air and naval warfare, special operations, strategic nuclear operations, strategic defense, theater missile defense, and space operations and intelligence. The NMT system will replenish and improve on Navy terminal capabilities of the Military Strategic, Tactical &amp; Relay (MILSTAR), Defense Satellite Communications System (DSCS), Wideband Gapfiller System (WGS) and Global Broadcast System (GBS) systems. The new system will equip the warfighters with the assured, jam resistant, secure communications as described in the joint AEHF Satellite Communications System Operational Requirements Document (ORD). Mission requirements specific to Navy operations, including threat levels and scenarios, are contained in the ORD. The NMT will provide multiband Satellite Communications (SATCOM) capability for ship, submarine, and shore platforms.</p> <p>(U) The Joint Ultra High Frequency (UHF) Military Satellite Communications (MILSATCOM) Network Integrated (JMINI) Control System provides replacement of all non-Chairman Joint Chiefs Staff Instruction (CJCSI) 6251.01 UHF MILSATCOM legacy equipment at Naval Computer &amp; Telecommunications Area Master Station (NCTAMS) Atlantic (LANT), NCTAMS Pacific (PAC), Naval Computer &amp; Telecommunications Station (NCTS) Naples and NCTS Guam; also replaces non-supportable aging WSC-5 terminals. Provides centralized control of full UHF Follow-On (UFO) satellite constellation. Expands channel control capacity with Digital Modular Radio (DMR) at NCTAMS/NCTS; each site will control up to 152 non-processed UHF MILSATCOM channels in adjacent satellite coverage areas using both physical and virtual channel control techniques. Remains backward compatible with all versions of all Demand Assigned Multiple Access (DAMA) waveforms; supports future waveform modifications and additions. Implements decentralized management of UHF SATCOM communications assets. Automated planning and management of UHF MILSATCOM resources with the Network Management System (NMS). Maintains planning reference data: terminals, networks, configuration codes. Defines and ranks communication service requirements. CJCSI 6251.01 Rev B states MILSTD-188-181C/182B/183B (Integrated Waveform or IW) as optional waveforms for terminals. This requires mandatory implementation into JMINI Control System. The FY 2008 funding supports joint services development with Defense Information Systems Agency (DISA) for Integrated Waveform Technology and software development into JMINI control system architecture. Effort will entail system prototyping, Developmental Testing (DT), and waveform compliance testing. Beginning in FY 2009, funding supports development of next generation JMINI control system to replace non-supported equipment, reduce system components, support technology insertion and system re-architecture.</p>								

<b>CLASSIFICATION:</b>		
EXHIBIT R-2, RDT&E Budget Item Justification		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RESEARCH DEVELOPMENT TEST &amp; EVALUATION, NAVY /</b>	<b>BA 7</b>	R-1 ITEM NOMENCLATURE 0303109N Satellite Communications (Space)
<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>		
<p>(U) The Sensitive Compartmented Information Networks (SCI Networks), is an evolutionary acquisition program designed to provide enabling technology necessary to provide Intelligence, Cryptologic, and Information Warfare Systems with protected and reliable delivery of Special Intelligence (SI)/SCI data through a secure, controllable network interface with the Automated Digital Network System (ADNS) architecture. Specifically, SCI Networks shall ensure the availability of networks in defiance of hostile Information Warfare (IW). Technical, physical, and procedural security will be used to control access, protect Department of Navy (DoN) information technology resources, and ensure continuous operation of the system within an accredited security posture. This network connectivity will greatly expand the capability of cryptologic and intelligence personnel to fully interact with shore based nodes to provide expanding support to their commanders, including situational awareness, Indications and Warning (I&amp;W), enemy force intentions, intelligence preparation for the Battlefield, and Battle Damage Assessment (BDA). The SCI Networks will provide real time indications and warning support to joint and component commanders through reliable high-speed transfer of sensor data and intelligence information. Enhanced interoperability with other services, agencies, and allies will permit a level of integration of Sensitive Information (SI) operations not achievable with current systems.</p> <p>(U) Manage and resource / coordinate resourcing of experiments and pilot testing of Internet Protocol version 6 (IPv6) technologies to reduce acquisition and operational risk associated with the IPv6 Transition. Experiments identified are in direct support of and identified in the Navy Technical Transition Strategy for IPv6. Prepare several test facilities and produce test events to determine applicability of IPv6 technologies to support the needs of operational Navy through Tactical Networks, Wireless Networks, and the forthcoming Computing and Network Enterprise System (CANES) networking program.</p> <p>(U) The Mobile User Objective System (MUOS) program provides for the development of the next generation Department of Defense (DoD) advanced narrowband communications satellite constellation. The current Ultra-High Frequency (UHF) Follow-On (UFO) constellation is projected to degrade below acceptable availability parameters in 2008. The MUOS program is funded to the August 2004 Operational Requirements Document (ORD).</p> <p>(U) This MUOS RDT&amp;E effort supports an Under Secretary of the Air Force (USecAF) approved Initial Operational Capability (IOC) in 2010 and Full Operational Capability (FOC) in 2014. A MUOS Risk Reduction &amp; Design Development (RRDD) contract was awarded in September 2004 to Lockheed Martin after Key Decision Point (KDP) B. The approval at KDP-B in September 2004 officially designated the MUOS Program as a Department of Defense Space Major Defense Acquisition Program. FY 2006-FY 2009 MUOS efforts are focused on Critical Design Review (CDR), beginning work on the spacecraft engineering development models, and fabrication, assembly, integration and test of the first two satellites. In addition, efforts will include the design, development, fielding and testing of the ground segment. The funding for FY 2007 and FY 2008 also includes software development for Ultra-High Frequency (UHF) Follow-On (UFO) Telemetry, Tracking and Command (TT&amp;C) Terminal upgrades due to parts obsolescence, advanced planning, and engineering for the terminal installation, as well as the procurement and installation of two prototype terminals.</p> <p>(U) The Navy Transformational Communications (TC) Terminal Satellite Communications (SATCOM) program provides for the development and production of terminals to provide high capacity reliable, low probability of intercept (LPI), Anti-Jam (AJ), communications capability to the fleet. Terminals will support multiple data streams over Q-band, Ka-band, and X-band. The terminals will also support mesh networking without the need for gateway terminals. Development will focus on a Local Area Network (LAN) to Antenna capability, including quality of service required for Navy unique missions. Advanced Wideband System/Transformational Communications (AWS/TC) Program draft acquisition strategy consists of terminal suite development and environmental qualification, on-orbit testing, platform integration and test, software enhancements and regression testing throughout the life of the program.</p> <p>(U) The Joint Integrated System Technology for Advanced Networking Systems (JIST-NET) project is an ongoing effort to integrate, develop, and support Satellite Communication (SATCOM) (Military and Commercial) multi-spectrum communications planning, management, and control capabilities that interface with many mono-spectral planning and management tools and with advanced planning tools. The project was realigned to Program Executive Office for Command, Control, Communications, Computers, Intelligence and Space (PEO C4I &amp; Space) from the United States Air Force starting in FY 2004. This project includes conducting JIST-NET software development and engineering analysis. The project is currently in the system development and demonstration phase; and has been approved as a pre-acquisition project. The long-term goal is to provide dynamic real time or near real time apportionment, allocation, and adjudication of satellite resources for the warfighters based on priorities and requirements as assigned by the Operational Command.</p> <p>(U) The Covert Communications Information Transfer (CCIT) program addresses the evolving special communication requirements of Naval Special Warfare and Expeditionary Force missions including covert communications required for operational utilization. FY 2006 further refined candidate technologies into modular, scalable, deployable CCIT capabilities deployed to Special Operations Forces.</p>

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) The Navy Multiband Terminal (NMT) Program is the required Navy component to the Advanced Extremely High Frequency (AEHF) Program for enhancing protected and survivable satellite communications to Naval forces. The NMT system provides an increase in single service capability from 1.5 Megabits per second (Mbps) to 8 Mbps, increases the number of coverage areas and retains Anti-Jam/Low Probability of Intercept (A/J/LPI) protection characteristics. It is compatible with today's Navy Low Data Rate / Medium Data Rate (LDR/MDR) terminals and will sustain the Military Satellite Communications (MILSATCOM ) architecture by providing connectivity across the spectrum of mission areas, to include land, air and naval warfare, special operations, strategic nuclear operations, strategic defense, theater missile defense, and space operations and intelligence. The NMT system will replenish and improve on Navy terminal capabilities of the Military Strategic, Tactical &amp; Relay (MILSTAR), Defense Satellite Communications System (DSCS), Wideband Gapfiller Satellite (WGS) and Global Broadcast Systems (GBS). The new system will equip the warfighters with the assured, jam resistant, secure communications as described in the joint AEHF Satellite Communications System Operational Requirement Document (ORD). Mission requirements specific to Navy operations, including threat levels and scenarios, are contained in the ORD. The NMT will provide multiband Satellite Communications (SATCOM) capability for ship, submarine, and shore platforms.</p> <p>(U) The New-Start Commercial SATCOM terminal will support satellite communications terminals and shore connectivity to the Navy Points of Presence through the use of Commercial Off the Shelf (COTS) terminals and commercial satellite land earth stations and terrestrial fiber services.</p>

(U) First and second phases of Navy Multiband Terminal (NMT) development for System Design and Development (SDD) for ship, shore and submarine platforms.  
 (U) **FY 2006:** Continued NMT hardware and software development of 8 Software Communications Architecture (SCA) compliant prototype terminals. Continued high level test plan. Additional Software Development required to ensure legacy equipment, utilized by NMT program, will meet Advanced Extremely High Frequency (AEHF) Satellite System requirements.  
 (U) **FY 2007:** Complete terminal hardware and software development for 8 SCA compliant NMT prototypes. Perform over-the-air testing of NMT prototypes and conduct vendor down-select. Commence design and development of 20 Q/Ka capable Engineering Development Models (EDMs) and added X-band for submarine platforms. EDM test sets are required at the following sites: one set at contractor facility for testing, one set shared between East/West coast government facilities for program and joint interoperability testing, and one set for operational assessment on platforms. Each set is composed of two ship, one sub, and one shore terminal configurations. In addition, eight EDMs are planned as 1st of class platform installations for unique environmental testing and production phase risk reduction.  
 (U) **FY 2008:** Continue design and development of 20 Q/Ka capable EDMs, added X-band for submarine and X/Ka kits for ships. Additional security measures will be incorporated into the terminal software and hardware to support DoD Information Technology Security Certification and Accreditation Process (DITSCAP) certification prior to EDM fielding for DT/OT.  
 (U) **FY 2009:** Complete design and development of 20 Q/Ka capable EDMs and added X-band for submarines and continue development of X/Ka upgrade kits for ships. Additional security measures included in terminal software and hardware will be incorporated and tested via DITSCAP testing. EDMs will be delivered and installed on ship and submarine platforms and a shore site to support DT/OT and preparations for MS C.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>									
<p>(U) The Joint Ultra High Frequency (UHF) Military Satellite Communications (MILSATCOM) Network Integrated (JMINI) Control System provides replacement of all non-Chairman Joint Chiefs Staff Instruction (CJCSI) 6251.01 UHF MILSATCOM legacy equipment at Naval Computer &amp; Telecommunications Area Master Station (NCTAMS) Atlantic (LANT), NCTAMS Pacific (PAC), Naval Computer &amp; Telecommunications Station (NCTS) Naples and NCTS Guam; also replaces non-supportable aging WSC-5 terminals. Provides centralized control of full UHF Follow-On (UFO) satellite constellation. Expands channel control capacity with Digital Modular Radio (DMR) at NCTAMS/NCTS; each site will control up to 152 non-processed UHF MILSATCOM channels in adjacent satellite coverage areas using both physical and virtual channel control techniques. Remains backward compatible with all versions of all Demand Assigned Multiple Access (DAMA) waveforms; supports future waveform modifications and additions. Implements decentralized management of UHF SATCOM communications assets. Automated planning and management of UHF MILSATCOM resources with the Network Management System (NMS). Maintains planning reference data: terminals, networks, configuration codes. Defines and ranks communications service requirements. CJCSI 6251.01 Rev B states MILSTD-188-181C/182B/183B (Integrated Waveform or IW) as optional waveforms for terminals. This requires mandatory implementation into JMINI Control System. The FY 2008 funding supports joint services development with Defense Information Systems Agency (DISA) for Integrated Waveform Technology and software development into JMINI control system architecture. Effort will entail system prototyping, Developmental Testing (DT), and waveform compliance testing. Beginning in FY 2009, funding supports development of next generation JMINI control system to replace non-supported equipment, reduce system components, support technology insertion and system re-architecture.</p> <p>(U) The Sensitive Compartmented Information Networks (SCI Networks), is an evolutionary acquisition program designed to provide enabling technology necessary to provide Intelligence, Cryptologic, and Information Warfare Systems with protected and reliable delivery of Special Intelligence (SI)/SCI data through a secure, controllable network interface with the Automated Digital Network System (ADNS) architecture. Specifically, SCI Networks shall ensure the availability of networks in defiance of hostile Information Warfare (IW). Technical, physical, and procedural security will be used to control access, protect Department of Navy (DoN) information technology resources, and ensure continuous operation of the system within an accredited security posture. This network connectivity will greatly expand the capability of cryptologic and intelligence personnel to fully interact with shore based nodes to provide expanding support to their commanders, including situational awareness, indications and warning (I&amp;W), enemy force intentions, intelligence preparation for the Battlefield, and Battle Damage Assessment (BDA). The SCI Networks will provide real time indications and warning support to joint and component commanders through reliable high-speed transfer of sensor data and intelligence information. Enhanced interoperability with other services, agencies, and allies will permit a level of integration of Sensitive Information (SI) operations not achievable with current systems.</p> <p>(U) Manage and resource / coordinate resourcing of experiments and pilot testing of Internet Protocol version 6 (IPv6) technologies to reduce acquisition and operational risk associated with the IPv6 Transition. Experiments identified are in direct support of and identified in the Navy Technical Transition Strategy for IPv6.</p>

RDT&E Articles Qty (MUOS Satellites)		1	1					
RDT&E Articles Qty (UFO TT&C Terminals)		2						
<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) The Mobile User Objective System (MUOS) program provides for the development of the next generation Department of Defense (DoD) advanced narrowband communications satellite constellation. The current Ultra-High Frequency (UHF) Follow-On (UFO) constellation is projected to degrade below acceptable availability parameters in 2008. The MUOS program is funded to the August 2004 Operational Requirements Document (ORD).</p> <p>(U) This MUOS Research Development Test &amp; Evaluation (RDT&amp;E) effort supports an Under Secretary Air Force (USecAF) approved Initial Operational Capability (IOC) in 2010 and Full Operational Capability (FOC) in 2014. A MUOS Risk Reduction &amp; Design Development (RRDD) contract was awarded in September 2004 to Lockheed Martin after Key Decision Point (KDP) B. The approval at KDP-B in September 2004 officially designated the MUOS Program as a Department of Defense Space Major Defense Acquisition Program. FY 2006-FY 2009 MUOS efforts are focused on Critical Design Review (CDR), beginning work on the spacecraft engineering development models, and fabrication, assembly, integration and test of the first two satellites. In addition, efforts will include the design, development, fielding and testing of the ground segment.</p> <p>(U) The funding for FY 2007 and FY 2008 also includes software development for Ultra-High Frequency (UHF) Follow-On (UFO) Telemetry, Tracking and Command (TT&amp;C) Terminal upgrades due to parts obsolescence, advanced planning, and engineering for the terminal installation, as well as the procurement and installation of two prototype terminals.</p> <p>(U) The 2008 President's Budget effect an OSD-directed net increase of \$126.11M in FY 2009. This increase was a result of direction from the MUOS Milestone Decision Authority (MDA) to fund the program to the OSD Cost and Analysis Improvement Group's (CAIG) estimate. This increase reflects the critical need for the MOUS system to remain on schedule as the preceding UFO system is rapidly degrading. These funds will be used for risk mitigation on the first two satellites. In addition, FY 2009 WPN - where the launch vehicle and remaining satellites are funded - reflects a corresponding OSD-directed net decrease of \$180M.</p>

PE 0301376N: MUOS Ground Station Construction, (MILCON Funding)		26.071	8.450							34.521

**(U) D. ACQUISITION STRATEGY:**

Concept Exploration contracts were awarded in early FY 2000 and completed in late FY 2001. Two Component Advancement Development (CAD) contracts were awarded in Q4 FY 2002. A Risk Reduction & Design Development (RRDD) contract was awarded in September 2004 for the first two satellites, system engineering and associated ground infrastructure. Research Development Test & Evaluation (RDT&E) funds will be used to procure the first two satellites. Weapons Procurement, Navy (WPN) funds will be used to procure the remaining four satellites and launch services for all six satellites. Military Construction (MILCON) funds are required to prepare MUOS ground sites located in Sicily (Niscemi location), Virginia (Northwest location) and Hawaii (Wahiawa location).

Updates to the ground Ultra-High Frequency (UHF) Follow-On (UFO) Telemetry, Tracking and Command (TT&C) terminals that support UFO on-orbit operations are included. RDT&E funds in the amount of \$10.5M in FY 2007 and \$2.5M in FY 2008 will be used for UFO TT&C software and firmware development and procurement and installation of two prototype terminals. WPN funds in the amount of \$10.7M in FY 2008 and \$2M in FY 2009 will be used to procure and install UFO TT&C terminal updates.

Notes:

- 1) Values are in millions of dollars.
- 2) The MUOS execution plan is dependent on termination liability funds being available for execution at the beginning of the following fiscal year. For example, termination liability funds for FY 2006 are obligated at the beginning of FY 2006, but are required for expenditure at the beginning of FY 2007 (in October and November of CY 2006), assuming no termination occurs.
- 3) Termination values were obtained from the Contract Funds Status Report (CFSR), a contractually required deliverable on the Risk Reduction & Design Development (RRDD) contract.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) The Navy Transformational Communications (TC) Terminal Satellite Communications program provides for the development and production of terminals to provide high capacity reliable, low probability of intercept (LPI), Anti-Jam (AJ), communications capability to the fleet. Terminals will support multiple data streams over Q-band, Ka-band, and X-band. The terminals will also support mesh networking without the need for gateway terminals. Development will focus on a Local Area Network (LAN) to Antenna capability, including quality of service required for Navy unique missions. Advanced Wideband System/Transformational Communications (AWS/TC) Program draft acquisition strategy consists of terminal suite development and environmental qualification, on-orbit testing, platform integration and test, software enhancements and regression testing throughout the life of the program.</p>

(U) **FY 2006:** Continued system level engineering process to determine optimal tradeoffs between cost and performance. Mitigated risks that have been identified. Products to support the acquisition include the terminal suite acquisition specification flowdown, the Acquisition Strategy Report (ASR), and the draft Capability Development Document (CDD). Hardware products include the development of a prototype advanced Transmissions Security (TRANSEC)/Communications Security (COMSEC) computer chip that will be required for the operation of every Navy Transformations Communications (TC) terminal.

(U) **FY 2007:**

(U) **FY 2008:** Continue system level engineering process to determine optimal tradeoffs between cost and performance. Mitigate risks that have been identified. Develop products to support the acquisition including the terminal suite acquisition specification flowdown, the ASR and all required Milestone B documentation, and the draft CDD, all supporting development and release of a Transformational Satellite (TSAT) Terminal Request for Proposal (RFP) in FY 2010. Hardware products include the development of a prototype advanced TRANSEC/COMSEC computer chip that will be required for the operation of every Navy TC terminal.

(U) **FY 2009:** Participate in Joint TSAT system and terminal development activities. Continue system level engineering process related to Navy TSAT Terminal development, as well a program risk mitigation efforts. Continue drafting the Navy TSAT Terminal CDD, as well as all required Milestone (MS) B documentation. In preparation for 2Q FY 2010 MS B and RFP release. Continue development of a prototype advanced TRANSEC/COMSEC computer chip required for the operation of every Navy TC terminal.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>(U) The goal of the Navy Information Systems Security Program (ISSP) is to ensure the continued protection of Navy and Joint telecommunications and information systems from hostile exploitation and attack. ISSP is the Navy's implementation of statutory and regulatory requirements specified in Presidential Decision Directive 63, the Computer Security Act of 1987 (Public Law 100-235), Appendix III of Office of Management and Budget (OMB) Circular A-130, and Department of Defense Directive 8500.1. ISSP activities address the triad of Defensive Information Operations defined in Joint Publication 3-13; protection, detection, and reaction. Evolving detection and reaction responsibilities extend far beyond the traditional ISSP role in protection or Information Security (INFOSEC). Focused on FORCEnet supporting the highly mobile forward-deployed subscriber, the US Navy's implementation of Network-Centric Warfare (NCW) places demands upon the ISSP, as the number of users dramatically increases and the criticality of their use escalates. Today, the ISSP protects an expanding core service critical to the effective performance of the Navy's mission, supported by Mission Assurance Category 1 systems.</p> <p>(U) The interconnectivity of Naval networks, connections to the public information infrastructure, and their use in modern Naval and Joint warfighting means that FORCEnet is a more easily attainable and extremely high value target. An adversary has a much broader selection of attack types from which to choose than in the past. In addition to the traditional attacks that involve the theft or eavesdropping of information, United States Navy (USN) information and telecommunications systems face advanced attacks involving malicious changes to critical information, changes to the functioning of critical systems, denial of service (jamming), and the destruction of systems and networks. Since many Naval information systems are based on commercially available technologies, an adversary often has access to the very technologies they want to exploit.</p> <p>(U) The rapid rate of change in the underlying commercial and government information infrastructures makes the provision of security an increasingly complex and dynamic problem. ISSP provides the Navy's war fighter the essential information trust characteristics of availability, confidentiality, integrity, authentication, privacy, and non-repudiation. Information Assurance (IA) technology mix and deployment strategies must evolve quickly to meet the rapidly evolving threats and vulnerabilities. No longer can information security divorce the information infrastructure.</p>								

CLASSIFICATION:

EXHIBIT R-2, RDT&E Budget Item Justification		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RESEARCH DEVELOPMENT TEST &amp; EVALUATION, NAVY BA-7</b>	R-1 ITEM NOMENCLATURE 0303140N Information Systems Security Program (ISSP)	
<p>(U) The Navy ISSP RDT&amp;E program works to provide the Navy with these essential Information Assurance (IA) elements: (1) Assured separation of information levels and user communities, including coalition partners; (2) Assurance of the telecommunications infrastructure; (3) Assurance of Joint user enclaves, using a defense-in-depth architecture; (4) Assurance of the computing base and information store; and, (5) Supporting assurance technologies, including a Public Key Infrastructure (PKI) and directories. The goal of all ISSP RDT&amp;E activities is to produce the best USN operational system that can meet the certification and accreditation requirements outlined in DoD Instruction 5200.40 (new DoDI 85xx series pending). Modeling DoD and commercial information and telecommunications systems evolution (rather than being one-time developments), the ISSP RDT&amp;E program must be predictive, adaptive, and technology coupled. The program develops frameworks, architectures, and products based on mission threats, information criticality, exploitation risks, risk management, and integrated Joint information system efforts.</p> <p>(U) All ISSP RDT&amp;E efforts comply with the National Technology Transfer and Advancement Act of 1995 (Public Law 104-113) as implemented through OMB Circular A-119 of February 10, 1998, DoD Instruction 4120.24, Defense Standardization Program (DSP), and DoD Instruction 4120.3-M, Defense Standardization Program Policies and Procedures. The predominant commercial standards bodies in ISSP-related matters include International Standards Organization (ISO), American National Standards Institute (ANSI), Institute of Electrical and Electronics Engineers (IEEE), Internet Engineering Task Force (IETF), World Wide Web Consortium (W3C), and National Institute of Standards and Technologies (NIST). The Joint interoperability required in today's telecommunications systems makes standards compliance a must and, the ISSP RDT&amp;E program complies with the Joint Technical Architecture. The FORCEnet architecture and standards documents reflect this emphasis on interoperable standards.</p> <p>(U) The interconnection of FORCEnet into the DoD Global Information Grid (GIG) requires all ISSP RDT&amp;E activities to adopt a minimum standard of "best commercial IA practice." The ISSP RDT&amp;E program examines commercial technologies to determine their fit within the USN architectures, provides feedback to vendors about what the Navy requires, and participates in the standards bodies themselves. When necessary to protect mission critical systems specified in Clinger/Cohen Act, the ISSP RDT&amp;E develops or tailors commercial and government technologies, standards, and processes to meet Navy-unique requirements; prototype: systems or portions of systems and examines their utility in operational Navy settings; and, provides IA expertise and engineering to Navy and Joint information system developments. All ISSP technology development efforts solve specific Navy and Joint IA problems using techniques that speed transition to procurement as soon as ready.</p> <p>(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing development for upgrade and integration of existing, operational systems. This includes cryptographic systems required to protect information defined in 40 USC Chapter 25 Sec 1452, and the ISSP cryptographic RDT&amp;E program is the implementation of requirements in Executive Orders 12333 and 12958 and National Security Decision Directive 145.</p>

<p>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The ISSP RDT&amp;E provides Information Assurance (IA) solutions for the USN forward deployed, highly mobile information subscriber. FORCENet relies upon an assured information infrastructure, and the ISSP RDT&amp;E program architects, engineers, and provides the Quality of Assurance (QoA) consistent with risks faced. The ISSP addresses engineering design, development, modeling, test, and evaluation for the unique IA challenges associated with the highly mobile, dispersed, bandwidth limited, and forward-tactical connected USN communications systems.</p> <p>(U) ISSP RDT&amp;E must work closely within the Navy's Information Operations – Exploit (Signals Intelligence - SIGINT) and Information Operations – Attack (INFOWAR - information warfare) communities. ISSP RDT&amp;E developed systems must dynamically change the Navy's current assurance vector, based upon operational indications and warnings. To ensure interoperability, ISSP RDT&amp;E must integrate fully with the FORCENet and Maritime Cryptologic Architectures. ISSP RDT&amp;E developed systems can provide the trigger for offensive warfare activities, such as those developed by the Navy Information Operations Command (NIOC).</p> <p>(U) This program element includes a rapidly evolving design and application engineering effort to modernize National Security-grade (Type-1) cryptographic equipment and ancillaries with state-of-the-art replacements in order to counter evolving and increasingly sophisticated threats. Communication Security (COMSEC) and Transmission Security (TRANSEC) evolution is from stand-alone dedicated devices to embedded modules incorporating National Security Agency (NSA) approved cryptographic engines, loaded with the certified algorithms and key, and interconnected via industry-defined interfaces. This includes the DoD Global Information Grid (GIG) Capabilities Requirements Document (CRD) for the development of Content Based Encryption (CBE) continuing in FY 06-11.</p> <p>(U) In addition to protecting National Security information, ISSP RDT&amp;E must provide enterprise-wide assurance for statutorily protected information under the Privacy Act of 1974, Computer Matching and Privacy Protection Act of 1988, Medical Records Confidentiality Act of 1995, Model State Public Health Privacy Act, 45 Code of Federal Regulation (CFR) subtitle A sub-chapter C, parts 160- 164, 1999, and the Federal Education Records Privacy Act. ISSP RDT&amp;E efforts must also provide assurance to the broad spectrum of Sensitive-but-Unclassified (SBU) information such as financial, personnel, contractor proprietary, and procurement sensitive.</p> <p>(U) The ISSP today includes much more than legacy Computer Security (COMSEC) and Network Security (NETSEC) technology. IA, or Defensive Information Operations, exists to counter a wide variety of threats in a Navy environment. ISSP activities cover all telecommunications systems, and RDT&amp;E projects must provide protection, detection, and reaction capabilities to the operational commander. ISSP RDT&amp;E provides dynamic risk managed IA solutions to the Navy Information Infrastructure, not just security devices placed within a network.</p> <p>(U) Few technology areas change as fast as telecommunications and computers, and IA must keep pace. This results in the continuing need to evaluate, develop, and/or test IA products and approaches. Technology-based efforts include developing or applying: (1) new secure voice prototypes; (2) technology for a new family of programmable Communication Security (COMSEC) and TRANSEC modules; (3) security appliances and software for switched and routed networks; (4) technology to interconnect networks of dissimilar classification, known as Cross Domain Solutions (CDS); (5) techniques for assuring code and data residing in and transiting the Navy's computing base and information store; and (6) PKI and associated access control technologies (such as SmartCards and similar security tokens).</p> <p>(U) The resulting expertise applies to a wide variety of Navy development programs that must integrate IA technology. Unlike traditional single-product development programs, the ISSP RDT&amp;E holds a unique Navy-enterprise responsibility outlined in SECNAVINST 5239.3 and OPNAVINST 5239.1B.</p>								

Exhibit R-2a, RD TEN Budget Item Justification

**CLASSIFICATION:**

EXHIBIT R-2a, RDT&E Project Justification		DATE: <b>February 2007</b>
APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N / BA-7</b>	PROGRAM ELEMENT NUMBER AND NAME 0303140N Information Systems Security Program (ISSP)	PROJECT NUMBER AND NAME 0734 Information Systems Security
<p>(U) The ISSP RDT&amp;E efforts must conclude with certified and accredited systems. This requires (1) assured separation of information levels and user communities, including coalition partners; (2) assurance of the telecommunications infrastructure; (3) assurance of Joint user enclaves; (4) assurance of the computing base and information store; and, (5) supporting assurance technologies, including PKI and directories. To ensure interoperability and commercial standards compliance, these efforts often encompass the research, selective evaluation, integration, and test of commercial-off-the-shelf/Non-Developmental Item (NDI) IA security products. For example, evaluation may include defensible network boundary capabilities such as firewalls, secure routers and switches, guards, Virtual Private Networks (VPN), and network Intrusion Prevention Systems (IPS).</p> <p>(U) The current operating environment has virtually eliminated the traditional distinction between telecommunications and information systems. Because Information Assurance (IA) is a cradle-to-grave enterprise-wide discipline, this program applies the technology and methodology to systems in development, production and operation, and develops the infrastructure needed to support and evaluate the security of deployed systems. The following describes several major ISSP technology areas:</p> <p>(U) Under the Navy Secure Voice (NSV) program, ISSP RDT&amp;E assesses technology to provide high grade, secure tactical and strategic voice connectivity.</p> <p>(U) Under the Navy Cryptographic Modernization Program, ISSP RDT&amp;E provides high assurance and other cryptographic technologies protecting information and telecommunication systems.</p> <p>(U) Under the Navy Security Management Infrastructure (SMI) program, ISSP RDT&amp;E develops, evaluates, and applies new emerging technology and enhanced capabilities to the Electronic Key Management System (EKMS) and other Navy Information Systems. Additional efforts will focus on the architecture, design, and development of systems to manage the security parameters (i.e., cryptographic keys) necessary to the operation of the systems developed by the Secure Data and Secure Voice portions of the ISSP. This includes the application of Public Key Infrastructure (PKI) and Certificate Management Infrastructure (CMI) technology, and the development of improved techniques for key and certificate management to support emerging, embedded cryptographic technology.</p> <p>(U) Under the Secure Data program, efforts focus on architectures, designing, acquiring, demonstrating and integrating the IA technologies into FORCEnet and the Navy Marine Corp Intranet (NMCI). This portion of the ISSP supports delivery of network security engineering expertise needed to support the NMCI, outside the continental United States (OCONUS) Navy Enterprise Network (ONE-NET), and the Integrated Shipboard Network Systems (ISNS), along with constituent systems such as Automated Digital Network System (ADNS), Global Command and Control System - Maritime (GCCS-M). It includes activities to:</p> <ul style="list-style-type: none"> <li>• Ensure that USN telecommunications and networks follow a consistent architecture and are protected against denial of service.</li> <li>• Ensure that all data within the USN Enterprise is protected in accordance with its classification and mission criticality, as required by law.</li> <li>• Provide the ability to protect from, react to, and restore operations after an intrusion or other catastrophic event.</li> <li>• Support the USN Computer Network Defense (CND) Service Provider Enabler by providing IA response to Information Operation Conditions (INFOCONs).</li> <li>• Defend against the unauthorized modification or disclosure of data sent outside enclave boundaries.</li> <li>• Provide a risk-managed means of selectively allowing essential information to flow across the enclave boundary.</li> <li>• Provide strong authentication of users sending or receiving information from outside their enclave.</li> <li>• Defend against the unauthorized use of a host or application, particularly operating systems.</li> <li>• Maintain configuration management of all hosts to track all patches and system configuration changes.</li> <li>• Ensure adequate defenses against subversive acts of trusted people and systems, both internal and external.</li> </ul>

	FY 06	FY 07	FY 08	FY 09
Computer Network Defense (CND)	4.956	5.567	9.089	9.213
RDT&E Articles Quantity				

**FY 06:** Continued to integrate security products and new technologies for resilient Computer Network Defense (CND) systems for both ship and shore installation. Provided Information Assurance (IA) engineering system design (+\$1.655M), evaluation, and testing techniques to maintain IA controls from system end-to-end and information source-to-sink. Integration of IA appliances, software, and implementation techniques for Intrusion Prevention, CND Virus Scanning of all network data exchange protocols, Vulnerability management, and initial Host Based Security requirement were assessed. Began development of a tiered management system (+\$2.0M) between Fleet Network Operations Centers (NOCs) and the Navy Cyber Defense Operation Center for real-time situation awareness and display of security risk as: Computer Network Threats, Vulnerabilities, and Critical System Security Performance. Began development of enhanced Security Management Tools (+\$1.301M) with new capabilities to support system configuration management and monitoring. Supported development of online engineering support to access subject matter security system experts; automate security system Information Assurance & Vulnerability Assessment (IAVA) distributions, web based information server, NOC site 'As Built' Configuration Data, and Emergency Restoration Files. Developed an IAVA verification assessment system to status Network Operation Center IAVA status for fielded security equipment.

**FY 07:** Plans include: Provide the broadest range of Information Assurance (IA) research and development support across Joint, Fleet, and ashore networks. Provide on-going security of new ships, aircraft, and submarines to ensure reduced manning and greater operational dependency on networks. Provide IA engineering design (+\$2.905M), evaluation, and testing technique to support a range of Sea Shield initiatives in Joint Command security solutions, Navy Sea Power tactical edge support to Global War on Terrorism, and Sea-Based cyber defense operations in coalition data sharing networks. Provide IA engineering to translate FORCEnet capabilities into CND solutions and conduct security design evaluations certification test results. Includes IA appliances, software, and implementation techniques for policies such as IAVA requirements, Information Operation Condition (INFOCON) response, and USN firewall policy. Provide continuous development of a Shipboard unit level tier situation information management system (+\$1.717M) as a means of hierarchically integrating Ship Security Monitors Network Operating Center security systems, and Navy Cyber Defense Operation Center for real-time display of security risk. Continue the development of using authenticated administrator access control techniques enhance fielded Security Management Tools (+\$0.945M) with new capabilities to support system configuration management and monitoring. Begin development of improved real-time computer network security, policy administration, and situation command control for Navy CND incremental program product acquisition with analytical tools to identify application or computer-network issues with operational compliance. Establish a management process to enforce common unit level fleet firewall policies across the Navy Network Enterprise using products/techniques to centrally manage and push security policies to controllable devices such as Firewalls, Intrusion Prevention Systems (IPS), and Filtering Routers at unit level ships and fleet Network Operation Centers. Evaluate combined system security effectiveness between each systems networking layer end-to-end, data link layer security through application exchange layer security.

**FY 08:** Integrate security situational awareness technologies (+\$7.316) for knowledge empowered Computer Network Defense (CND) operations for both ship and shore installation. Establish system management capabilities to enforce proactive unit level security policies across the Navy Network Enterprise to centrally manage security policies to controllable devices such as Firewalls, Intrusion Prevention Systems (IPS), and Filtering Routers at shore based Network Operation Centers. Includes IA appliances, software, and implementation techniques for automated response products such as vulnerability remediation, Information Operation Condition (INFOCON) response, and intrusion prevention policies.

Complete the development and integration of the patch management and host based security agents tools. Develop additional tools to determine accurate asset location and inventory information. Through the use of the data in the new tool, initiate the development of the process to assign asset criticality at the host and application level (+\$1.773M).

**FY 09:** Continue system integration efforts with analytical tools to identify asset criticality at the host and application level. Develop computer-network evaluation capabilities to perform real-time metrics of operational compliance with IA security controls, Mission Assurance Category, and data Confidentiality. Evolve system incremental capabilities to advance CND Protect, Monitor, Detect, Analyze, and Respond (+\$7.176M). Conduct Honey Net research to develop proactive Insider Threat Countermeasures and application layer Content Scanning. Develop User Defined Operational Pictures (UDOP) to enhance Security Information Manager (SIM) tools with active defense capabilities, improved incident correlation, and situation awareness reporting.

Complete the development of the process to assign asset criticality at the host and application level. Initiate the development of new capabilities to support the selective and automatic reactive settings of the network in accordance with INFOCON policies. Address the capabilities required to support the INFOCON management at both the Naval Cyber Defense Operation Center (NCDOC) and the Fleet NOC level (+\$2.037M).

<p><b>FY 06:</b> Provided for research, evaluation and prioritization of cryptographic products and KeyMat in modernizing the Naval Cryptographic inventory, including Type-1 US only, allied and coalition, and COTS. Provided support of development efforts in coordination with the Information Systems Security Office, Joint Services, and NSA. Provided (+\$1.641M) specific design, testing, and evaluation assistance for new USN platforms and assisted in defining embedded cryptographic product engineering requirements. Provided sustained IA engineering support for the development, acquisition, and installation of Crypto Modernization products including KG-3X, KG-40AR, Communication Security (COMSEC)/TRANSEC Integrated Circuit (CTIC)/Device Hybrid (CDH), Mode 5 Identify Friend or Foe (IFF), Link Encryption Family (LEF), Universal Crypto Device (UCD)/Expendable Crypto devices, and Next Generation COMSEC devices such as: Programmable Embedded Information Security product (PEIP) follow-on, Modern Legacy Crypto Solution (MLCS), KIV-7M/KIV-19M WALBURN and SAVILLE (+\$.808M), Thorton-KEESEEE (+\$2.130M) and KW-46, KG-45, KL-51, KG-68B (based on UCD development) sustainment/replacement. Additional efforts also focused on replacing NSA decertified products. Continued development of next generation network encryption devices, to include application and implementation of High Assurance Internet Protocol Encryptor (HAIPE) in transformational architectures such as FORCEnet and Joint Tactical Radio System (JTRS) Wideband Networking Waveform (WNW), and analysis of critical harmonization/development solutions between modernized In-line Network Encryptor (INE) devices and Key Management, Future Narrowband Digital Terminal (FNBDT) and Wireless standards to ensure net-centric capability.</p> <p><b>FY 07:</b> Continue to provide cryptographic products, including Type-1 US only, allied and coalition, and commercial-off-the-shelf. Provide consistent IA engineering support for the development of Crypto Modernization (+\$2.353M) products including KG-3X, KG-40AR, CTIC/CDH, IFF Mode 5, Link Encryption Family, Universal Crypto Device (UCD)/Expendable Crypto devices, and Next Generation COMSEC devices such as: PEIP follow-on, KIV-19, KIV 7M, KG-194 (Walburn) (+\$.594M), Thorton-KEESEEE-SAVILLE (+\$2.431M ) and KW-46, KG-45, KL-51, KGV-68B (based on UCD development). Continue acquisition documentation mandated by Joint Capabilities Integration and Development System (JCIDS) for development of identified cryptographic devices for replacement in FY06. Continue research, evaluation and prioritization of KEESEEE, SAVILLE and GOODSPEED cryptographic products and KeyMat in recommending replacement solution sets to provide cryptographic products, including type-1 US only, allied and coalition, and commercial-off-the-shelf devices to the war-fighter. Application and implementation of HAIPE in transformational architectures such as FORCEnet and Joint Tactical Radio System Wideband Networking Waveform (JTRS WNW), and develop integration solutions for modernized INE devices and Key Management, FNBDT and Wireless capabilities. Continue to research and develop potential uses of type-2 &amp; 3 for use in type-1 historical environments. Establish solutions for DoN unique Crypto's including: IOC for KL-51; Solution identified for KG-45; and Solution identified for KWR-46. Establish first Air Force/DoN LPO. Publish Crypto Product Roadmap and complete UCD requirements specifications and source selection for first UCD product. Establish Industry Working Group charter. Validate Information Assurance Cryptographic Product (IACP) Management Tool. Complete KEESEEE Integrated Product Team (IPT) (90% of Navy operational Crypto devices identified) and complete SAVILLE IPT (90% Crypto's identified).</p>				

**CLASSIFICATION:**

APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N / BA-7</b>	PROGRAM ELEMENT NUMBER AND NAME 0303140N Information Systems Security Program (ISSP)	PROJECT NUMBER AND NAME 0734 Information Systems Security
<p><b>FY 08:</b> Provide development support efforts in coordination with the Information Systems Security Office, Joint Services, and the National Security Agency. Continue development efforts and acquisition documentation for identified and selected KEESEE Cryptographic products as IPT completes at 100%. Complete SAVILLE IPT (90% Crypto's identified). Begin major pre-acquisition and development of specification for KGR-68. Provide consistent IA engineering support for on-going development of Crypto Modernization devices including UCD, KG-45, KL-51 and KG-68B. Continue development and testing of Cryptographic Module (Engine) in a joint effort with other services. A next generation cryptographic device for replacing identified legacy devices providing for secure communication capabilities to the war fighter. Begin additional pre-acquisition and development of on-going Decertified Cryptographic Algorithms affecting legacy DoN Cryptographic Devices.</p> <p><b>FY 09:</b> Continue to provide cryptographic products, including Type-1 US only, allied and coalition, and commercial-off-the-shelf to DoN. Continue research, evaluation, and prioritization of several other Decertified Cryptographic products. Provide consistent IA engineering support for the development and integration of Crypto Modernization products and begin major pre-acquisition and development specification for KGV-68. Complete development and testing of first UCD module in a joint effort with other services. Begin installation of identified first device groupings. Continue development and testing of on-going Decertified Cryptographic Algorithms affecting legacy DoN Cryptographic Devices and Communication Security (COMSEC). Continue pre-acquisition and development of on-going Decertified Cryptographic Algorithms affecting legacy DoN Cryptographic Devices.</p>

**FY 06:** Continued development and integration efforts of Secure Communication Interoperability Protocol (SCIP), formally Future Narrowband Digital Terminal (FNBDT), standard compression to provide the Sea-Shore and Sea-Shore-Sea Secure Voice communications. Developed survey for collecting secure voice mission and operational requirements from users for a new COMSEC device that will replace various legacy voice devices. Developed and fielded the Tactical Shore Gateway (TSG) to provide interoperability between tactical secure voice equipment (i.e., KY-57 KY58, KY-68, KY99A, KY-100 and ANDVT) and Secure Telephone Equipment (STE)/FNBDT devices as well as secure conference capabilities. The first TSG system was installed at Naval Computer and Telecommunications Area Master Station (NCTAMS) LANT. Developed the first draft version of Naval Advanced Secure Voice Architecture (NASVA) to establish a baseline for synchronized secure voice evolution in net-centric environment.

**FY 07:** Complete development and integration test of submarine SCIP Inter-working Function (IWF)/gateway to provide off-ship secure communication capabilities while underway. Begin development and test a SCIP IWF to provide off-ship secure voice communications to underway Military Sealift Command ships and Coast Guards ships. Update the Naval Advanced Secure Voice Architecture (NASVA) to provide a transition to bridge from channel-centric to net-centric Secure Voice capability, guide the next generation of Secure Voice and facilitate decision making on systems to be refreshed, retired and/or replaced. Continue development of the variable data rate voice algorithm (a component of Secure Voice Core Technology) and its baseline interface software. Initiate generation of baseline functionality (derived from operational and mission requirements and new technologies) and design of a functional model for development of next generation secure voice products - Universal Voice Terminal (UVT) and Personal Secure Telephone (PST). Research and develop a compression technique (SCIP IWF or gateway) to allow SCIP IWF signaling be transmitted off-ship for underway submarines.

**FY 08:** Complete development and integration test of submarine SCIP IWF/gateway to provide off-ship secure communication capabilities while underway. Begin development and test a SCIP IWF to provide off-ship secure voice communications to underway Military Sealift Command (MSC) ships and Coast Guards ships. Complete development of the Variable Data Rate Voice Encoder and its baseline interface software. Initiate generation of baseline functionality (derived from operational and mission requirements and new technologies) and design of a functional model for development of next generation secure voice products (UVT and PST).

**FY 09:** Complete development and integration test of the SCIP IWF for MSC and Coast Guard ships. Continue the design and development of next generation Secure Voice capabilities/products.

**FY 06:** Provided systems security engineering for the development, testing, and evaluation of complex multi-level security solutions, including complicated evaluations involving allied and coalition participation. Analyzed, evaluated and examined cross domain applications and technologies including databases, web browsers, routers/switches, etc. Developed and integrated Cross Domain Solutions (CDS) prototype architecture at Network Operation Center (NOC) facilities. Continued development and integration of Block One CDS solutions to focus on providing a robust coalition interoperability using Multi-Level Thin Client (MLTC), secure guarding devices and afloat coalition network systems. Began coordination with the Cross Domain Management Office (CDMO) including development of the Navy's Cross Domain Solution Office.

**FY 07:** Continue to provide systems security engineering development, testing, and evaluation for multi-level security solutions, including complicated evaluations involving allied and coalition participation. Examine and evaluate multi-level aware applications and technologies including databases, web browsers, routers/switches, etc. Develop and integrate Multiple Security Levels (MSL)/CDS prototype architecture at NOC facilities.

Key Management Infrastructure	3.820	4.713	5.690	5.235
RDT&E Articles Quantity				

**FY 06:** Began prototyping and certification/accreditation of the Navy's Key management system. Began Common User Application Software (CUAS), Data Mgmt Device (DMD), Simple Key Loader (SKL) and Electronic Key Management System (EKMS) Phase V development and integration. Completed Mode 5 Identify Friend or Foe (IFF) (Time of Day) design and development. Provided engineering design evolution for the supporting key management infrastructure, EKMS Phase IV for Tier 0,1,2,3. Performed design, evaluation, integration, and test of key-related platforms, such as smart cards, authentication mechanisms and biometric devices. Provided systems security engineering, test, evaluation, and development program support for organizations utilizing cryptographic equipments and associated keying systems (+\$2.278). Began security and functionality testing and evaluation of current Public Key Infrastructure (PKI) tokens and readers due to upgrades to middleware. Began research of solutions and tools to implement Cryptographic network logon specifically for Navy Enterprise Network (ONE-NET) and legacy networks in Continental United States (CONUS). Initiated testing of Navy Certificate Validation Infrastructure (NCVI) afloat to include testing of Integrated Shipboard Network Systems (ISNS) Common PC Operating System Environment (COMPOSE) with PKI components. Provided front-end analysis for role-based system administrator certificates on alternate token. Performed design, evaluation, integration, and test of key-related platforms, such as smart cards, authentication mechanisms and new contact-less interface smart cards (+\$1.542).

**FY 07:** Continue security and functionality testing and evaluation of current PKI tokens and readers to upgrade middleware, including Homeland Security Presidential Directive (HSPD-12) implementation. Continue to streamline the method for developing effective secure symmetric and asymmetric cryptographic key and generation, distribution, management, and usage products and services by identifying and prioritizing fleet requirements. Complete Defense Message System (DMS) migration to PKI. Continue research and development of solutions to resolve technical challenges and the tools required for deployment of Navy non-Navy/Marine Corps Intranet (NMCI) cryptographic network logon (CLO), CLO for non-Windows operating systems, and NCVI/Online Certificate Status Protocol (OCSP) both Ashore and Afloat. Research and evaluation of Microsoft VISTA integration, PKI with Internet Protocol Version 6 (IPv6), and Device (non-human) Certificates. Begin security and functionality testing and evaluation of OCSP architecture for the SIPRNet (+\$1.485).

Continue EKMS Phase V to include development and implementation of an extended, networked architecture (key distribution over Secret Internet Protocol Router Network (SIPRNET)) to improve distribution and reliability for deployed forces, modernized key processors, common user application software and data transfer devices. Continue to develop and integrate Online Certificate Status Protocol and Future fill devices. Begin Wireless Key Fill technology design and development. Complete the Key Loading and Initialization Facility design and development. Continue design and development of the Key Management Infrastructure (KMI) client workstation. Complete certification/accreditation of the Navy's Key Management System (NKMS). Conduct requirements definition for the IA Component (IAC) Encryption device. Continue KMI CI-3 Requirements development including Benign Fill and single point keying, and general development of CI-3 capabilities. Support and ensure coordinated developments for KMI/EKMS in the transition from IPv4 to IPv6 (+\$3.228).

CLASSIFICATION:

Continue EKMS Phase V to include development and implementation of an extended, networked architecture (key distribution over SIPRNET) to improve distribution and reliability for deployed forces, modernized key processors, common user application software and data transfer devices. Complete Wireless Key Fill technology design and development. Continue to develop Key Management Infrastructure (KMI) Capability Increment 2 (CI-2) client and Advanced Key Processor (AKP), including testing and Hub Management Interface (HMI) development. Continue KMI CI-3 capability development and design including Benign Fill and single point keying. Support and ensure coordinated developments for KMI/EKMS in the transition from Internet Protocol Version 4 (IPv4) to IPv6 (+\$4.191M). Complete security and functionality testing and evaluation of PKI tokens, readers and middleware for the SIPRNET. Continue security and functionality testing and evaluation of PKI tokens and readers to upgrades to middleware, in support of the HSPD-12 biometrics based smart cards. Continue research and development of solutions to resolve technical challenges and the tools required for deployment of Navy non-NMCI CLO, CLO for non-Windows operating systems, and NCVI/OCSP Afloat. Research and develop tools to support Microsoft VISTA implementation, PKI with IPv6, Device (non-human) Certificates, and signature applications/XML document signing. Complete development and integration of NCVI/OCSP ashore. Complete DMS migration to PKI. Support the development and testing of Tactical PKI (as part of DoD KMI) and its supporting architecture (+\$1.499M)</p> <p><b>FY 09:</b> Continue KMI CI-2 client and Advanced KP security testing and certification and accreditation. Continue KMI CI-3 development support for Advanced Extremely High Frequency (AEHF), Transformational Satellite (TSAT), and Global Information Grid (GIG) requirements for Navy (+\$3.646M). Research and integrate PKI device certificates for mobile devices using 802.1x interfaces. Continue security and functionality testing and evaluation of PKI tokens and readers to support Tactical PKI and HSPD-12 implementation. Research and development of solutions to resolve technical challenges and the tools required for the deployment of MS Exchange 12, full implementation of IPv6, and additional Device (non-human) certificates. Complete development and integration of NCVI ashore, afloat NCVI, and shipboard CLO. Continue to research and develop solutions and tools for signature applications/XML document signing and Public Key Enabled (PKE) (+\$1.589M).</p>

**FY 06:** Continued to provide security systems engineering (+\$1.087M) support for the developed of DoD and DoN Information Assurance architectures and the transition of new technologies to address Navy Information Assurance challenges. Supported the ongoing security design and integration of IA Components into programs such as FORCEnet, Computer Network Defense in Depth (CND-ID) Strategy, Transformational Communication (TC), Global Information Grid Enterprise Services (GIG-ES), and Secure Voice over Internet Protocol (SVoIP). Provided risk analysis and recommended risk mitigation strategies (+\$1.050M) for Navy critical networks and C4I systems. Coordinated with the Navy acquisition community to ensure IA requirements are identified and addressed within the development cycles for emerging Navy network and C4I capabilities. Continued development of open source authentication and authorization solution (+\$.450M) by incrementally adding new features/enhancements for federated identity, Public Key Infrastructure (PKI), Role Based Access Control (RBAC), and Common Access Card (CAC). Provided standardized security design and installation baselines to ensure enhancements of configuration management. Developed Next Generation Access Systems solutions (+\$0.164M) to provide improved security for access to computers, networks, and sensitive spaces or buildings. Seamless integration with CAC is necessary.

**FY 07:** Provide security systems engineering (+\$1.523M) support for the developed of DoD and DoN Information Assurance architectures and the transition of new technologies to address Navy Information Assurance challenges. Support the ongoing security design and integration of IA Components into programs such as FORCEnet, Computer Network Defense in Depth (CND-ID) Strategy, Transformational Communication (TC), Global Information Grid Enterprise Services (GIG-ES), and Secure Voice over Internet Protocol (SVoIP). Provide risk analysis and recommended risk mitigation strategies (+\$1.180M) for Navy critical networks and C4I systems. Coordinate with the Navy acquisition community to ensure IA requirements are identified and addressed within the development cycles for emerging Navy network and C4I capabilities. Initiate the development and integration (+\$.650M) of IA capabilities for integration into the Service Orientated Architecture being developed for deployment on Navy afloat networks. Provide IA engineering for development of Wireless Networks and Personal Digital Assistant (PDA) security (+\$0.259M) readiness of Naval wireless networks and mobile computing devices, continue to evaluate products for security issues and develop guidance and procedures.

APPROPRIATION/BUDGET ACTIVITY <b>RDT&amp;E, N / BA-7</b>		PROGRAM ELEMENT NUMBER AND NAME 0303140N Information Systems Security Program (ISSP)			PROJECT NUMBER AND NAME 0734 Information Systems Security				
<b>(U) C. OTHER PROGRAM FUNDING SUMMARY:</b>									
<u>Line Item No. &amp; Name</u>	<u>FY 2006</u>	<u>FY 2007</u>	<u>FY 2008</u>	<u>FY 2009</u>	<u>FY 2010</u>	<u>FY 2011</u>	<u>FY 2012</u>	<u>FY 2013</u>	
OPN 3415 Info Sys Security Program (ISSP)	97.159	101.340	107.609	120.212	143.237	141.356	146.128	155.913	
<b>(U) D. ACQUISITION STRATEGY:</b>									
<p><b>EKMS Phase V</b> - The Navy's ISSP Electronic Key Management System (EKMS) program is linked to the National Security Agency's (NSA) strategy in implementing EKMS in evolutionary phases and migrating to Key Management Infrastructure (KMI). NSA is the lead for the joint EKMS effort and has been developing and certifying EKMS devices and capabilities in an evolutionary approach. EKMS Phase V is a major component evolving to KMI Capability Increment 2 (CI-2). KMI is a Major Automated Information System (MAIS) program assigned to NSA. Therefore, it is crucial that the Research and Development efforts of EKMS coincide with those of KMI. Navy's EKMS requires Research, Development, Test and Evaluation (RDT&amp;E) funding over the Future Years Defense Program (FYDP) to ensure the Navy infrastructure evolves with the EKMS phases, supports additional devices certified by NSA and supports the migration of EKMS to KMI CI-2. This will require the modification of the Navy EKMS Net Key Server. PEO C4I &amp; Space/PMW 160 is collaborating with Naval Research Lab (NRL) to integrate commercial-off-the-shelf (COTS)/government-off-the-shelf (GOTS) devices into the Navy architecture to be compatible with Phase 5 and KMI architectures. These efforts require close work with NSA and the other services to ensure no impact on current operations and minimum impact on EKMS Phase 5 as it evolves to KMI CI-2. PMW 160 procures NSA certified COTS/GOTS devices to support Navy requirements. The EKMS Phase V program will utilize existing competitively awarded NSA and SSC contracts for development and implementation of type 1 certified COTS/GOTS devices for initial production phases, with plans to initiate innovative contracting methods and types consistent with current Assistant Secretary of the Navy Research, Development &amp; Acquisition (ASN/RDA) policies to reduced cost and streamline the integration, installation, logistics and training efforts.</p> <p><b>Crypto Modernization (KW-46 Replacement)</b> -The KW-46 is a device that performs on-line decryption of digital messages, record, and data traffic over the broadcast system at data rates from 50 to 9,600 bits per second (BPS) that processes information up to and including TOP SECRET. The KWR-46 is used primarily on ships and submarines while the KWT-46 is located exclusively on shore sites, consisting of the KWT-46 transmitter and the KWR-46 receiver, which are no longer in production. The PMW 160 is also evaluating acquisition development replacements of the KG-45, KL-51, KG-68B cryptographic devices per the Universal Crypto Device (UCD) effort. Navy is currently refining the requirement specs, preparing formal Analysis of Alternatives (AoA), Request For Information (RFI's), and Life Cycle Cost Estimates (LCCE's) to be completed in FY07 and the plan is to competitively award the development contract by 1Q FY08.</p> <p><b>Crypto Modernization (Universal Crypto Device)</b> - Navy is currently refining the requirement specs, preparing formal AoA, RFI's, and LCCE's to be completed in FY 06 and the plan is to competitively award the development contract by 1Q FY08. The evaluation of requirements of Crypto Modernization (Thornton-KEESE) cryptographic system will also necessitate preparation of formal AOA, RFI within FY06 &amp; FY07.</p>

<p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p>The goal of the Navy Information Systems Security Program (ISSP) is to ensure the continued protection of Navy and Joint information and information systems from hostile exploitation and attack. ISSP activities address the triad of Defense Information Operations: protection, detection, and reaction. Evolving attack sensing (detection), warning, and response (reaction) responsibilities extend far beyond the traditional ISSP role in protection or Information Systems Security (INFOSEC). Focused on the highly mobile forward-deployed subscriber, the US Navy's adoption of Network-Centric Warfare (NCW) places demands upon the ISSP, as the number of users explodes and the criticality of their use escalates. Today, the ISSP protects an expanding core of services critical to the effective performance of the Navy's mission.</p> <p>The rapid rate of change in the underlying commercial and government information infrastructures makes the provision of security an increasingly complex and dynamic problem. Information Assurance (IA) technology mix and deployment strategies must evolve quickly to meet rapidly evolving threats and vulnerabilities. No longer can information security divorce the information infrastructure. The ISSP enables the Navy's war fighter to trust in the availability, integrity, authentication, privacy, and non-repudiation of information.</p> <p>This project includes funds for advanced technology development, test and evaluation of naval information systems security based on leading edge technologies that will improve information assurance (e.g., situational awareness and information infrastructure protection) across all Command echelons to tactical units afloat and war fighters ashore. This effort will provide the research to develop a secure seamless interoperable, common operational environment of networked information systems in the battlespace and for monitoring and protecting the information infrastructure from malicious activities. This effort will provide Naval Forces a secure capability and basis in its achievement of protection from unauthorized access and misuse, and optimized IA resource allocations in the information battlespace. This program will also develop core technology to improve network infrastructure resistance and resiliency to attacks; enable the rapid development and certification of security-aware applications and information technologies in accordance with the Common Criteria for IA and IA-Enabled information technology products by the National Security Telecommunications and Information Systems Security Instructions; and measure the effectiveness and efficiency of IA defensive capabilities under Naval environments.</p> <p>The program will develop common architectural frameworks that facilitate integration of network security capabilities, enable effective seamless interoperability, and contribute to a common consistent picture of the networked environment with respect to information assurance and security. This effort will address the need for a common operational picture for Information Assurance (IA), as well as assessment of security technology critical to the success of the mission. Initiate requirements definition for situation awareness capabilities to support computer network defense in highly distributed, homogeneous, and heterogeneous networks including mobile and embedded networked devices. This effort also includes the architectural definition of situational awareness and visualization capabilities to support active computer network defense and support underlying data mining and correlation tools. This includes addressing the capability to remotely manage and securely control the configurations of network security components to implement changes in real time or near real time. Initiate requirements definition for secure coalition data exchange and interoperability among security levels and classifications. Ensure approaches address various security level technologies as well as emerging architectural methods of providing interoperability across different security levels. Examine multi-level aware applications and technologies including databases, web browsers, routers/switches, etc. Initiate infrastructure protection efforts as the Navy develops network centric architectures and warfare concepts, ensuring an evolutionary development of security architectures and products for IA that addresses Navy infrastructure requirements. Ensure the architectures evolve to provide proper protection as technology, DoD missions, and the threat all evolve. Include defensive protections as well as intrusion monitoring (sensors), warning mechanisms, and response capabilities in the architecture. Ensure the unique security and performance requirements of tactical systems, including those operating various security levels are addressed. Initiate the efforts to conceptualize new network centric warfare technology to protect our assets, such as secure network gateways and routers, and components and tools that improve the survivability of Navy networks. Provide systems security engineering, certification and accreditation support for high-confidence naval information system and ensure certification and accreditation approaches are consistent with Navy and DoD requirements.</p> <p>A Memorandum of Agreement (MOA) was signed in FY01 between the Office of Naval Research Department of Information, Electronics &amp; Surveillance (ONR31) and Office of the Chief of Naval Operations, Directorate of Space, Information Warfare, Command and Control, Information Warfare Division (N64), and provides for interagency coordination with ONR, N71 and PEO C4I and Space (PMW 160) in pursuance of this effort.</p> <p>This Project under Program Element 0303140N is a restructuring with the transfer of responsibility from SPAWAR to ONR in FY 2003 for prototyping IA concepts.</p> <p>JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing development for upgrade of existing, operational systems.</p>

	FY 2006	FY 2007	FY 2008	FY 2009
Software and Systems Research	2.075	1.991	2.144	2.161
RDT&E Articles Quantity				

**FY06:** Completed the prototype development of the security management common picture of the networked environment with respect to information assurance and security. Completed the addition of security enhancements to cross-domain solutions (CDS), such as stenography scrubbing and user/workstation authentication. Enhanced the multi-level chat capability. Continued to develop new infrastructure protection technologies in support of network centric architectures and warfare concepts. Continued to conceptualize new network centric warfare technology to protect our assets, such as secure network gateways and routers, components, and tools that improve the survivability of Navy networks. Initiated the definition of new network technology critical to the protection of mission assets. Continued systems security engineering, certification, and accreditation support for high-confidence naval information systems.

**FY07:** Initiate efforts on enhancing commercial wireless technology to meet high assurance requirements, critical for the global information grid (GIG). Initiate the development of an information sharing architecture to address data integrity, confidentiality and policy management throughout networks of varying classification levels. Examine multi-level aware applications and technologies including databases, web browsers, routers/switches, etc. Complete the development of the common operational assessment tool of the networked environment with respect to information assurance and security. This addresses the need for a common operational picture for Information Assurance (IA), as well as assessment of security technology critical to the success of the mission. Continue development and refinement of infrastructure protection and architectures for Navy network centric architectures and warfare concepts. Continue systems security engineering, certification and accreditation support for high-confidence naval information systems and ensure certification and accreditation approaches are consistent with Navy and DoD requirements.

**FY08:** Continue working with commercial wireless technology to meet high assurance requirements, with particular emphasis on Navy and Marine Corps network centric environments. Initiate the development of wireless technology to augment the security posture of the commercial wireless technology. Continue the development of an information sharing architecture that addresses data integrity, confidentiality and policy management throughout networks of varying classification levels. Within the architecture/infrastructure, enhance the framework to provide on demand security services that support confidentiality, integrity and authentication across security domains, as well as enforces the mission security policy. Continue development and refinement of infrastructure protection and architectures for Navy network centric architectures and warfare concepts. Ensure the architectures evolve to provide proper protection as technology, DoD missions, and the threat all evolve. Include improved defensive protections and response capabilities in the architecture, as well as provide support for traditional intrusion monitoring (sensors) and warning mechanisms. Develop technology and/or tools to ensure the unique security and performance requirements of tactical systems, including those operating at various security levels are addressed. Continue systems security engineering, certification and accreditation support for high-confidence naval information system and ensure certification and accreditation approaches are consistent with Navy and DoD requirements.

**FY09:** Complete the development of the wireless technology to meet high assurance requirements. Place the technology in selected Navy and Marine Corps sites for assessment. Use the feedback to improve the capabilities of the technology to better meet the mission requirements. Continue the development of an information sharing architecture that addresses data integrity, confidentiality and policy management throughout networks of varying classification levels. Evaluate the security services of the framework that support confidentiality, integrity and authentication across security domains, as well as enforces the mission security policy. Use the assessment and operational feedback to improve the framework and security services. Enhance the framework to address survivability and hardening. Develop technology that protects the framework from attacks, assesses the attack, and responds appropriately to enable the framework to reconstitute and provide the requisite capabilities/services. Ensure the architecture/framework evolves to provide proper protection as technology, DoD missions, and the threat all evolve. Initiate development of modernized attack sensing and warning mechanisms based on new algorithms and data mining concepts, and response capabilities for the architecture/framework. Continue the development of technology and tools to ensure the unique security and performance requirements of tactical systems, including those operating at various security levels are addressed. Begin assessing the tools and technology in representative operational environments. Use the feedback to improve the tools and technology. Continue systems security engineering, certification and accreditation support for high-confidence naval information system and ensure certification and accreditation approaches are consistent with Navy and DoD requirements.

<p><b>FY06:</b> SECUREKit: Further refined design of authorization software to include integration with authentication service, Navy Enterprise Single Sign-On (NESSO) and Trusted Services Engine (TSE). Integrated the product within test networks and worked with the user community for feedback using a well defined authorization language approach. The final design, still a work in progress, is based on open architecture and designed for enabling web-based enterprise services in the Department of the Navy and coalition participants. The software components provide authorization services for the Global Information Grid (GIG) and for the FORCEnet enterprise.</p> <p><b>FY07:</b> SECUREKit: Continue further refinement of the administration interface to the underlying authorization engine. Begin to integrate the SECUREKit trusted authorization processing engine with the discovery application. Begin Certification and Accreditation (C&amp;A) documentation required to achieve a type accreditation. Begin Authority to Operate (ATO) on Secret Internet Protocol Router Network (SIPRNET) and Non-Classified Internet Protocol Router Network (NIPRNET).</p> <p>Tactical Key Loader: Begin system engineering activities to include requirements analysis, investigation of new technologies, development of prototype and Engineering Development Models, as well as test and evaluation of these units in the lab and operational environments. Integrated logistic support and supportability of the device once fielded will also be ascertained. Initiate development, and investigation of National Security Agency assessment certification requirements. Software and hardware will need to be develop and tested to assure it meets the needs of the Special Forces/USMC warfighter. Tradeoffs must be made to address security concerns of the NSA and still meet the special needs of the warfighter. This device must also be developed so that it will transition to the modern keying environment brought by KMI.</p>

	FY 06	FY 07	FY 08	FY 09
9903 Universal Description, Discovery, and Integration		1.793		
RDT&E Articles Quantity				

**FY07:** Universal Description, Discovery, and Integration: Begin systems development that will allow users to discover and access valuable information at the right time based on the user's access clearance and need to know. A trusted discovery service will ensure that information accessed is at the appropriate level, provide the requisite information and prevent extraneous or unauthorized inputs and access. Over-riding the rule set with the trusted discovery service will be configurable based on the users role and the rules of engagement. The web architecture-based solution will allow the user to access this information at the Navy enterprise level and eliminates the need to reconfigure networks and hardware when accessing one domain or another.

In order to implement a fully enabled end-to-end network enterprise environment envisioned by the FORCEnet vision document, begin the development of a component-based architecture called Secure Universal Description, Discovery, and Integration (UDDI). Secure UDDI will provide the necessary components to meet the Naval warfighter requirements.

- (1) Secure and non-reputable repository of services and information base on current open standards such as UDDI V3.
- (2) Incorporation of NSA certified SECUREKit components for authentication and authorization.
- (3) Secure discovery of services and information.

The evolutionary component architecture of the Secure UDDI architecture is being accomplished through partnering efforts with the National Security Agency (NSA) and PEO(C4I).

**Joint Command and Control (JC2)** capability is the DoD's principal command and control capability that will be accessible in a net-centric environment and focused on providing the commander with the data and information needed to make timely, effective and informed decisions. JC2 will be a "born" Joint, developed, integrated, tested and used by all Services to improve interoperability, collaborative planning and rapid decision making across all Joint warfighting functions at the Secretary of Defense, Chairman of the Joint Chiefs (CJCS), Combatant Command (COCOM), Joint Task Force (JTF) and Component levels.

JC2 will encompass the inherent capabilities of the Global Command and Control System (GCCS) Family of Systems (FoS) plus additional capabilities not met by GCCS FoS and delineated in the Analysis of Alternatives. As directed, there will be one version of JC2 implemented, integrated and utilized by all Services and Agencies (GCCS-A, GCCS-M, GCCS-AF and GCCS-J capabilities will transition to JC2).

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Net-Enabled Command Capability (NECC) is the DoD's principal command and control capability that will be accessible in a net-centric environment and focused on providing the commander with the data and information needed to make timely, effective and informed decisions. NECC draws from the command and control (C2) community to evolve current and provide new C2 capabilities into a fully integrated, interoperable, collaborative Joint solution. Warfighters can rapidly adapt to changing mission needs by defining and tailoring their information environment and drawing on capabilities that enable the efficient, timely and effective command of forces and control of engagements.

DoD has placed its emphasis upon NECC as the future of C2 for the warfighter. The Department can not accomplish its mission to provide an integrated, flexible, and adaptable full spectrum DoD C2 capability by continuing to rely on independently built and deployed systems that result in situational awareness and force identification variations, data incompatibilities, and non-interoperable services and applications supporting time-critical decisions. Consequently, the Deputy Secretary of Defense has directed that DoD funding be internally realigned into the NECC Program. These funding realignments provide a single, integrated, coherent enhancement of the Department's capability for operational level Joint command and control (JC2) by addressing some of the shortfalls within NECC. FY 2008 will be primarily focused on NECC technology piloting activities in order to speed up the development, integration, testing, and evaluation of new C2 capabilities; while in FY 2009, the focus will be on the development of Situational Awareness and Deployment Planning C2 capabilities.

The migration of existing C2 capabilities towards the standards being developed and adopted as well as the integration of capability modules that are destined for piloting activities into the Maritime Operating Environment is a critical effort that the Navy Component Program Management Office performs.

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Net-Enabled Command Capability (NECC) is the DoD's principal command and control capability that will be accessible in a net-centric environment and focused on providing the commander with the data and information needed to make timely, effective and informed decisions. NECC draws from the command and control (C2) community to evolve current and provide new C2 capabilities into a fully integrated, interoperable, collaborative Joint solution. Warfighters can rapidly adapt to changing mission needs by defining and tailoring their information environment and drawing on capabilities that enable the efficient, timely and effective command of forces and control of engagements.

DoD has placed its emphasis upon NECC as the future of C2 for the warfighter. The Department cannot accomplish its mission to provide an integrated, flexible, and adaptable full spectrum DoD C2 capability by continuing to rely on independently built and deployed systems that result in situational awareness and force identification variations, data incompatibilities, and non-interoperable services and applications supporting time-critical decisions. Consequently, the Deputy Secretary of Defense has directed that DoD funding be internally realigned into the NECC Program. These funding realignments provide a single, integrated, coherent enhancement of the Department's capability for operational level Joint command and control (JC2) by addressing some of the shortfalls within NECC. FY 2008 will be primarily focused on NECC technology piloting activities in order to speed up the development, integration, testing, and evaluation of new C2 capabilities; while in FY 2009, the focus will be on the development of Situational Awareness and Deployment Planning C2 capabilities.

The migration of existing C2 capabilities towards the standards being developed and adopted as well as the integration of capability modules that are destined for piloting activities into the Maritime Operating Environment is a critical effort that the Navy Component Program Management Office performs.

FY 06: Successful migration of selected maritime command and control capabilities to commercial standards and architectures envisioned to be used by the Net-Enabled Command Capability (NECC) Program. Successful completion of Milestone A. Navy Component Program Management Office's (CPMO) participated in Technology Development (TD) Phase activities and acquisition documentation development.

FY 07: Planned migration of additional maritime command and control (e.g., GCCS-M) capabilities to standards-based architectures. Begin development of the plans for transfer of Global Command and Control System - Maritime (GCCS-M) management and functionality to NECC. Continued participation in NECC TD phase activities and development of acquisition documentation required for Milestone B.

FY 08/09: Continue migration of additional maritime command and control (e.g., GCCS-M) capabilities to standards-based architectures. Participate in NECC Inc I System Development and Demonstration (SDD) Phase activities.

**(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

## A. (U) Mission Description

Cobra Judy Replacement is a program that has been transferred from the Air Force to the Navy, per an Office of the Secretary of Defense (OSD) Milestone A Acquisition Decision Memorandum dated 6 August 2002.

Cobra Judy funds will replace the current U.S. Naval Ship (USNS) Observation Island which has become unsustainable and due to leave service no later than 2012. This program will fund the development of a single ship-based radar suite for world wide technical data collection against ballistic missiles in flight. Prior funding provided instrumentation of quality radar data and imaging, detailing threat assessment of ballistic missile development, testing and range augmentation and monitored or verified specific aspects of United States treaties with other countries. To avoid vulnerabilities in our national security it is imperative we replace the current capability of Cobra Judy in a timely manner to prevent any potential gap in coverage. Prior studies have indicated that a ship-based radar replacement is the most timely and cost effective solution.

**B. (U) PROGRAM CHANGE SUMMARY:**

 <b>D. ACQUISITION STRATEGY:</b>										
The acquisition strategy calls for leveraging ongoing Navy Ballistic Missile Defense (BMD) radar development, updating existing user interface/communications/data handling equipment designs from a similar operational unit, and purchasing and integrating the mission equipment aboard an appropriate merchant-class hull. System design will be accomplished using in-hand technologies and commercial standards to lower schedule risk and produce a product with the lowest possible life-cycle cost.

**(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

A. (U) Mission Description

Cobra Judy Replacement is a program that has been transferred from the Air Force to the Navy, per an Office of the Secretary of Defense (OSD) Milestone A Acquisition Decision Memorandum dated 6 August 2002. Funding depicted herein represents approximately half of the total budget.

Cobra Judy funds will replace the current U.S. Naval Ship (USNS) Observation Island which has become unsustainable and due to leave service no later than 2012. This program will fund the development of a single ship-based radar suite for world wide technical data collection against ballistic missiles in flight. Prior funding provided instrumentation of quality radar data and imaging, detailing threat assessment of ballistic missile development, testing and range augmentation and monitored or verified specific aspects of United States treaties with other countries. To avoid vulnerabilities in our national security it is imperative we replace the current capability of Cobra Judy in a timely manner to prevent any potential gap in coverage. Prior studies have indicated that a ship-based radar replacement is the most timely and cost effective solution.

**B. Accomplishments/Planned Program**

	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	88.504	99.578	85.857	55.19
RDT&E Articles Quantity	0	0	0	0

**DESIGN AND RISK REDUCTION**

Accomplishments

- Completed critical detailed designs for prime mission (X-band & S-band) radars
- Completed preliminary design of the Mission Communications Suite (MCS)

Planned:

- Complete Pilot Build and Test (X-Band and S-Band Front Ends)
- Continue Common BackEnd software development and array build and test.
- Conduct Mission Equipment Production Readness Reviews

	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	14.000	31.293	52.886	28.164
RDT&E Articles Quantity	0	0	0	0

**SHIPBUILDING**

Accomplishments:

- Awarded ship construction contract
- Awarded ship concept and preliminary design contracts
- Completed three ship preliminary designs in preparation for down-select to one ship construction contractor

Planned:

- Initiate ship detailed design and commence construction

	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost	13.453	1.707	2.083	1.799
RDT&E Articles Quantity	0	0	0	0

**SYSTEM ENGINEERING**

Accomplishments:

- Development of specifications / interface design documents and detailed test plans

Planned:

- Complete designs for non-prime mission equipment (C4I, data handling, classified mission equipment)

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**  
 This program element supports the Naval service's unique requirements in meteorological and oceanographic (METOC) space-based remote sensors. Navy participates in joint efforts to leverage national polar- orbiting and geostationary satellite programs to demonstrate and validate improved warfighter capabilities. These requirements include the need to ensure a smooth transition from the current joint Defense Meteorological Satellite Program (DMSP) to the future National Polar-orbiting Operational Environmental Satellite System (NPOESS). NPOESS readiness and risk reduction preparations are to develop hardware and software that will allow ground stations to receive, ingest and exploit the NPOESS Preparatory Project (NPP) data. Unique naval warfighter capabilities will be transitioned to NPOESS and planned upgrades to NPOESS. These requirements also include the development of alternatives and required capabilities to replace the Geodetic/geophysical Satellite (GEOSAT) Follow-On (GFO) satellite which was launched on February 10, 1998 and is nearing end of life. A replacement to GFO is required to ensure continued support to naval operations.

These requirements include commitments to satellite, sensor, and operational demonstration/development activities as well as transition to fleet applications associated with four satellite programs: 1) the converged National Polar-orbiting Operational Environmental Satellite System (NPOESS), 2) the joint Defense Meteorological Satellite Program (DMSP), 3) the jointly funded Coriolis satellite which includes Navy Satellite Based Wind Speed (WindSat) and Air Force SMEI (Solar Mass Ejection Imager) instruments, and 4) the Geodetic/geophysical Satellite (GEOSAT) Follow-On (GFO) funded entirely by Navy. GFO altimeter data are used to observe significant wave height, ocean thermal and acoustic structure. The Navy METOC Support (Space) project provides for Navy participation in Navy/Air Force cooperative efforts leading to DMSP sensor development, specifically participation in the calibration and validation of instruments and delivery of satellite products to the Fleet. The passive microwave instruments carried on DMSP and future NPOESS satellites provide global oceanic and atmospheric data of direct operational relevance, including sea surface wind, sea ice, and precipitation. WindSat is a partnered program that meets multiple naval remote sensing requirements and provides a significant risk reduction for the NPOESS satellites' Conical Microwave Imaging Sensor (CMIS) instrument. Both the GEOSAT and Navy METOC Support (Space) projects fulfill Navy's obligation to develop naval service-unique, mission critical space-based METOC technology.

This budget reflects changes in investment line description beginning in FY07. This change supports acquisition and development investment lines that support the vision, operations concept, and capability requirements. Changes consolidate and better define RDT&E efforts as well as better reflect the new Commander Naval Meteorological and Oceanographic Command (CNMOC) reorganization.

FY06 included Congressional Add for the Reconfigurable Payload Processor for Staring Sensors (RPPSS) project to establish the viability of Field Programmable Object Array (FPOA) technology to reduce the risk of implementing full-earth staring/Wide Field of View (WFOV) and large Format Focal Plane Arrays (FFPAs) that are being considered for future strategic missile warning systems.

**(U) JUSTIFICATION FOR BUDGET ACTIVITY: BA-7:** This program is funded under OPERATIONAL SYSTEMS DEVELOPMENT because it encompasses engineering and manufacturing development for upgrade of existing, operational systems.

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Navy Meteorological and Oceanographic (METOC) Support (Space) project provides for the naval service's unique sensor development efforts (Navy Satellite Based Wind Speed (WindSat) and Advanced Altimeters) and Navy participation in Defense Meteorological Satellite Program (DMSP) Special Sensor Microwave/Imager (SSM/I) and Special Sensor Microwave Imager Sounder (SSM/IS) calibration/validation efforts in support of the Fleet operational requirements. WindSat, an initiative begun in 1997, is a partnered program that meets multiple naval remote sensing requirements and provides a significant risk reduction for the National Polar-orbiting Operational Environmental Satellite System (NPOESS) satellites' Conical Microwave Imaging Sensor (CMIS) instrument. The passive microwave instruments carried on DMSP and future NPOESS satellites provide global oceanic and atmospheric data of direct operational relevance, including sea surface wind speed, sea ice, and precipitation. The Navy METOC Support (Space) project ensures the naval service's operational requirements are satisfied primarily through demonstration of technologies for inclusion on operational constellations such as DMSP, the National Polar-orbiting Operational Environmental Satellite System (NPOESS) and the National Oceanic and Atmospheric Administration's (NOAA) Geostationary Operational Environmental Satellites (GOES). These efforts fulfill naval service unique requirements that are not funded within the DMSP, NPOESS or GOES programs, and are in accordance with current inter-agency agreements. The project also provides for the Navy's direct participation in the NPOESS Integrated Program Office (IPO), and the application of data provided at the NPOESS Interface Data Processing Segments (IDPSs) to naval METOC warfighting products.

This project reflects changes in investment line description beginning in FY07. This change supports acquisition and development investment lines that support the vision, operations concept, and capability requirements. Changes consolidate and better define RDT&E efforts as well as better reflect the new Commander Naval Meteorological and Oceanographic Command (CNMOC) reorganization.

Accomplishments/Effort/Subtotal Cost	6.279	3.420	3.785	2.694
RDT&E Articles Quantity				

FY06 - Developed additional warfighter products (e.g. sea surface temperature) from the existing Navy Satellite Based Wind Speed (WindSat) data stream. Controlled Coriolis Satellite and monitored health of the WindSat on-orbit payload that provides Fleet ocean wind speed and direction data. Performed sensor calibration and data validation of environmental algorithms generated for Fleet use.

FY07: Determine system design for advanced altimetry mission. Develop additional Warfighter products (sea ice coverage); continue risk reduction to Conical Microwave Imaging Sensor (CMIS) through Navy Satellite Based Wind Speed (WindSat) data exploitation and control Coriolis and monitor state of health of the WindSat on-orbit payload. Monitor Special Sensor Microwave Imager Sounder (SSMIS) performance and continue calibration and validation. Prepare for launch of F-18; Phase C Approval for Advanced Altimeter; Preliminary Design Review for Advanced Altimeter; Global Data Processing System (GDPS) update for sea ice; and F-17 SSMIS Calibration/Validation Final Report.

FY08 - Prepare for launch of F-18. Develop additional Warfighter products (sea ice coverage); continue risk reduction to CMIS through Navy Satellite Based Wind Speed (WindSat) data exploitation and ground control and operations of Coriolis and monitor state of health of the WindSat on-orbit payload. Monitor Special Sensor Microwave/Imager (SSM/I) and SSMIS performance and continue calibration and validation.

FY09 - Complete F-18 SSMIS Cal/Val final report. Develop additional War fighter products (sea ice coverage); continue risk reduction to CMIS through WindSat data exploitation and ground control and operations of Coriolis and monitor state of health of the WindSat on-orbit payload. Monitor SSM/I and SSMIS performance and continue calibration and validation.

Calibration and Validation Activities/ Sensor/Observing Systems (Space)	FY06	FY07	FY08	FY09

Not Applicable

**(U) D. ACQUISITION STRATEGY:**

Naval service unique, space based meteorological and oceanographic (METOC) requirements are not fully funded through Joint or converged national program plans. Particular sensors or data sources with unique naval service mission needs are targeted to accelerate acquisition or ensure threshold accomplishment. WindSat provides risk reduction data and developmental technology that the National Polar-orbiting Operational Environmental Satellite System (NPOESS) Integrated Program Office (IPO) will use in the development of the Conical Microwave Image Sounder (CMIS). CMIS will collect global microwave radiometry and sounding data to produce microwave imagery and other meteorological and oceanographic data. CMIS can be viewed as the follow-on instrument to the Special Sensor Microwave (SSM) instruments Navy developed for the Defense Meteorological Satellite Program (DSMP). It will be the primary instrument for satisfying 20 NPOESS Integrated Operational Requirements Document (IORD) Environmental Data Records (EDRs). These CMIS sensors will be acquired as part of the NPOESS architecture which supports these Navy requirements in the future. Maintenance of rigorous sensor calibration and data validation for operational SSM instruments continues along with algorithm development in support of fleet applications. The Advanced Altimeter technologies will improve radar altimeter resolution and arial coverage to support Navy requirements for sea surface topography measurement in the littorals.

**(U) E. MAJOR PERFORMERS:**

FY06 - FY09 - Naval Research Laboratory, Washington D.C. 60% Satellite Mission and Technical Support, Sensor Calibration and Data Validation

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

This project provides a satellite-borne radar altimeter sensor to obtain ocean topography measurements from which tactically significant features such as ocean fronts and eddies, wave heights, internal acoustic structure, and sea-ice edges are derived. Topography provides a unique and important data source in support of a number of naval service unique warfare areas such as anti-submarine and undersea warfare. Geodetic/geophysical Satellite (GEOSAT) Follow-On (GFO) data are made freely available to other agencies such as the National Oceanic and Atmospheric Administration (NOAA) and the National Aeronautics and Space Administration (NASA) who value its input to studies involving global warming and climate change including El Nino Southern Oscillation (ENSO) effects. Ocean topography data was previously provided by GEOSAT from 1985 until the satellite failed in January 1990. The GFO satellite which was launched in February 1998 provides altimetry data until its end of life and if not replaced there will be a gap in altimetry coverage until an Advanced Altimeter or a National Polar-orbiting Operational Environmental Satellite System (NPOESS) altimeter is available.

This project reflects changes in investment line description beginning in FY07. This change supports acquisition and development investment lines that support the vision, operations concept, and capability requirements. Changes consolidate and better define RDT&E efforts as well as better reflect the new Commander Naval Meteorological and Oceanographic Command (CNMOC) reorganization.

FY06 - Investigated and implemented life extension solutions (e.g. developed work arounds for degraded components). Assessed on-orbit system performance, conducted payload calibration and data validation, refined orbits and resolved performance anomalies. Developed Geodetic/geophysical Satellite (GEOSAT) Follow-On (GFO) metrics for warfighter applications.

FY07 - Investigate and implement life extension solutions to work arounds for degraded components. Assess on-orbit system performance, calibrate payload and validate data, resolve anomalies. Assess impact of differing orbits on metric effectiveness. Complete GFO Performance Validation Reports (every 17 days) and GFO Engineering Anomaly Resolution Reports (upon retirement of anomaly). Complete meteorological and oceanographic (METOC) metric end of year report.

FY08 - Continue investigations and implementation of life extension solutions as work arounds for degraded components. Continue performance assessments and continue to calibrate payload and validate data and to resolve anomalies. Continue assessing impact of differing orbits on metric effectiveness. Complete GFO Performance Validation Reports (every 17 days) and GFO Engineering Anomaly Resolution Reports (upon retirement of anomaly). Complete METOC metric end of year report.

FY09 - Continue investigations and implementation of life extension solutions as work arounds for degraded components. Continue performance assessments and continue to calibrate payload and validate data and to resolve anomalies. Continue assessing impact of differing orbits on metric effectiveness. <p><b>In accordance with the FY 2005 National Defense Authorization Act, RDT&amp;E funding for Joint Forces Command transfers from Navy to Defense-Wide beginning in FY 2007. The new program element is changed from 0305188N BA 7 to 0607828D BA 7.</b></p> <p><b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>                      The Unified Command Plan 2002 assigned Commander, U.S. Joint Forces Command (USJFCOM) with the mission as the Joint Force Integrator. Additionally, the Chairman Joint Chiefs of Staff (CJCS) designated Commander, USJFCOM as lead agent to transform the Armed Forces. In support of these two missions, USJFCOM Joint Interoperability and Integration (JI&amp;I), located within Headquarters USJFCOM, is responsible for joint interoperability and integration of future and fielded capabilities critical to Joint, Multi-National, and Interagency warfighting operations. USJFCOM JI&amp;I works closely with Combatant Commanders/Services/Agencies (C/S/A) to ensure warfighting deficiencies are identified, develops synchronized Doctrine, Organizational, Training, Materiel, Leadership, Personnel, and Facilities (DOTMLPF) capability plans to ensure the warfighter has interoperable capabilities.</p> <p>In addition, on January 7, 2003, the Deputy Secretary of Defense directed expansion of the USJFCOM JI&amp;I role to increase operational through tactical level joint integration of the following capabilities: Common Operational and Tactical Pictures; Combat Identification; Situational Awareness; Adaptive Mission Planning and Rehearsal; Interoperability among Service/Agency intelligence systems; Interoperable Joint Fires, Maneuver, and Intelligence; and Integrated Joint Battle Management Command and Control. Evidencing this increased mission, on December 22, 2004, the Deputy Secretary of Defense directed baseline funds of \$10M in FY 2006 be provided for USJFCOM to develop a repeatable Joint Mission Thread interoperability test and assessment methodology for use in evaluating Joint Battle Management Command and Control Roadmap execution and to demonstrate this methodology in Joint Close Air Support.</p> <p><b>(U) JUSTIFICATION FOR BUDGET ACTIVITY:</b>                      This program is funded under Operational Systems Development because it provides rapid assessment of required Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) interoperability, as well as rapid insertion of capabilities across the DOTMLPF spectrum that meet the joint war fighter's need.</p>

<b>(U) B. Accomplishments/Planned Program</b>				
	FY 06	FY 07	FY 08	FY 09
Integrated Joint Battle Management C2 Capabilities	6.132			
RDT&E Articles Quantity				
<p><b>FY06 Accomplishments:</b> Completed and signed by CDR USJFCOM, OUSD (AT&amp;L) and Vice-Chairman, Joint Chiefs of Staff (VCJCS) the Joint Battle Management Command and Control (JBMC2) Roadmap Version 2.0 (20 Jan 06), developed JBMC2 Campaign Plan, developed Joint Close Air Support (JCAS) Integrated Product Team charters, developed Desk Top Analysis handbook, baselined the Joint Capabilities Mapping Environment (architecture tool), executed JCAS Desktop Analysis, developed JCAS Assessment Annex A to Campaign Plan, developed JCAS Test Plan and Procedures for Events 1-2, developed JCAS Analysis Plan for Events 1-2, developed Doctrine, Organizational, Training, Materiel, Leadership, Personnel, and Facilities (DOTMLPF) Change Requests resulting from the JCAS Desktop Analysis efforts, participated in the Command and Control (C2) Capabilities Based Assessment (CBA) development effort, participated in the Integrated Air and Missile Defense (IAMD) Capabilities Based Assessment (CBA) development effort, developed Single Integrated Air Picture (SIAP) Capability Development Document (CDD), baselined Joint Task Force (JTF) Core HQ Architecture Increment #1, developed and approved the Global Joint Battle Management Command and Control (GJBMC2) Operational Concept, developed the GJBMC2 Concept of Operations (CONOPs), established Time Sensitive Targeting Community of Interest (COI), and developed the Roadmap Coalition Chapter/Annex. Executed JCAS operators' digital JCAS capability requirements surveys with the Combatant Commanders (COCOMs) to identify the priority issues to scope future Joint Digital Close Air Support (CAS) assessment and also determine the use rate of current Joint Terminal Attack Controller (JTAC) digital suites with JCAS Aircraft (what was not used and determined why). Investigated doctrinal and Tactical Technical Procedures (TTP) shortfalls with respect to digital CAS (e.g., target centric approach vs. initial point). Recommend updates to Joint Publication (JP) 3-09.3, Air Land Sea Application Center (ALSA) Joint Fires Pub, JCAS Mission Area (MA) Initial Capabilities Document (ICD). Participated in Joint Effects Targeting System (JETS) ICD and Analysis of Alternatives (AoA) efforts to ensure COCOM identified issues are addressed for this next generation solution for Joint Digital CAS (continued liaison with JETS Team/F-35 Program Managers (PMs). Conducted warfighter assessment (low cost improvements) for enhancing CAS (e.g. Strikelink capability in aircraft, JTAC to AC-130, Gateways, and Imagery &amp; video (Franken Pod/Lightening Rod Pod) ROVER III).</p>				
	FY 06	FY 07	FY 08	FY 09
Joint Operational Concepts and Integrated Architectures	3.297			
RDT&E Articles Quantity				
<p><b>FY06 Accomplishments:</b> In support of Joint Battle Management Command and Control (JBMC2), USJFCOM JI&amp;I continued to develop, maintain, and update Joint Mission Area Joint Operational Concepts and Integrated Architectures which provided support to the warfighter across the "Range of Military Operations." This Joint Operational Concept described the doctrinally based tasks and activities, operational elements, and the time-phased information flows required to accomplish joint military operations. The Joint Integrated Architecture efforts were utilized to assess and analyze doctrine, Concept of Operations (CONOPS), Tactical Technical Procedures (TTPs), system and procedural interoperability, processes, and synchronization issues that impact Joint Forces. The Joint Operational Concepts and Integrated Architectures provided the baseline to identify warfighter requirements and were developed in close coordination with OSD, Joint Staff, COCOMs, and Services.</p>				
	FY 06	FY 07	FY 08	FY 09
Integrated Service and Agencies Intelligence Capabilities	2.626			
RDT&E Articles Quantity				
<p><b>FY06 Accomplishments:</b> USJFCOM JI&amp;I continued to execute the Secretary of Defense and Chairman Joint Chiefs of Staff directives to provide Regional and Functional Combatant Commanders with integrated Service and Agencies Intelligence capabilities among United States Forces, Interagencies, and Allied, and Coalition Forces in support of the Global War on Terrorism (GWOT) and in multiple theaters of operations.</p>

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Tactical Control System (TCS): TCS provides interoperability for command and control of the present and future Tactical and Medium Altitude Endurance (MAE) UAVs and their payloads utilized for Intelligence, Surveillance, Reconnaissance, & Target Acquisition (ISR&TA) and combat assessment. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station (GCS), implementation of NATO (North Atlantic Treaty Organization) Standardization Agreement (STANAG) 4586, and through the use of the Tactical Common Data Link (TCDL). TCS provides connectivity to designated Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) systems for the Navy Vertical Takeoff and Landing (VTOL) Tactical UAV (VTUAV). TCS and VTUAV will implement NATO STANAG 4586 compliance, and weaponization and plug-and-play functionality. TCS will also be evaluated for future Naval UAVs.

VTUAV (popular name 'Fire Scout') provides real-time and non-real-time Intelligence, Surveillance and Reconnaissance (ISR) data to tactical users without the use of manned aircraft or reliance on limited joint theater or national assets. The baseline VTUAV can accomplish missions including over-the-horizon tactical reconnaissance, classification, targeting and laser designation and battle management (including communications relay). The VTUAV launches and recovers vertically, and can operate from air capable ships, as well as confined area land bases. Other characteristics include autonomous air vehicle launch and recovery, autonomous waypoint navigation with command override capability, and the incorporation of an electro-optical/infrared/laser designator-laser range finder modular mission payload. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station, and through the use of the Tactical Common Data Link (TCDL). The data from the VTUAV will be provided through standard DoD Command, Control, Communications, Computers and Intelligence Surveillance, and Reconnaissance (C4ISR) system architectures and protocols.

Navy Small Tactical Unmanned Aircraft System (STUAS) / Tier II UAS: STUAS / Tier II UAS will provide persistent Intelligence, Surveillance, and Reconnaissance (ISR) support for tactical level maneuver decisions and unit level force defense/force protection for Navy ships and Marine Corps land forces. This system will fill the ISR capability shortfalls identified by the Navy STUAS and Marine Corps Tier II UAS efforts. Consisting of three air vehicles, one ground control station, three payloads, and associated launch, recovery and support equipment, this system will support the Navy missions, including building the Recognized Maritime Picture, Maritime Security Operations, Maritime Interdiction Operations, and support of Navy units operating from sea/shore in the Global War on Terror (GWOT), and the Marine Corps close range UAS enabling enhanced decision-making and improved integration with ground schemes of maneuver.

Note: STUAS / Tier II UAS is a new start program.

JTC/SIL: The Joint Technology Center/System Integration Laboratory provides experimentation for UAV technology assessment, insertion, demonstration, transfer, as well as simulation and exercise support.

USMC Vertical Unmanned Aerial Vehicle (VUAV): The USMC VUAV will provide the Marine Corps a Tier III UAV supporting Marine Expeditionary Force (MEF) and Joint Task Force (JTF) level commanders with the required speed and survivability to support USMC Expeditionary Maneuver Warfare (EMW) operations. The system will build on Navy VTUAV and Coast Guard Eagle Eye technology.

Congressional Adds.(FY06)

Joint Operational Test Bed System (JOTBS)

JOTBS is an experimental, ground-based control system that is designed to fly, operate and receive data from all the services and individual UAVs from a single interface.

VTUAV (popular name 'Fire Scout') provides real-time and non-real-time Intelligence, Surveillance and Reconnaissance (ISR) data to tactical users without the use of manned aircraft or reliance on limited joint theater or national assets. The baseline VTUAV can accomplish missions including over-the-horizon tactical reconnaissance, classification, targeting and laser designation and battle management (including communications relay). The VTUAV launches and recovers vertically, and can operate from air capable ships, as well as confined area land bases. Other characteristics include autonomous air vehicle launch and recovery, autonomous waypoint navigation with command override capability, and the incorporation of an electra-optical/infrared/laser designator-laser range finder modular mission payload. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station, and through the use of the Tactical Common Data Link (TCDL). The data from the VTUAV will be provided through standard DoD Command, Control, Communications, Computers and Intelligence Surveillance, and Reconnaissance (C4ISR) system architectures and protocols.

Advanced Airship Flying Laboratory Phase II

Capability studies for development of a modernized naval airship featuring contemporary composited, digital flight controls, vectored thrust and remote piloted capabilities that can provide immediate utility for missions requiring heavy lift (logistics and/or sensor suites), long endurance (measured in days vs. hours), and persistent broad-area Intelligence, Surveillance, and Reconnaissance (ISR).

Congressional Adds. (FY07)

Advanced Airship Flying Laboratory

Capability studies for development of a modernized naval airship featuring contemporary composited, digital flight controls, vectored thrust and remote piloted capabilities that can provide immediate utility for missions requiring heavy lift (logistics and/or sensor suites), long endurance (measured in days vs. hours), and persistent broad-area Intelligence, Surveillance, and Reconnaissance (ISR).

UAV Payload-NBC Detection

Naval UAV Payload effort to be used only for the continuation of an industry based research program for light weight low power Nuclear, Chemical and Biological (NBC) sensors and isotope identification techniques utilizing Micro-Electro-Mechanical systems (MEMS) technology and innovative detection devices to identify airborne chemical/biological threats and hazardous materials.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Tactical Control System (TCS) is developing a standards based system that provides interoperability and commonality for Command and Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) interfaces, and command and control of Navy Unmanned Aerial Vehicles (UAVs), including the Navy Vertical Take-off and Landing Tactical UAV (VTUAV). Interoperability is achieved through the use of the Tactical Control System (TCS) software in the Ground Control Station (GCS), NATO STANAG-4586 compliance, and through the use of the Tactical Common Data Link (TCDL).

TCS and VTUAV will implement NATO STANAG 4586 and plug-and-play functionality. TCS will also be evaluated for future Naval UAVs.

TCS provides a full range of scaleable Unmanned Air System (UAS) capabilities from passive receipt of air vehicle and payload data to full air vehicle and payload command and control. TCS offers the war fighter a common core operating environment to simultaneously receive, process, and disseminate UAV data from different UAS types for reconnaissance, surveillance, and combat assessment.

TCS provides UAS command, control and processing from land and sea based ground control stations. TCS development continues to meet the updated VTUAV Operational Requirements Document (ORD) and add key technologies that will be used by UAS.

TCS maximizes the use of contractor and government off-the shelf hardware and software whenever possible. TCS software is interoperable, and is compliant with the OSD Command and Control, Communications, Intelligence (C3I) Joint Technical Architecture (JTA), and Distributed Common Ground System (DCGS) standards.

B. ACCOMPLISHMENTS / PLANNED PROGRAM

TCS DEVELOPMENT AND INTEGRATION	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	7.360	7.656	7.953	7.582
RDT&E Articles Qty				

Continue TCS integration with VTUAV development. Continue new TCS capabilities to support requirements for Littoral Combat Ship (LCS) integration. Continue TCS NATO STANAG 4586 compliance. Continue TCS Command and Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) interface testing for VTUAV required C4ISR systems. Complete multi-vehicle UAS control through FY2008.

TECHNICAL AND ENGINEERING SERVICES	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.411	1.465	1.437	1.337
RDT&E Articles Qty				

Continue government engineering support, contractor support, program support, and travel for the TCS program.

C. OTHER PROGRAM FUNDING SUMMARY:	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0305204N TACTICAL UNMANNED AERIAL VEHICLES	PROJECT NUMBER AND NAME 2478, Tactical Control System

D. ACQUISITION STRATEGY:

The TCS program continues under the FY04 Congressionally-directed restructure of the program to focus on Navy requirements and standards based on interoperability. Navy requirements for TCS include supporting fielding of the Navy Vertical Take-off and Landing Tactical Unmanned Aerial Vehicle (VTUAV) aboard the Littoral Combat Ship (LCS) in 4th Quarter FY08, addition of plug-and-play payloads, and implementation of NATO Standardization Agreement for Standard Interfaces of UAV Control System for NATO UAV Interoperability (STANAG 4586).

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

VTUAV (popular name 'Fire Scout') provides real-time and non-real-time Intelligence, Surveillance and Reconnaissance (ISR) data to tactical users without the use of manned aircraft or reliance on limited joint theater or national assets. The baseline VTUAV can accomplish missions including over-the-horizon tactical reconnaissance, classification, targeting and laser designation and battle management (including communications relay). The VTUAV launches and recovers vertically, and can operate from air capable ships, as well as confined area land bases. Other characteristics include autonomous air vehicle launch and recovery, autonomous waypoint navigation with command override capability, and the incorporation of an electro-optical/infrared/laser designator-laser range finder modular mission payload. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station, and through the use of the Tactical Common Data Link (TCDL). The data from the VTUAV will be provided through standard DoD Command, Control, Communications, Computers and Intelligence Surveillance, and Reconnaissance (C4ISR) system architectures and protocols.

A VTUAV system is comprised of air vehicles, electro-optical/infrared/laser designator-rangefinder payloads, Ground Control Stations (with TCS and TC DL integrated for interoperability), and a UAV Common Automatic Recovery System (UCARS) for automatic take-off and landings, and associated spares and support equipment.

A program to continue development of the VTUAV to meet the Littoral Combat Ship (LCS) mission requirements was initiated in FY04. Engineering and Manufacturing Development (EMD) is continuing in FY08 and will include design activities for system upgrades and TCS integration. Procurement of two EMD MQ-8B Air Vehicles was initiated in FY04, two additional EMD MQ-8B Air Vehicles initiated in FY05, and five EMD MQ-8B Air Vehicles initiated in FY06. As of 15 Dec 06, VTUAV has completed 245 flights, accumulating more than 213 flight hours.

Program funding in FY08-10 includes effort required to integrate the Coastal Battlefield Reconnaissance and Analysis (COBRA) payload, a mine detection sensor, under development by PMS-495.

The Air Vehicle was redesignated from RQ-8B to MQ-8B on 24 June 2005 per letter from HQ USAF/XPPE.

The VTUAV system is scheduled for a 2nd quarter FY07 Milestone C LRIP decision.

The U.S. Army has selected the MQ-8B as their Class IV UAV for the Future Combat System (FCS). Coordination with the U.S. Army FCS Program is on-going to investigate the potential cost savings for both programs where system commonalities and common logistics support can be identified.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Joint Technology Center/Systems Integration Laboratory (JTC/SIL) is a center of technical excellence to support all Unmanned Air Vehicle (UAV) programs within the services. The mission includes Service-specific and Joint Command, Control, Communications, Computers and Intelligence, Surveillance, and Reconnaissance (C4ISR) programs throughout DoD. The JTC/SIL provides a Government test bed for rapid prototyping, technology insertion and transition, systems engineering, modeling/simulation, training and Command and Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) optimization. The cornerstone of its diverse tool set is the Multiple Unified Simulation Environment (MUSE), which is the Department's simulation/training system of choice for ISR systems, sensors, and platforms.

The Services and Warfighting Commanders have a requirement for the capability to train with a system that provides a real-time simulation environment containing multiple intelligence systems that can be integrated with larger force-on-force simulations. The MUSE creates a realistic operational environment which supports the ability to assess military utility, architecture and CONOPS development, Tactics, Techniques, and Procedures (TTP) development and refinement, conduct emerging concepts experimentation, and C4ISR optimization within warfighting exercises and experiments. It is the only simulation system used by the Combat Commanders and Joint Services to support command and battle staff C4ISR training; there is no alternative available to satisfy those requirements.

The MUSE also creates a realistic operational environment that supports an embedded training capability for multiple Program Managers; tools to minimize acquisition and life cycle cost and schedule impacts; the ability to conduct emerging concepts experimentation, future systems exploration, systems integration, and technology insertion; applications for Joint and Service-specific warfighting exercises; and C4ISR optimization.

MUSE is currently in use within all services and unified commands simulating Predator, Global Hawk, Hunter, Shadow 200, and Pioneer UAVs, national and commercial satellite collectors, P-3, and the U-2. During warfighting exercises, the JTC/SIL integrates imagery simulations with associated C4ISR systems to support execution of critical imagery processes. For those assets normally not available for training, the JTC/SIL provides surrogate systems and interfaces. Distributed training environments, virtually linking participants from various locations worldwide, are routinely supported within the MUSE architecture. The MUSE is also used as a mission rehearsal tool for current on going military combat operations.

Additionally, the JTC/SIL supports a range of materiel developers, integrating prototypes and trainers into the C4ISR and training environments of supported units. The Tactical UAV (TUAV) ground station developed by the JTC/SIL includes an embedded MUSE trainer, and is planned to be incorporated into the VTUAV Ground Control Station (GCS). Interim training capabilities for the Tactical Exploitation System (TES) are currently employed in the joint exercises.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

MUSE DEVELOPMENT	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	.796	.824	.830	.851
RDT&E Articles Qty				

MUSE Development - Initial development of VTUAV model, continued Common Trainer for current platforms, continue to provide C4ISR simulation support to major exercises and demonstrations, complete integration of Tactical Exploitation of National Capabilities (TENCAP) simulation into PC-based MUSE, complete development of virtual Signals Intelligence (SIGINT) platform, continue development of Laser Designator capability, continue upgrade for National Space Assets Enhancements, continue C4I Enhancements, continue initial Fixed Target Damage simulation.

<p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p><b>Navy Small Tactical Unmanned Aircraft System (STUAS) / Tier II UAS</b></p> <p>The Navy Small Tactical Unmanned Aircraft System (STUAS) / Tier II UAS will provide persistent Intelligence, Surveillance, and Reconnaissance (ISR) support for tactical level maneuver decisions and unit level force defense/force protection for Navy ships and Marine Corps land forces. This system will fill the ISR capability shortfalls identified by the Navy Small Tactical Unmanned Aircraft System (STUAS) and Marine Corps Tier II UAS efforts. Consisting of three air vehicles, one ground control station, three payloads, and associated launch, recovery and support equipment, this system will support the Navy missions, including building the Recognized Maritime Picture, Maritime Security Operations, Maritime Interdiction Operations, and support of Navy units operating from sea/shore in the Global War on Terrorism (GWOT), and the Marine Corps close range UAS, enabling enhanced decision-making and improved integration with ground schemes of maneuver.</p> <p>The STUAS and Tier II UAS program is a combined program, and funded through separate USN and USMC Program Elements. USMC RD TEN funding is located in PE 0206313M, R-1 #186.</p> <p>Note: STUAS / Tier II UAS is a new start program.</p>

RDT&E Articles Qty	<b>2*</b>							
<p><b>A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b></p> <p><b>Congressional Adds.</b></p> <p><b>Joint Operational Test Bed System (JOTBS)</b> The Joint Operational Test Bed System is an experimental, ground-based control system that is designed to fly, operate and receive data from all the services; individual UAVs from a single interface.</p> <p><b>Fire Scout RQ-8B (MQ-8B)</b> The Vertical Takeoff and Landing Tactical Unmanned Aerial Vehicle (VTUAV) was designed to provide real-time intelligence, surveillance and reconnaissance data to tactical users without the use of manned aircraft or reliance on limited joint theater or national assets. The VTUAV can accomplish missions including over-the-horizon tactical reconnaissance, classification, targeting and laser designation, and battle management (including communications relay). The VTUAV launches and recovers vertically and can operate from all air capable ships as well as confined area land bases. Other characteristics include autonomous air vehicle launch and recovery, autonomous waypoint navigation with command override capability, and the ability to incorporate Electro-Optical/Infrared/Laser Designator-Laser Range Finder modular mission payload. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station, through implementation of NATO Standardization Agreement (STANAG) 4586 and through the use of the Tactical Common Data Link (TCDL). The data from the VTUAV will be provided through standard DoD Command, Control, Communications, Computers and Intelligence Surveillance, and Reconnaissance (C4ISR) system architectures and protocols.</p> <p>A program to continue development of the VTUAV to meet the Littoral Combat Ship (LCS) mission requirements was initiated in FY04. Engineering and Manufacturing Development (EMD) is continuing in FY07 and will include design activities for system upgrades, and TCS integration. Fabrication of the RQ-8A LRIP 1 system was completed in FY03. Procurement of two EMD MQ-8B Air Vehicles was initiated in FY04, two additional EMD MQ-8B Air Vehicles initiated in FY05, and five EMD MQ-8B Air Vehicles will be initiated in FY06. Two of the five articles initiated in FY06 are funded by this Congressional plus-up, and identified in this exhibit.</p> <p>* These quantities are also reflected in project 2768 for display purposes. The total quantity in FY06 is 5 air vehicles.</p> <p><b>Advanced Airship Flying Laboratory Phase II</b> Capability studies for development of a modernized naval airship featuring contemporary composited, digital flight controls, vectored thrust and remote piloted capabilities that can provide immediate utility for missions requiring heavy lift (logistics and/or sensor suites), long endurance (measured in days vs. hours), and persistent broad-area Intelligence, Surveillance, and Reconnaissance(ISR).</p>

RDT&E Articles Qty					2		4		

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

Along with the Multi-mission Maritime Aircraft (MMA), the BAMS UAV is integral in recapitalizing the Navy's airborne Intelligence, Surveillance and Reconnaissance (ISR) force. BAMS UAV will provide a persistent maritime ISR capability that will play a significant role in the Sea Shield and FORCENet pillars of Sea Power 21. In its Sea Shield role, BAMS UAV's on-station time enables unmatched awareness of the maritime battlespace by sustaining the maritime Common Operational Tactical Picture for Surface Warfare (SUW) and the Global War on Terrorism (GWOT). The system will serve as a Fleet Response Plan enabler while acting as a trip wire for Intelligence Preparation for the Environment (IPE).

BAMS UAV will include an endurance-class UAV that will operate from land-based sites around the world. Sufficient air vehicles at each operating location will provide persistence by being airborne 24 hours a day, 7 days a week out to ranges of 2000 nautical miles. Worldwide access will be achieved by providing coverage to nearly all the world's high-density sea-lanes, littorals and areas of national interest from its operating locations. Because BAMS UAV and the MMA/P-3 have related, complementary missions, it is intended that BAMS UAV will leverage the Maritime Patrol Reconnaissance Forces community to enhance manpower, training and maintenance efficiencies.

BAMS UAV sensors will provide detection, classification and identification of maritime targets. Anticipated sensors to fulfill mission requirements include a maritime radar, electro-optical/infrared (EO/IR) and Electronic Support Measures (ESM) systems. Additionally, BAMS UAVs will have a communications relay capability linking dispersed forces in the theater of operation and serving as a communications node in the Navy's FORCENet strategy. The UAV will provide the Fleet Commander a common operational tactical picture of the battlespace day and night. It will queue other Navy assets for further situational investigation and/or attack and also will provide battle damage assessment. Data analysis will occur in real-time at shore-based Mission Control Systems via satellite communications. Further exploitation can be conducted at shore-based sites or aboard Carrier Vessel Nuclear/Landing Helicopter Dock ships.

The BAMS UAV will be an evolutionary based acquisition, using an incremental development approach. The program is in a pre-Milestone B phase during FY2005-2007, to address technical risk reduction through studies and demonstrations, System Development Demonstration (SDD) contract preparation and Milestone B documentation development activities. Milestone B is planned for late FY 2007 and SDD award in 1Q FY 2008. The SDD contract will be based on a competitive selection process for a Prime Contractor. The first Low Rate Initial Production (LRIP) procurement is planned for FY2011, with deliveries supporting an Initial Operational Capability (IOC) in FY2014.

Two Mission Need Statements (MNS) support the requirement; 1) BAMS and Littoral Armed ISR MNS, and 2) Long Endurance, Reconnaissance, Surveillance and Target Acquisition (RSTA) Capability MNS. The BAMS UAV ORD was signed by the CNO 17 May 2004. BAMS UAV requirements are currently being updated through the Joint Capabilities Integration and Development System (JCIDS) process resulting in a Capabilities Development Document (CDD) in time to support the Milestone B decision.

**B. ACCOMPLISHMENTS / PLANNED PROGRAM:**

SD&D CONTRACT	FY 2006	FY 2007	FY 2008	FY 2009

APN Initial Spares: 060510 BAMS UAV	0	0	0	0	0	0	16.183	19.192		35.375

D. ACQUISITION STRATEGY:

The BAMS UAV program will develop and field a persistent maritime Intelligence Surveillance Reconnaissance capability. Commonality with existing unmanned and manned systems will be utilized to the greatest extent possible for all segments of the BAMS UAV program (i.e., air-vehicle, ground segment and payloads).

The BAMS UAV will be an evolutionary based acquisition, using an incremental development approach. The program is in a pre-Milestone B phase between FY2005-2007 to address technical risk reduction through studies and demonstrations, prepare the SDD contract and develop Milestone B documentation. Milestone B is planned for late FY2007 and SDD award in 1Q FY 2008. The SDD contract will be based on a competitive selection process for a Prime Contractor. The first Low Rate Initial Production (LRIP) contract is planned for FY2011, with deliveries supporting an Initial Operational Capability (IOC) in FY2014.

**(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

In FY05, the advanced sensor developments provided the technology transition modules for operational use necessary to support the EP-3E JMOD Common Configuration (JCC) program and provide the mechanism required for timely dissemination of intelligence information to operational forces.

Provides funds for the development of sensor systems to improve present airborne reconnaissance capabilities. The developments are driven by evolving collection requirements and modern technology advances. The developments allow for the necessary changes required to meet an integrated, objective airborne reconnaissance architecture as defined in the Integrated Airborne Reconnaissance Strategy (IARS) and amplified in the Airborne Reconnaissance Information Technical Architecture (ARITA). The Advanced Sensors Development Program implements successful proof-of-concept efforts accomplished in the Advanced Technology Program, other Service/Agency developments, and Congressionally-funded initiatives leading to producible sensor systems for airborne platforms. Upon successful sensor prototype demonstration, technology sensor developments are turned over to the Services for procurement and platform integration. This effort focuses on developments, which support sensor system interoperability and standardization of multi-Service and multi-platform applications. In addition, funds provide for the development/integration and operational assessment of components for the EP-3E and Special Projects Aircraft (SPA) and follow-on candidate aircraft.

There are two primary objectives for the Advanced Technology funding: (1) to evaluate the utility and maturity of technology for airborne reconnaissance applications and (2) to reduce the risk of employing emerging technologies in system upgrades, new system acquisitions, or Advanced Concept Technology Demonstrations (ACTDs), by integrating and exercising them in developmental and operational tests. These technologies help satisfy the requirements of the objective architecture set forth in the Integrated Airborne Reconnaissance Strategy (IARS). These technology investments are also identified in the Airborne Reconnaissance Technology Program Plan (ARTPP), published in November 1994. Congress added funds in FY 2005 to (1) Initiate flight test preparations for Advanced Camera, (2) assess effectiveness of target detection and false alarm rejection algorithms.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Provides funds for the development of sensor systems to improve present airborne reconnaissance capabilities fielded in both the EP-3E and Special Projects Aircraft (SPA) platforms. The developments are driven by evolving collection requirements and modern technology advances. The developments allow for the necessary changes required to meet an integrated, objective airborne reconnaissance architecture as defined in the Integrated Airborne Reconnaissance Strategy (IARS) and amplified in the Airborne Reconnaissance Information Technical Architecture (ARITA). The advanced sensor program includes technical analysis, systems engineering assessments, planning, and development for advanced airborne sensor systems. This effort focuses on developments which support sensor system interoperability and standardization of multi-Service and multi-platform applications. The EP-3E and Special Projects will undergo a series of incremental modifications via an evolutionary acquisition process which began in FY 2001. The advanced sensor developments described herein will provide the technology transition modules necessary for the overall migration of the airborne fleet to JASA, (i.e., sensors, ground systems, data links, and platforms), and provide the mechanism required for timely dissemination of intelligence information to operational forces.

FY05 began the integration of JMOD Common Configuration (JCC) into all EP-3 aircraft. These efforts carry forward the developments from prior years and continue the development efforts to ensure that EP-3 aircraft maintain their interoperability and relevance to emerging threats and changing technology. This funding provides for the development of the JCC capabilities and Spirals. The JCC baseline program builds on a common baseline with two spirals. Spiral 1 (ForceNet) includes high band and special collection subsystems (Story Finder, MPEG) and data dissemination (Story Teller). Spiral 2 includes development of additional special collection signal capabilities and obsolescence upgrades.

In FY06 the JCC program was further restructured due to delays in the Aerial Common Sensor (ACS) recapitalization program. The restructure added an obsolescence evolution and a JCC Spiral 3 upgrade to maintain EP-3E mission system viability until recapitalization platform can be fielded (est. 2017 IOC, 2019 FOC). This funding supported the required development of the restructured JCC program. The program procured an Engineering Development Model (EDM) in FY06 for Developmental Testing (DT) of the Spiral 2 system in FY07 to support the system Low Rate Initial Production (LRIP) Decision in FY08. Spiral 3 includes signal exploitation, low-band direction finding, Remote Tuning Receivers, Integrated Information Operations (I/O) and Environment Control System (ECS) upgrades. The program will procure two (2) Spiral 3 Engineering Development Models (EDM). The first EDM will be procured in FY08 for Developmental Testing (DT) of the system in FY09 and the Low Rate Initial Production (LRIP) Decision and procurement in FY10. The second Spiral 3 EDM production representative asset will be procured in FY09 to support Operational Testing (OT) in FY10 and the Full Rate Production (FRP) Decision and procurement in FY11. Obsolescence, Quick Response Capabilities (QRCs) and technical refresh efforts will be accomplished in conjunction with the above JCC Spiral upgrades to sustain EP-3E capabilities and viability until recapitalization/replacement. Funds were added to ensure EP-3E relevance beyond FY17 and to develop follow-on capabilities to be migrated into the recap platform.

The Special Projects Modernization and Common Configuration Baseline (MCCB) program provides rapid insertion of new capabilities including improved communications, collection and analysis capabilities and weight reduction. Additionally, MCCB addresses technology refresh and obsolescence engineering. Most of the MCCB upgrades are based on stand-alone Government-Off-The-Shelf and Commercial-Off-The-Shelf (GOTS/COTS) systems.

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7	PROGRAM ELEMENT NUMBER AND NAME 0305206N, AIRBORNE RECONNAISSANCE SYSTEMS	PROJECT NUMBER AND NAME 2694, ADVANCED SIGNAL RECOGNITION
---	--	--

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Spiral 1 integration/test collection subsys	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	1.056			
RDT&E Articles Qty				

Spiral 1 integration and test includes high band and special collection subsystems (Story Finder and MPEG) and data dissemination (Story Teller), developed under 2694 in previous years.

Spiral 2 development collection signal	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	10.940	2.586	.862	.500
RDT&E Articles Qty	1			

Restructured Spiral 2 development includes, obsolescence and data fusion capabilities. Additional special collection signal capabilities, Data Fusion and MPEG frequency extension development. Procure one Engineering Development Model (EDM) in FY06 for FY07 Developmental Testing (DT).

Spiral 3 development RFD, DF, I/O, ECS	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	5.152	17.265	23.315	23.682
RDT&E Articles Qty			1	1

Spiral 3 development includes low-band Radio Frequency Distribution (RFD) and Direction Finding (DF) subsystem replacement, Remote Tuning Receivers, Intergrated Information Operations (I/O) and Environmental Control System (ECS) upgrades.

Technical Refresh dev for obsolete sys	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	3.211	6.820	2.585	2.269
RDT&E Articles Qty				

The Technical Refresh development of replacement technology for obsolete and unsupported collection and support mission systems.

Develop Spiral upgrades to collection subsys	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost	12.361	8.235	6.980	7.344
RDT&E Articles Qty				

Imagery engineering investigations completed. Developed and demonstrated Special Projects Projects (SPA) Direction Finding (DF) upgrades for SP Systems Requirements Review (SRR). SPA Communications/Infrastructure updated. SPA Modernization and Common Configuration Baseline (MCCB) program. Develop Spiral upgrades to the special collections subsystem, data communications and infrastructure. Address technology refresh and obsolescence issues. Mission system weight reduction development.

FY2006: This effort developed and demonstrated advanced Intelligence, Surveillance, and Reconnaissance (ISR) systems for small-to-large UAV/manned platforms and ground/air-based control and display systems (CADS) providing screening, control, exploitation, and networked dissemination of simultaneous multiple dissimilar sensor ISR systems. FY2007: Continue the development and flight demonstration of advanced ISR avionics for small-to-large unmanned/manned air systems platforms and ground/air-based control and display systems (CADS). These will provide screening/control/exploitation/ dissemination of simultaneous multiple dissimilar sensor ISR systems.

Development of passive collision avoidance and reconnaissance system. This development targets the UAV mission to provide situational awareness and sense and avoid capability. Passive uncooled cameras will be integrated to a data collection system and flight tested to evaluate system level assumptions in flight and to further develop and mature tracking algorithms already developed. Design level effort will be initiated to design and build a small processor suite that is directly integratable to the UAVs existing electronics suite that is capable of accepting up to 10 camera inputs.

<b>(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:</b>								
<p>The Distributed Common Ground System – Navy (DCGS-N) is the Navy’s portion of the Office of the Secretary of Defense (OSD) DCGS effort. The Department of Defense (DOD) has defined a DCGS architecture that will be verifiably compatible and interoperable across all of the Services’ intelligence, surveillance and reconnaissance (ISR) systems and operations. The DOD DCGS will access and ingest data from space borne, airborne, subsurface, and surface ISR collection assets, intelligence databases and intelligence producers. This collected data will be shared across a Joint enterprise using the DCGS Integration Backbone (DIB) to enhance interoperability of ISR information across Joint forces through the use of common enterprise standards and services. It will support Joint Task Force (JTF)-level combat operations and support Joint Task Force Commanders and below with critical intelligence for battle management and information dominance across the full spectrum of operations, including peace, conflict, war, and the Global War on Terrorism.</p> <p>The DCGS-N system represents the integration of: 1) The processing and exploitation of tactical Imagery Intelligence (IMINT) and Signal Intelligence (SIGINT) as well as the multi-intelligence correlation capability of Tactical Exploitation System-Navy (TES-N); 2) The precision target geopositioning, mensuration, and imagery dissemination capabilities of the Joint Services Imagery Processing System – Navy (JSIPS-N); 3) Selected national IMINT requirements and processing capabilities from the National Geospatial Intelligence Agency (NGA); and 4) Exchange of Intelligence, Surveillance, Reconnaissance and Targeting (ISR&amp;T) and Command and Control (C2) information with the Global Command and Control System – Maritime (GCCS-M).</p> <p>DCGS-N will become part of the DoD DCGS Network Enterprise via the DCGS Integration Backbone (DIB). As the DIB is developed by the Air Force, DCGS-N will stay abreast of expanding requirements and ensure compliance with the DoD DCGS network architecture. Engineering work is funded to migrate legacy Joint Fires Network (JFN)/JSIPS-N systems to this network environment. The government is the integrator for the DCGS-N system.</p> <p>The Navy is focusing on establishing an ISR Enterprise way ahead that will emphasize a reach back strategy with a focus on MHQ/MOC activities providing intelligence products to support deployed ship and shore operations. As a result the funding profile and procurement schedule were modified to reflect this way ahead.</p> <p>Planned procurements include three (3) Tier 1 systems in FY08, two (2) Tier 1 and four (4) Tier 2 systems in FY09, two (2) Tier 1 and eight (8) Tier 2 systems in FY10, seven (7) Tier 2 and four (4) Tier 3 systems in FY11, nine (9) Tier 2 and four (4) Tier 3 systems in FY12 and ten (10) Tier 3 systems in FY13. These new installations will replace the existing legacy JSIPS N/JFN systems currently fielded.</p>

(U) Schedule:

POM 08 was the first opportunity to conduct a bottom-up review of the DCGS-N program since its inception in January 2004. The overall knowledge gained as a result of the review and implementation of revised management processes based on the experience from initial DCGS-N development efforts led to moving Increment 2 development to FY11. Corresponding testing events have also been adjusted on the schedule.

DCGS-N Testbeds:	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost		3.000	3.000	1.500
RDT&E Articles Quantity				

Funds the Navy's contribution to the Distributed Development, Test, Demonstration, and Experimentation Network.

**FY07:** Begin effort to establish a distributed net-centric approach to demonstrate, test, and evaluate DCGS joint interoperability among Service DCGS Integration Labs, Agency test facilities, DCGS Imagery Testbed, and the Joint Systems Integration Center.

**FY08:** Conduct interoperability T&E among service and agency DCGS labs, test facilities, etc.

**FY09:** Continue coordinated T&E among various service and agency DCGS labs and test facilities to ensure continued interoperability as system changes occur.

Common Security and Discovery Services:	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost		1.000	1.000	1.000
RDT&E Articles Quantity				

Effort to migrate to common security and discovery services within the DCGS programs via Net-Centric Enterprise Services (NCES). This effort will improve the coordination and the acceleration of the introduction of NCES services into the DCGS/Intelligence, Surveillance and Reconnaissance (ISR) enterprise. This funding provides minimal full-time staffing to support the execution of the project plan.

**FY07:** User identification, authentication, and role-based access; User discovery of DCGS Enterprise Intel data and User request for exploitation of specific Intel imagery; and Delivery of User requested DCGS Enterprise Intel data and specific Intel imagery for exploitation; Participation in development and demonstration pilots of Core Enterprise Services (CES) and in the Enterprise Services Working Group (ES WG)

**FY08:** Continue participation in development and demonstration of CES and in the ES WG; Continue to follow Pilot Plan, which includes expanding services and capabilities

**FY09:** Continue participation in development and demonstration of CES and in the ES WG; Continue to follow Pilot Plan; integrate DCGS testbed capabilities into Project Plan

Concept of Operations (CONOPS):	FY 06	FY 07	FY 08	FY 09
Accomplishments/Effort/Subtotal Cost		0.750	0.750	0.750
RDT&E Articles Quantity				

**FY07-FY09:** Development of a CONOPS that ensures DCGS interoperability with Services and Coalition partners. This effort will maximize ISR processing capability and provide a common understanding of the direction and means to the desired end-state.

**(U) D. ACQUISITION STRATEGY:**

The Distributed Common Ground System - Navy (DCGS-N) program will utilize contracting vehicles already in place for the existing Army Tactical Exploitation System (TES) and Joint Services Imagery Processing System – Navy (JSIPS-N) programs. The Navy plan is to adapt these programs and develop interoperability with the USAF DCGS Integration Backbone (DIB) for support of Navy Network Centric Warfare Time Critical Targeting. The government is the system integrator for the DCGS-N system.

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Provides funding for the Navy's Aerial Common Sensor (ACS) program. Provide funds for Navy ACS platform development. ACS is the Navy's recapitalization of existing EP-3E capabilities and offers a transformational platform to fulfill the Navy and OSD requirements for migration to the Joint Airborne SIGINT Architecture (JASA). RDT&E efforts under ACS will ensure connectivity to multi-service platforms and ground stations, procure five ACS test platforms and develop a mission system that will integrate Intelligence, Surveillance and Reconnaissance (ISR) mission requirements. ACS contract awarded 4th quarter FY2004 to Lockheed Martin Integrated Systems and Solutions, Littleton, Colorado. Army terminated contract for convenience on 12 January 2006. Army and Navy, in coordination with Air Force, are co-leading an OSD-directed ISR study. ISR study was completed 31 July 2006. In process of being briefed 1st quarter FY07.

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This Program Element addresses projects under the Navy Modeling and Simulation (M&S) Office. It supports technical and management initiatives directed by Congress, Department of Defense (DoD), Secretary of the Navy (SECNAV), and Chief of Naval Operations (CNO) with the aim of bringing organization and focus to the development and use of M&S throughout the Navy and DoD. It provides a central agency for the formulation and implementation of policy and guidance in M&S, and represents Navy interests in Joint and other agency initiatives. It funds efforts to define and coordinate the corporate Navy M&S policy and guidance to evolve an interoperable and reusable core M&S capability consistent with the M&S technical framework prescribed by DoD. Efforts are organized around four product areas: (1) Engineering Studies and Analysis: identifies and measures the relevance of existing and emerging standards, technologies and services necessary to guide Navy M&S use; (2) Products and Services: promotes the policy, standards and technologies necessary to guide more efficient development and use of M&S across the Navy, including development and management of the Navy Modeling and Simulation Information Service (NMSIS); (3) M&S Quality Assurance Program: establishes and manages a disciplined process of model Verification, Validation and Accreditation (VV&A); and (4) Simulation Experiments: supports M&S use in Navy exercises and experiments across a wide variety of warfighting and supporting communities. Specifically, Simulation Experiments integrate appropriate models and simulations into Fleet exercises to test, validate and evaluate for possible transition to operationally relevant M&S products in support of Navy operations, training, acquisition, analysis and assessment.

## E. PERFORMANCE METRICS:

This program supports ongoing efforts to define, develop and utilize M&S technologies, standards and techniques in DoN and Joint programs across a wide range of disciplines and technical arenas. As such, performance metrics are specific to individual projects initiated under this program element. Representative examples of performance criteria for M&S support include the following: VV&A of deployed M&S systems to support Fleet and Force missions and assessments; degree of composability and adaptability of system architectures employed in M&S systems; ability of M&S systems to replicate and permit recreation of force or system interactions that otherwise would be performed by more labor-intensive or expensive personnel, forces or elements; degree to which M&S frameworks would permit rapid integration and employment of analytic capabilities for the analysis and documentation of warfighter missions, weapons systems or Tactics, Techniques and Procedures (TT&P); and ability of a specific M&S technology or technique to meet the requirements specified in an individual project supported by this program.

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 2007

Exhibit R-2a

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0308601N      PROGRAM ELEMENT TITLE: MODELING AND SIMULATION SUPPORT

PROJECT NUMBER: 9658N Navy Space and Naval Warfare Command Net Centric

COST: (Dollars in Thousands)

Project Number & Title	FY 2006 Actual	FY 2007 Estimate	FY 2008 Estimate	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate
2222 MODELING & SIMULATION								
	6,611	7,475	7,832	8,007	8,198	8,384	8,543	8,706

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project addresses critical coordination of Navy M&S efforts, integrates individual programs into a coherent whole, promotes reuse of resources, and aligns Navy efforts with Joint programs. It develops and maintains a comprehensive repository of models, simulations and authoritative data to support broad-based Navy requirements. It promotes reusability through the Quality Assurance process for models, simulations and data, and enhances interoperability by coordinating and reviewing Navy's transition to DoD-mandated standards for distributed simulations. The project participates in Fleet exercise experiments, distributed simulations and demonstrations such as Limited Objective Experiments (LOE), Virtual at Sea Training (VAST), and Virtual Missile Range (VMR).

B. ACCOMPLISHMENTS/PLANNED PROGRAM:

	FY 2006	FY 2007	FY 2008	FY 2009
ENGINEERING STUDIES AND ANALYSIS	3,118	3,222	3,774	3,814

This activity conducts engineering studies and analyses aimed at determining the feasibility and applicability of proposed standards or technical approaches to Navy M&S, and investigate Service-unique requirements for standards or guidance. Individual efforts focus on developing or evaluating approaches to optimize training, assessments and acquisition functional/mission objectives through more efficient development and use of M&S. This activity develops methodologies and standards that will result in model and data reusability and interoperability through the formulation of a technical framework. These standards will support the full range of architecture and engineering design and analysis requirements across the Navy. This activity also provides an M&S degree program through the Naval Postgraduate School, Modeling Virtual Environments and Simulation (MOVES) curriculum.

For FY07, the Navy Modeling and Simulation Office reallocated funds between the four functional areas (Engineering Studies and Analyses; Products and Services; M&S Quality Assurance; and Simulation Experiments) to more closely reflect current priorities for modeling and simulation support to the Fleet/Force. The increase in overall FY07 budget and the earlier reallocation of funds among the functional areas account for the change in this functional area.

FY 2006 Accomplishments:

- Continued to segment the Embedded Simulation Infrastructure and two Mission Applications and continued to prepare and demonstrate documentation for test and release in Global Command and Control System (GCCS) and Global Command and Control System/Maritime (GCCS/M).
- Continued to develop a set of models, architectures, and standards for communications M&S.
- Continued to work with the MOVES Institute and the MOVES degree program to provide military relevant thesis topics for research.
- Continued M&S support to Fleet Forces Command (FFC) for the CNO-directed Task Force Sim.

# UNCLASSIFIED

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET  
Exhibit R-2a

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0308601N      PROGRAM ELEMENT TITLE: MODELING AND SIMULATION SUPPORT

PROJECT NUMBER: 9658N Navy Space and Naval Warfare Command Net Centric

- Continued M&S utilization in Campaign/Mission assessments to support OPNAV N70 analysis of warfighting requirements.

FY 2007 Plans:

- Continue all efforts of FY06.

FY 2008 Plans:

- Continue all efforts of FY07.

FY 2009 Plans:

- Continue all efforts of FY08.

	FY 2006	FY 2007	FY 2008	FY 2009
PRODUCTS AND SERVICES	1,346	1,500	1,599	1,682

This activity supports development of common services, tools, databases and standards to ensure the integration and connectivity of M&S products employed in Naval assessments, in training and acquisition, and among operational communities. It manages and maintains the Navy M&S Information System (NMSIS), as a central M&S information resource to support informed M&S investment decision making across Navy. It provides essential planning and coordination of M&S efforts with other Services, the Office of Secretary of Defense (OSD), the Joint Staff, and other agencies to develop policies and procedures necessary for M&S standardization within the Navy. It provides annual updates to the Naval M&S Catalog, Master Plan, and Investment Strategy.

For FY07, the Navy Modeling and Simulation Office reallocated PROJECT 2222 funds between the four functional areas (Engineering Studies and Analyses; Products and Services; M&S Quality Assurance; and Simulation Experiments) to more closely reflect current priorities for M&S support to the Fleet/Force. The increase in overall FY07 budget and the earlier reallocation of funds among the functional areas account for the change in this functional area.

FY 2006 Accomplishments:

- Continued to promote and enhance state-of-practice and technology within the Navy M&S community.
- Continued the development, servicing and use of NMSIS as directed under applicable DoD DIR, SECNAVINST, and OPNAVINST.
- Continued to organize and facilitate quarterly Navy M&S Technical Interchange Meetings to bring together the Navy M&S community for a direct interchange of M&S requirements, technology, standards and experience.
- Continued to foster and develop the Navy M&S Standards Process that draws M&S experts from the acquisition, training and operational communities, and from industry.
- Continued development of a Navy Enterprise M&S Support Plan.

FY 2007 Plans:

- Continue all efforts of FY06.

	FY 2006	FY 2007	FY 2008	FY 2009
M&S QUALITY ASSURANCE PROGRAM	439	520	529	541

This activity implements and manages the Modeling and Simulation (M&S) Quality Assurance development of the VV&A process and guidelines for modeling, simulation, and data. It reviews both new and legacy M&S VV&A plans and reports, and develops and maintains the Naval M&S VV&A repository. It establishes and implements a VV&A training curriculum for developers and accreditors, and provides an annual VV&A assessment to CNO.

For FY07, the Navy Modeling and Simulation Office reallocated funds between the four functional areas (Engineering Studies and Analyses; Products and Services; M&S Quality Assurance; and Simulation Experiments) to more closely reflect current priorities for modeling and simulation support to the Fleet/Force. The increase in overall FY07 budget and the earlier reallocation of funds among the functional areas account for the change in this functional area.

FY 2006 Accomplishments:

- Continued to develop and update case studies within the VV&A Handbook.
- Continued to incorporate information developed for training/education into the VV&A Handbook.
- Continued to coordinate with the NMSIS effort to update and Beta test new VV&A data entry fields as required.

FY 2007 Plans:

- Continue all efforts of FY06.

FY 2008 Plans:

- Continue all efforts of FY07.

FY 2009 Plans:

- Continue all efforts of FY08.

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0308601N      PROGRAM ELEMENT TITLE: MODELING AND SIMULATION SUPPORT

PROJECT NUMBER: 9658N Navy Space and Naval Warfare Command Net Centric

	FY 2006	FY 2007	FY 2008	FY 2009
SIMULATION EXPERIMENTS	1,708	2,233	1,930	1,970

This activity supports Fleet exercises and experiments through the application of distributed simulations across a wide variety of warfighting and supporting communities. Specifically, it develops and integrates appropriate M&S into Fleet Synthetic Training (FST), and develops simulation efforts to test and evolve the standards for models, interfaces, and data. It supports development of tools necessary to enable the seamless access and use of operationally relevant M&S products to support Navy training, warfare assessments and acquisition requirements.

For FY07, the Navy M&S Office reallocated funds between the four functional areas (Engineering Studies and Analyses; Products and Services; M&S Quality Assurance; and Simulation Experiments) to more closely reflect current priorities for modeling and simulation support to the Fleet/Force. The increase in overall FY07 budget and the earlier reallocation of funds among the functional areas account for the change in this functional area.

FY 2006 Accomplishments:

- Continued to define Fleet training initiatives and M&S enhancements.
- Continued to support the Olympic Challenge series of Joint experimentations using a synergetic M&S approach.
- Continued development of the Virtual at Sea Training (VAST) concept to provide the capability to conduct training in a virtual environment that would otherwise require a land-based training range or be cost or schedule prohibitive.
- Continued to document elements of the maritime virtual environment and models that can be used effectively to enable reuse in naval simulations and to establish best practices where standards are not yet feasible.
- Continued the upgrade of Virtual Missile Range (VMR) virtual threat capabilities.

FY 2007 Plans:

- Continue all efforts of FY06.

FY 2008 Plans:

- Continue all efforts of FY07.

FY 2009 Plans:

- Continue all efforts of FY08.

9999 Portable Laser Depainting System	2.563	3.188						

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The F/A-18A-F Service Life Assessment Program (SLAP) is assessing the structural condition of the F/A-18 fleet in order to determine what modifications are necessary to extend the aircraft designed life limits to allow it to achieve CNO inventory requirements. The goal of the SLAP program is to identify critical structures and components that can achieve the extended service life limit goals for all models. An increase in total landings and flight hours would allow the F/A-18A/B/C/D/E/F to meet OPNAV inventory requirements, to include planning for the announced one year JSF slide. This effort is required to be conducted for these airframes to ascertain what actions and modifications must be taken to safely operate each system beyond its designed life until the targeted end of service life.

The T-45 Service Life Assessment Program (SLAP) is assessing the structural condition of the T-45 Fleet in order to determine structural modifications necessary to extend the aircraft designed service life to support Pilot Training Requirements (PTR) and Naval Flight Officer Training Requirements (NTR) until 2026. The T-45 aircraft structure is currently fatigue limited to 14,400 flight hours based on initial full-scale fatigue tests conducted from 1992-1996. This service life limit prevents the T-45 fleet from meeting PTR/NTR requirements past 2016. Recent studies have determined that the fleet squadrons have not been flying the T-45 aircraft as aggressively as the initial fatigue studies predicted. These studies demonstrate that the 14,400 flight hour service life can likely be extended to 21,600 flight hours, which will support meeting PTR/NTR until 2026. A T-45 Service Life Assessment Program (SLAP) is required to assess the critical areas within the structure that require modifications to achieve a 21,600 flight hour service life. This assessment will be based on the updated fleet aircraft usage spectrum and future predicted training missions of the T-45 aircraft. The assessment will address critical structural areas that are either

Begin analysis of numerous data points to provide exploitation of complete structural fatigue testing with the expectation of extending the current service life of F/A-18E/F flight hours from 6,000 to 9,000 hours.

C. OTHER PROGRAM FUNDING SUMMARY:	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost
APN-5 P.E. 0204136N F/A-18 OSIP (11-99)	82.735	111.285	112.020	115.984	123.820	123.828	130.803	184.479	145.320	1,353.119

D. ACQUISITION STRATEGY:

The SLAP program employs sole source contracts with Boeing, the aircraft prime manufacturer. SLAP consists of structural analyses of the main landing gear, arresting hook and catapult back-up structures, vertical tails, wings and fuselage. These analyses will provide for the development of aircraft modifications necessary to extend total aircraft landings, catapults /arrestments, and flight hours. Engineering Change Proposals (ECPs) generated by the SLAP analyses will be incorporated into Service Life Management Program (SLMP) under OSIP (11-99). F/A-18E/F Service Life Assessment Program (SLAP) will employ sole source contracts with Boeing, the aircraft prime manufacturer. The program will consist of exploitation of complete structural fatigue testing with the expectation of extending the current service life of the F/A-18E/F. Conducting F/A-18E/F SLAP to study the aircraft lifetime will provide a better estimate of aircraft service life and a follow on Service Life Extension Program (SLEP).

APPROPRIATION/BUDGET ACTIVITY RDT&E,N / BA-7		PROGRAM ELEMENT NUMBER AND NAME 0702207N, DEPOT MAINTENANCE (NON-IF)			PROJECT NUMBER AND NAME 3182, T-45 SLAP				
COST (\$ in Millions)		FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013
3182 T-45 SLAP				.992	3.981	.995			
RDT&E Articles Qty									

A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The T-45 Service Life Assessment Program (SLAP) is assessing the structural condition of the T-45 fleet in order to determine structural modifications necessary to extend the aircraft designed service live to support Pilot Training Requirements (PTR) and Naval Flight Officer Training Requirements (NTR) until 2026. The T-45 aircraft structure is currently fatigue limited to 14,400 flight hours based on initial full-scale fatigue tests conducted from 1992-1996. This service life limit prevents the T-45 fleet from meeting PTR/NTR requirements past 2016. Recent studies have determined that the fleet squadrons have not been flying the T-45 aircraft as aggressively as the initial fatigue studies predicted. These studies demonstrate that the 14,400 flight hour service life can likely be extended to 21,600 flight hours, which will support meeting PTR/NTR until 2026. A T-45 Service Life Assessment Program (SLAP) is required to assess the critical areas within the structure that require modifications to achieve a 21,600 flight hour service life. This assessment will be based on the updated fleet aircraft usage spectrum and future predicted training missions of the T-45 aircraft. The assessment will address critical structural areas that are either landing and/or flight hour limited.

B. ACCOMPLISHMENTS / PLANNED PROGRAM:

Analysis of T-45 structural condition	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost			.992	3.981
RDT&E Articles Qty				

The T-45 Service Lift Assessment Program will analyze structural critical areas requiring modification to increase service life from 14,400 flight hours to 21,600 flight hours, publishing results in three separate reports (Updated Finited Element Model report, SLAP Internal Loads Methodology report, and SLAP Fatigue Analysis report).

C. OTHER PROGRAM FUNDING SUMMARY:

FY 2006    FY 2007    FY 2008    FY 2009    FY 2010    FY 2011    FY 2012    FY 2013    To Complete    Total Cost

Not applicable

D. ACQUISITION STRATEGY:

The SLAP is a sole source contract with Boeing, the aircraft prime contractor. SLAP consists of structural analyses of landing gear, arresting hook and catapult back-up structure, vertical tail, wings and fuselage. These analyses will facilitate the development of aircraft modifications necessary to extend total aircraft service life from 14,400 to 21,600 flight hours.

(U) A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

The Avionics Component Improvement Program (AvCIP) develops, integrates and tests solutions to address critical readiness and reliability deficiencies, obsolescence, loss of sustainability, and top repair cost drivers in Navy in-service avionics systems. Project candidates are collected from across all platforms, reviewed, competed and selected in the year prior to funding allocation. AvCIP was a new start in FY06 as documented in PE 0604215N, Standards Development, Project Unit 0572. Transfer in FY 2007 and out as documented in PE 0604215N, Standards Development, Project Unit 0572.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:**

The Avionics Component Improvement Program (AvCIP) provides design and development, test and evaluation, and integration support to resolve critical readiness and reliability deficiencies, obsolescence, loss of sustainability and top repair cost drivers of in-service Navy avionics systems. Funds are competitively allocated across multi-platform commodity and platform-specific projects with the objective of maintaining Avionics systems effectiveness at levels required to ensure mission success. AvCIP has been endorsed by the OSD Business Initiatives Council (BIC) as a cooperative tri-service program that adopts the better business practices and proven resourcing models of the Engine CIP. Resources are directed just prior to the execution year, allowing funds to address the most current fleet issues and accelerate solution fielding. Lack of out-year deliverable specificity is mitigated through definition of Avionics capability evolution in the Core Avionics Master Plan. Although Avionics association to digital technology brings challenges to keep pace with Moore's Law and stay ahead of obsolescence, it also affords significant opportunity to reap benefits of emerging advancements. Conversion of legacy systems from analog to digital components has consistently resulted in reliability gains that significantly reduce maintenance/repair activity/costs, save weight and space, and increase operational availability. Modern open system architecture technology insertion improves system upgradeability, by reducing integration time and cost. Avionics systems are the vehicles that enable platform connectivity and interoperability. AvCIP will help platforms integrate the modern technology that will allow them to keep pace with the rapid evolution of transformational network centric operations development. AvCIP also provides sponsors a vehicle to address unanticipated performance issues or critical changes in threat, tactics or operational demands revealed during deployment without disrupting program budget profiles designed for other purposes. AvCIP is designed to support manned and unmanned, common and unique, fixed and rotary wing aircraft electronics systems, including communications, navigation, surveillance, sensors, combat identification, civil interoperability, safety, mission data processing and display, and network connectivity equipment. Initiative selection is based upon analysis of operational priority, performance improvement, capability benefit, scope of applicability across fleet platform or weapon system inventory, technical risk, delivery time, cost and life cycle return on investment. AvCIP was a new start in FY06 as documented in PE 0604215N, Standards Development, Project Unit 0572. Transfer in FY 2007 and out as documented in PE 0604215N, Standards Development, Project Unit 0572.

**B. ACCOMPLISHMENTS / PLANNED PROGRAM:**

Addresses avionic critical readiness	FY 2006	FY 2007	FY 2008	FY 2009
Accomplishments / Effort / Sub-total Cost		1.370	1.635	1.892
RDT&E Articles Qty				

Investigate High Value Return on Investment Candidates, addressing avionics critical readiness and reliability deficiencies, obsolescence, loss of sustainability and top repair cost drivers. Prioritize critical avionics performance, capability and obsolescence problems that require immediate attention. Pursue solutions to these problems based upon urgency, warfighting contribution and return on investment. Develop and test system solutions based on priority. Resources will cover program management, engineering, contracting and logistics efforts; design and development, logistics elements such as technical data, support equipment, provisioning, and training; prototypes; platform integration; and developmental/ operational testing.

**C. OTHER PROGRAM FUNDING SUMMARY:**

	FY 2006	FY 2007	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2013	To Complete	Total Cost

D. ACQUISITION STRATEGY: The Avionics Component Improvement Program (AvCIP) will annually compete candidate solutions according to criticality of operational contribution, technical risk, return on investment, and breadth of application. OPNAV N88 & N43, NAVAIR, NAVICP and the Fleet will participate in project selection for execution year allocation. The AvCIP IPT will monitor project execution and track return on investment using N43 Flying Hour Program metrics. Modification solutions include modular hardware, software and material upgrades. Resources will cover program management, engineering, contracting and logistics efforts; design and development, logistics elements such as technical data, support equipment, provisioning, and training; prototypes; platform integration; and developmental/ operational testing.

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:** The Manufacturing Technology (ManTech) program is intended to improve the productivity and responsiveness of the U.S. defense industrial base by funding the development and transition of leading edge manufacturing technologies. The ManTech program is executed through a Center of Excellence (COE) strategy. A majority of the COEs are consortium based with only a small group of technical and management personnel at the center. ManTech projects are primarily performed by industry participants that bill the COE which, in turn, bills the Navy which causes a non-traditional financial execution profile for the program. The program therefore does not meet traditional execution benchmarks. The ManTech program, by providing seed funding for the development of moderate to high risk process and equipment technology, permits contractors to upgrade their manufacturing capabilities. Ultimately, the program aims to produce high-quality weapon systems with shorter lead times and reduced acquisition costs.

**PROGRAM CHANGE SUMMARY EXPLANATION:**

Technical:

Schedule:

**C. OTHER PROGRAM FUNDING SUMMARY:**

Not applicable.

**D. ACQUISITION STRATEGY:**

Efforts have been focused on the Integrated Systems Investment Strategy platforms: DDG 1000 (formerly DD(X)), CVN 21, Littoral Combat Ship (LCS), and the Virginia Class Submarine as well as aircraft/other programs. Due to a recent change in strategy, FY07 and out will increasingly focus on affordability efforts for DDG 1000 (formerly DD(X)), CVN 21, LCS, and Virginia Class Sub with some concentration on improvements for non-ship systems.

**E. PERFORMANCE METRICS:**

The ManTech program's overall goal is to transition leading edge technology for the production of Navy weapons systems. Individual project metrics are tailored to the needs of specific acquisition programs. Example

PROJECT NUMBER: 1050            PROJECT TITLE: MANUFACTURING TECHNOLOGY

COST: (Dollars in Thousands)

Project Number & Title	FY 2006 Actual	FY 2007 Estimate	FY 2008 Estimate	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	FY 2012 Estimate	FY 2013 Estimate
1050 MANUFACTURING TECHNOLOGY	55,445	54,963	56,445	56,705	58,929	59,823	60,326	60,833

**A. MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:** The ManTech project is intended to improve the productivity and responsiveness of the U.S. defense industrial base by funding the development of manufacturing technologies. Major areas of endeavor both underway and planned include: advanced manufacturing technology for electronics assembly, laser metalworking, flexible computer manufacturing, composites, metal working, and welding technology. The ManTech project is being integrated into the Seapower 21 and Joint Warfare Operational Capability process and will utilize the results of these initiatives as appropriate in the program planning process. The ManTech project is aimed at assisting acquisition programs in meeting performance and affordability goals by inserting manufacturing process solutions early into the design phase.

**B. ACCOMPLISHMENTS/PLANNED PROGRAM:**

	FY 2006	FY 2007	FY 2008	FY 2009
<b>METALS PROCESSING AND FABRICATION</b>	18,988	19,725	21,570	21,620

The objective of the Metals Processing and Fabrication activity is to develop affordable, robust manufacturing processes and capabilities for metals and special materials critical to defense weapon system applications. Major areas that support this objective include: processing methods, special materials, joining, and inspection and compliance. These efforts directly impact the cost and performance of future aircraft, rotorcraft, land combat vehicles, surface and subsurface naval platforms, space systems, artillery and ammunition, and defense industry manufacturing equipment.

Funding in this area is increasing from FY 2007 to FY 2008 to better support the shipbuilding affordability focus and corresponding increase in metals fabrication and processing technical work.

## **FY 2006 Accomplishments:**

- Continued process improvements to DDG-1000 (formerly DD(X)) Program for surface hull treatment application processes to support critical design review schedule. (DDG-1000 Advanced Bonding Methods for Steel Structures)
- Continued testing and validation of adhesive bonded joints to support critical design review and technical insertion to reduce radar cross section, weight, and life-cycle costs for DDG-1000 (formerly DD(X)) program. (Large Marine Composite-to-Steel Adhesive Joints)
- Continued transition of high-productivity, cost-effective welding processes for large, thick-section, high-strength steel structures to shipyard production to enhance the survivability of DDG-1000 (formerly DD(X)). (Manufacturing Large Marine Structures)
- Continued evaluation of material properties of small-scale production heat of 10% Nickel (Ni) material for CVN 21. (High Strength and Toughness Naval Steels for Ballistic Protection) (Ballistic 10% Ni Steel)
- Continued Laser Welded Lightweight Panel Structure Fabrication and Application for CVN 21, developed inter-panel joint concepts and preliminary design concept to improve productivity. (Laser Welded Lightweight Panel Structure Fabrication - NMC)
- Continued rapid response and teaching factory activities.
- Continued Hybrid Laser Beam Welding effort for pipe welding for submarine applications (Hybrid Laser Beam Welding).
- Continued Erosion Resistant Coatings for Stage I Compressor Blisks effort. (Erosion Resistant Coatings for Stage 1 Compressor Components)
- Continued Manufacturing Process Development for Elimination of Weld Distortion of CVN 21 Heavy Plate Erection Units. (Elimination of Weld Distortion of CVN 21 Heavy Plate Erection Units)
- Continued Navy Unmanned Combat Air System (N-UCAS) Metallic Manufacturing Technology Transition effort to integrate with the Composites-Joint Unmanned Combat Air System (J-UCAS) Systems Design and Manufacturing Development (SDMD), Boeing St. Louis. (N-UCAS Structural Design and Manufacturing Development)
- Continued Turbine Inspection Techniques effort.
- Continued development of preliminary designs and manufacturing concepts, identifying material changes and specific processes to be improved. (Advanced Surface Ship Watertight Closures)
- Completed manufacturing process improvements supporting CVN 21 and J-UCAS.
- Completed analysis with Naval Surface Warfare Center (NSWC) and Northrop Grumman Ship Systems (NGSS) of key components and substructures that can be converted to low-cost titanium for center of gravity and structural weight savings on CVN 21. (Issues associated with Fabrication of Titanium Components for CVN 21)
- Completed Laser Welded Corrugated Core (LASCOR) Fabrication for CVN 21, Application Development of

LASCOR effort: Designed, fabricated, tested, and performed final application demonstration for various repair, stud attachment, and joining technologies (Phase I).

- Completed Automated Thermal Plate effort by demonstrating a system for automated thermal plate forming of complex steel shapes to reduce fabrication cost and signature of the DDG-1000 (formerly DD(X)). (Automated Thermal Plate Forming)
- Completed Hot Section Corrosion Protection for 501-K34 Gas Turbine effort. (Hot Section Corrosion for 501-K34 Gas Turbine)
- Completed Modeling and Simulation for Carrier Construction Planning and Sequencing effort for CVN 21.
- Completed DDG-1000 (formerly DD(X)) Collarless Construction effort to develop and test methods for selecting most viable collarless construction techniques for DDG-1000 (formerly DD(X)) fabrication. (Collarless Construction)
- Completed Development of Cost-Effective, Low-Manganese Flux Core Welding Electrode for Joining High-Strength Steels effort with shipyard verification of trial production advanced weld wire. (Cost-Effective, Low-Manganese Flux Core Welding Electrode)
- Completed Improved Affordability of Titanium Parts for Marine Corps M777 Lightweight 155MM Howitzer effort by implementing flow formed titanium tubes into full rate production. (Titanium Parts for Lightweight 155M Howitzer)
- Completed J-UCAS Structural Welding effort.
- Completed Weld Quality Improvement/Distortion Reduction effort for CVN 21 carriers.
- Initiated Friction Stir Welding (FSW) effort for LCS. (Low Cost FSW of Aluminum for LCS Applications)
- Initiated corrosion mitigation efforts for the SH-60 helicopter. (Corrosion Resistant Coatings for Magnesium Transmission Gearboxes)
- Initiated facility simulation /optimization effort for Blast & Paint Facility at Marinette Marine. (LCS Paint Facility Design)
- Initiated facility simulation effort at Austal USA to assess benefits of alternatives to shipyard production flow. (Austal USA - Facility Design and Simulation)
- Initiated development of methods to improve the control of accuracy for structure fabrication. (Improved Dimensional Accuracy for LCS)
- Initiated effort to join composite structures for CVN 21. (CVN 21 Composites Joining)
- Initiated development of tandem arc welding process of high strength steels for CVN 21 fabrication. (Tandem Gas Metal Arc Welding (GMAW) for High Strength Steel Structures)
- Initiated development of hybrid-laser beam welding for use in fabrication of complex ship panels. (Hybrid Laser Welding of Ship Structures)
- Initiated development of translational friction welding for replacement of individual airfoils for

aircraft engine blisks. (Translational Friction Weld Repair of Blisks)

- Initiated development of technology to join armor sub-panels for the Expeditionary Fighting Vehicle (EFV) armor skirt. (EFV Armor Skirt Manufacturing Development)
- Initiated effort to improve manufacturability and performance of pallets for AGS on DDG-1000 (formerly DD(X)). (Low-Cost Pallet Systems for DDG-1000 AGS)
- Initiated effort to develop, optimize, and demonstrate forming process for CVN components and determine material properties. (Alloy 625 Formability for Future Carriers)
- Initiated effort to evaluate castings as forming process for DDG-1000 (formerly DD(X)) applications. (DDG-1000 Improved Tee Sections for High-Strength Steel Structures)
- Initiated effort to evaluate sources of contaminants, controls, and remediation processes for removal of contaminants to support coating tanks. (CVN Preparation Methods for Coating Tanks)
- Initiated effort to address current production issues in weld defects in large diameter Alloy 625 pipes with new or modified procedures and equipment. (SSN Alloy 625 Pipe Welding)

## **FY 2007 Plans:**

- Continue all FY 2006 efforts less those noted as completed above.
- Complete transition of high-productivity, cost-effective welding processes for large, thick-section, high-strength steel structures to shipyard production to enhance the survivability of DDG-1000 (formerly DD(X)). (Manufacturing Large Marine Structures)
- Complete Hybrid Laser Beam Welding effort for pipe welding for submarine applications. (Hybrid Laser Beam Welding)
- Complete testing and validation of adhesive bonded joints to support critical design review and technical insertion to reduce radar cross section, weight, and life-cycle costs for the DDG-1000 (formerly DD(X)) program. (Large Marine Composite-to-Steel Adhesive Joints)
- Complete effort to join composite structures for CVN 21. (CVN 21 Composites Joining)
- Complete development of tandem arc welding process of high strength steels for CVN 21 fabrication. (Tandem Gas Metal Arc Welding (GMAW) for High Strength Steel Structures)
- Complete development of hybrid-laser beam welding for use in fabrication of complex ship panels. (Hybrid Laser Welding of Ship Structures)
- Complete development of technology to join armor sub-panels for the EFV armor skirt. (EFV Armor Skirt Manufacturing Development)
- Complete Manufacturing Process Development for Elimination of Weld Distortion of CVN 21 Heavy Plate Erection Units. (Elimination of Weld Distortion of CVN 21 Heavy Plate Erection Units)

- Complete Turbine Inspection Techniques effort.
- Initiate identification of requirements, candidate materials, and application techniques for an improved interior treatment on SSN-774 class subs and initiate testing. (SSN-774 Damping Material Application)
- Initiate applications and develop application techniques and equipment for High Solids coatings on DDG-1000 (formerly DD(X)) and other platforms. (Coating Application Improvement - formerly High Solids Coatings)
- Initiate project to explore commercially available mechanically attached fittings and belled-end pipe joining techniques for SSN-774 applications. (SSN Alternative Pipe Joining and Fittings)
- Initiate new effort for welding processes for large, thick-section, high-strength steel structures. (Large Marine Structure Hull Integration)
- Initiate VCS material management effort to develop a material management system to reduce acquisition costs for Virginia Class Submarines. (VCS Material Management)
- Initiate Design for Production Process Improvement effort to develop an enhanced design build process to support design decision trade-offs. (Design for Production Process Improvement)
- Initiate outfitting process improvement effort to support design decisions and trade-offs in VCS outfitting. (Outfitting Process Improvement)
- Initiate CVN 21 Power Unit Assembly Facility and Carrier Visual Build effort to optimize carrier build. (Optimization of CVN 21 Power Unit Assembly Facility and Carrier Visual Build)
- Initiate laser cladding effort to develop laser cladding technologies for use in sub construction. (Laser Cladding for Submarines)
- Initiate metalworking and joining efforts to address improvements/affordability for DDG-1000 (formerly DD(X)), CVN 21, Virginia Class Submarine, and LCS.

## **FY 2008 Plans:**

- Continue all FY 2007 efforts less those noted as completed above.
- Complete N-UCAS Metallic Manufacturing Technology Transition effort to integrate with the Composites-J-UCAS SDMD, Boeing St. Louis. (N-UCAS Structural Design and Manufacturing Development)
- Complete facility simulation/optimization effort for Blast & Paint Facility at Marinette Marine. (LCS Paint Facility Design)
- Complete facility simulation effort at Austal USA to assess benefits of alternatives to shipyard production flow. (Austal USA - Facility Design and Simulation)
- Complete FSW effort for the LCS. (Low Cost FSW of Aluminum for LCS Applications)
- Complete development of translational friction welding for replacement of individual airfoils for aircraft engine blisks. (Translational Friction Weld Repair of Blisks)

	FY 2006	FY 2007	FY 2008	FY 2009
<b>OTHER (REPAIR TECH, ENERGETICS, GULF COAST, AND TECHNICAL ENGINEERING SUPPORT)</b>	10,400	10,945	12,322	12,382

The "Other" activity includes repair technology, energetics, and technical engineering support. Repair technology addresses repair, overhaul, and sustainment functions that emphasize remanufacturing processes and advancing technology. Energetics efforts concentrate on developing energetics solutions to ensure the availability of safe, affordable, and quality energetics products largely in support of Program Executive Office (PEO) Integrated Warfare Systems (IWS).

Funding in this area is increasing from FY 2007 to FY 2008 to better support the shipbuilding affordability focus and corresponding technical work.

## **FY 2006 Accomplishments:**

- Continued to provide technical engineering support for the ManTech Program.
- Continued project to provide PEO (Carriers) with a portable device for aircraft carrier propulsion system health monitoring. (CVN Propulsion Health Monitoring)
- Continued effort for submarine Vertical Launch System (VLS) tube repair tools. (VLS Tube Repair)
- Continued effort on an automated rotor blade stripping system and workcell designs associated with rotor blade repair. (Helicopter Blade Refurbishment)
- Continued work with ATK Thiokol Propulsion to scale-up and implement the alternative manufacturing process. (Alternative Manufacture of Energetic Material 1,3,5-triamino-2,4,6-trinitrobenzene (TATB))
- Continued effort to demonstrate a continuous process to manufacture high volume, low cost, nitrogen based gun propellants, including a co-extrusion process for manufacture of co-layered propellants. (Flexible Manufacturing of Nitrogen Based Gun Propellants)
- Continued development of a pre-production laser/GMA hybrid pipe welding system. (Hybrid Pipe Welding System)
- Continued development of a comprehensive technical training and data collection program for structural welders and fitters, applying elements of Best Practices Lean technologies. (Technical Training and Data Collection (NGSS))
- Continued re-engineering internal supply chain/material delivery process. (Re-engineer Internal Supply Chain (NGSS))
- Completed Virginia-Class structural fabrication facility design effort to incorporate product centric manufacturing principles and robotic processes into self-sufficient and self-governing product lines. (Product Centric Facility Design)
- Completed development of a man-portable Gas Metal Arc (GMA) welder for shipyard applications. (Ultra-light Welding System)
- Completed wireless automated diagnostics/prognostics project and implemented on mobile diesel engines in shipyards.
- Completed evaluation of feasibility of welding High-Strength Low-Alloy (HSLA)-100 steel with reduced preheat, specifically for submerged arc welding of plates more than 1 5/8 inch thick and GMA welding of plates more than one inch thick. (High Heat Input Welding of Thick HSLA-100 with Reduced Pre-Heat)
- Completed development of "Super Finishing Process" to salvage helicopter gears and reduce procurement and maintenance costs. (CH-46 Gear Repair)
- Completed project to identify technologies to reduce the time and costs of alignment and inspection procedures associated with the maintenance of submarines. (Alignments and Inspections)

- Completed development of a safer, repeatable, cost effective and environmentally sound alternative to live fire testing of M198, M777 and M1A1 recoil assemblies. (M198 Howitzer Mechanism Recoil Testing)
- Completed effort to evaluate finite element analysis methods to determine if they apply to thick Navy structures of CVN 21 ships. (Predictive Weld Distortion in Thick Navy Structures, Northrop Grumman Newport News (NGNN))
- Completed program to develop standards and processes for digital radiography of piping and plate welds supporting CVN 21 and Virginia-Class construction non-destructive testing. (Digital Radiography)
- Completed effort to minimize distortion and resulting re-work and costs in Virginia-Class hull ring manufacturing. (Weld Distortion Prediction Initiative)
- Completed building and evaluation of hand-held analyzer that can provide test results for determining presence of PCB contamination. (HAZMAT Analyzers)
- Completed development of a manufacturing process to reduce the cost and lead-time associated with polycan fabrication. (Polycan Fabrication)
- Completed development of new weld size and inspection criteria based on fitness for service. (Portable Weld Inspection Management System)
- Completed project to develop Waterborne Tank and Void Preservation process using new long-life high-solids coatings and Ultrahigh Pressure Water Jet (UHPWJ) surface preparation for tanks and voids on CVN 21 carriers. (Carrier Tank Coatings)
- Initiated evaluation of remanufacturing/repair operations at blast and paint facilities at USMC Depot at Albany, GA and identified process optimization/improvement options. (USMC Depot Blast & Paint Lean Production Optimization)
- Initiated Repair Technology projects based on high priority depot needs.
- Initiated energetics efforts to support PEO (IWS) and other acquisition programs.
- Initiated shipbuilding efforts for DD(X), LCS, CVN 21, and Virginia Class submarines.

## **FY 2007 Plans:**

- Continue all FY 2006 efforts less those noted as completed above.
- Complete development of a pre-production laser/GMA hybrid pipe welding system. (Hybrid Pipe Welding System)
- Complete development of a comprehensive technical training and data collection program for structural welders and fitters, applying elements of Best Practices Lean technologies. (Technical Training and Data Collection (NGSS))
- Complete re-engineering internal supply chain/material delivery process. (Re-engineer Internal Supply

- Initiate advanced shipbuilding efforts to address improvements/affordability for DD(X), CVN 21, Virginia Class submarines, and LCS.

	FY 2006	FY 2007	FY 2008	FY 2009
<b>ELECTRONICS PROCESSING AND FABRICATION</b>	10,000	10,690	10,900	10,900

Electronics Processing and Fabrication efforts develop and deploy affordable, robust manufacturing processes and capabilities for electronics critical to defense applications over their full life cycle. Efforts create new and improved manufacturing processes on the shop floor, as well as repair and maintain facilities such as depots and logistics centers, with a strong emphasis on process maturation.

## **FY 2006 Accomplishments:**

- Continued Light Activated Semiconductor Switch (LASS) for CVN 21.
- Continued Electro-Optics Rapid Response efforts such as fiber optic training and troubleshooting efforts to support integration of fiber into new and legacy aircraft and ships.
- Continued Helmet Mounted Displays effort to reduce cost and improve durability of F/A-18 and Joint Strike Fighter (JSF) helmet mounted visor. (Helmet Mounted Display Visor)
- Completed F-18/DDG-1000 (formerly DD(X)) Microwave Monolithic Integrated Circuit (MMIC) Flip Chip Second Source validation and transfer effort.
- Completed ALQ-99 Band 4 Jammer effort (Phase 1) to increase production yields.
- Completed Hermetic Sealing of T/R Modules to provide significant improvement in affordability of T/R Modules for SPY-3 radar through use of more commercial packaging and manufacturing methods.
- Completed Manufacturing & Packaging of Power Systems for PEO Carriers and PEO Ships: Developed packaging methodologies for transmission and storage of switching devices and subsystems for pulsed power systems.
- Completed MicroElectroMechanical Systems (MEMS) Affordability Program.
- Completed effort to bring current and voltage sensors designed for high power applications from Technical Readiness Level 4 up to Technical Readiness Level 6 through a series of development phases for the manufacture of the sensor systems and developed a test bed for qualification of the system.
- Completed Lead-Free & Environmentally Safe Manufacturing project to reduce the risk of implementing current environmentally safe components and materials.
- Initiated effort on small Ku-band phased arrays suitable for high data-rate airborne relays and communications networks. (SiGE-Based System-on-Chip for Low-Cost Weight Phased Array Antennas)

- Initiated Phase 2 effort to improve the manufacturability of the AN/ALQ-99 Band 4 Transmitter-Antenna Output Traveling Wave Tube (OTWT). (Manufacturability of OTWT for Jammer Applications)
- Initiated project to replace CRT based units on F/A-18 to significantly improve aircraft availability while reducing maintenance and logistics costs. (Digital Heads-Up Display)
- Initiated effort to address manufacturing issues of future high-power silicon carbide based components for solid state power substations for future Navy ships such as CVN 21. (High-Power Silicon Carbide PiN Diode Manufacturing)
- Initiated effort to determine applicability and performance capability of fiber optic acoustic sensors to reliably detect underwater swimmers approaching ships in port locations. (Underwater Swimmer Detection System)
- Initiated effort to further improve fiber light acceptance and transmission capabilities for DDG-1000 (formerly DD(X)). (DDG-1000 Remote Source Lighting)
- Initiated effort to develop the manufacturing technology to enable the Directional Infrared Countermeasures (DIRCM) mid-infrared laser subsystem technology to be ready for insertion in 2007-8 timeframe. (Multispectral Mid-IR Lasers for DIRCM)
- Initiated advanced electronics and electro-optics efforts to address improvement and affordability issues for DDG-1000 (formerly DD(X)), CVN-21, Virginia Class submarines, LCS, F/A-18, EA-18G, and others.

## **FY 2007 Plans:**

- Continue all FY 2006 efforts less those noted as completed above.
- Complete LASS for CVN 21.
- Complete Phase 2 effort to improve the manufacturability of the AN/ALQ-99 Band 4 Transmitter-Antenna OTWT. (Manufacturability of OTWT for Jammer Applications)
- Initiate effort to reduce the cost and improve the reliability of fiber optic wound sensors for Virginia Class submarines. (Conformal Acoustic Velocity Sensor CAVES for Virginia Class Sub)
- Initiate high-G packaging and miniaturization effort for deeply integrated inertial guidance units (High-G Packaging and Miniaturization for Deeply Integrated Inertial Guidance Units)
- Initiate LCS Antenna Affordability Phase II effort. (LCS Reconfigurable Antenna)
- Initiate sonar and navigation effort for Virginia Class submarine. (Sonar and Navigation for Virginia Class)
- Initiate advanced electronics and electro-optics efforts to address improvements/affordability for DDG-1000 (formerly DD(X)), CVN-21, Virginia Class submarines, LCS, F/A-18, EA-18G, and others.

FY 2008/2009 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET  
Exhibit R-2a

DATE: February 2007

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0708011N

PROJECT NUMBER: 1050

PROGRAM ELEMENT TITLE: INDUSTRIAL PREPAREDNESS

PROJECT TITLE: MANUFACTURING TECHNOLOGY

## **FY 2008 Plans:**

- Continue all FY 2007 efforts less those noted as completed above.
- Complete Helmet Mounted Displays effort to reduce cost and improve durability of F/A-18 and JSF helmet mounted visor. (Helmet Mounted Display Visor)
- Complete project to replace CRT based units on F/A-18 to significantly improve aircraft availability while reducing maintenance and logistics costs. (Digital Heads-Up Display)
- Complete effort to determine applicability and performance capability of fiber optic acoustic sensors to reliably detect underwater swimmers approaching ships in port locations. (Underwater Swimmer Detection System)
- Complete effort to further improve fiber light acceptance and transmission capabilities for DDG-1000 (formerly DD(X)). (DDG-1000 Remote Source Lighting)
- Complete effort on small Ku-band phased arrays suitable for high data-rate airborne relays and communications networks. (SiGE-Based System-on-Chip for Low-Cost Weight Phased Array Antennas)
- Complete LCS Antenna Affordability Phase II effort. (LCS Reconfigurable Antenna)
- Initiate advanced electronics and electro-optics efforts to address improvements/affordability for DDG-1000 (formerly DD(X)), CVN-21, Virginia Class Submarine, LCS, F/A-18, EA-18G, and others.

## **FY 2009 Plans:**

- Continue all FY 2008 efforts less those noted as completed above.
- Complete effort to address manufacturing issues of future high-power silicon carbide based components for solid state power substations for future Navy ships such as CVN 21. (High-Power Silicon Carbide PiN Diode Manufacturing)
- Complete effort to reduce the cost and improve the reliability of fiber optic wound sensors for Virginia Class submarines. (Conformal Acoustic Velocity Sensor CAVES for Virginia Class Sub)
- Complete sonar and navigation effort for Virginia Class submarine. (Sonar and Navigation for Virginia Class)
- Initiate advanced electronics and electro-optics efforts to address improvements/affordability for DDG-1000 (formerly DD(X)), CVN-21, Virginia Class Submarine, LCS, F/A-18, EA-18G, and others.

PROJECT NUMBER: 1050

PROGRAM ELEMENT TITLE: INDUSTRIAL PREPAREDNESS

PROJECT TITLE: MANUFACTURING TECHNOLOGY

	FY 2006	FY 2007	FY 2008	FY 2009
<b>COMPOSITES PROCESSING AND FABRICATION</b>	6,000	6,863	6,900	6,900

The primary technical goal of the Composites Processing and Fabrication activity is improving weapon systems affordability, enhancing weapon system effectiveness and improving reliability/war-fighter readiness through the increased utilization of composite materials and structures. This is being achieved through the development and maturation of affordable, robust manufacturing and assembly processes that fully exploit the benefits of composite materials.

The increase in funding between FY 2006 and FY 2007 reflects realignment from other activities to more closely align funding with planned program requirements.

**FY 2006 Accomplishments:**

- Continued project to develop advanced manufacturing techniques for alternate JSF Weapons Bay Door (WBD) design that employs integrated structure concepts to reduce both weight and cost. (Weapons Bay Door)
- Continued effort to develop methods for CVN 21 Weight Reduction. (CVN 21 Weight Reduction)
- Continued effort to develop and implement bonded steel-to-composite joint technology that is producible and cost effective while meeting the functional requirements of structures, signatures and longevity for the DDG-1000 (formerly DD(X)). (Large Marine Composite to Steel Bonded Joint)
- Continued development and refinement of low-cost composites manufacturing approaches for key vehicle areas. (N-UCAS System Design and Manufacturing Demonstration)
- Completed project to develop low cost manufacturing and joining processes for skin panels that can be incorporated into a deckhouse design for the Advanced Electric Ship Demonstrator (AESD) that would allow the testing of future topside concepts. (AESD Deckhouse)
- Completed development efforts on Advanced Hawkeye satellite communications antenna and initiated application of technology to advanced antennas being developed by PEO IWS for CVN 21 application. (Affordable Integrated Structural Apertures)
- Completed development of manufacturing processes to produce high temperature organic polymer radomes for the Phase III and IV Advanced Medium Range Air-to-Air Missile (AMRAAM). (Development of Manufacturing Processes to Produce High Temperature Capable Composite Radomes)
- Completed project to develop a robust cost-effective composites manufacturing process that incorporates current hardware interfaces so that Lock-In Lock-Out Composite (LIOC) hatches can be fabricated from lightweight materials for the ASDS. (Manufacturing Technology for ASDS LIOC Hatch)

PROGRAM ELEMENT TITLE: INDUSTRIAL PREPAREDNESS

PROJECT NUMBER: 1050

PROJECT TITLE: MANUFACTURING TECHNOLOGY

- Initiated project for the insertion of titanium graphite reinforcement for engine bay doors on the F-18. (Titanium-Graphite for F/A-18 Engine Bay Doors)

## **FY 2007 Plans:**

- Continue all efforts of FY 2006 less those noted as completed above.
- Complete full scale WBD manufacturing demonstration and testing. (Weapons Bay Door)
- Complete effort to develop methods for CVN 21 Weight Reduction. (CVN 21 Weight Reduction)
- Complete effort to develop and implement bonded steel-to-composite joint technology that is producible and cost effective while meeting the functional requirements of structures, signatures and longevity for the DDG-1000 (formerly DD(X)). (Large Marine Composite to Steel Bonded Joint)
- Complete development and refinement of low-cost composites manufacturing approaches for key vehicle areas. (N-UCAS System Design and Manufacturing Demonstration)
- Initiate affordability effort for DDG-1000 (formerly DD(X)) Helodeck stiffeners. (DDG-1000 Helodeck Stiffeners Affordability)
- Initiate affordability effort for DDG-1000 (formerly DD(X)) Radomes. (DDG-1000 Radomes Affordability)
- Initiate Virginia Class Sail Cusp effort to replace current steel and syntactic foam design with a lower cost composite cusp for the VA Class (Composite Sail Cusp).
- Initiate Virginia Class Impeller effort to replace current titanium forging that requires complex machining with a more affordable composite design (VCS Impeller).
- Initiate V-22 and H53 frames effort to replace current aluminum frames with more affordable composite frames made with enhanced automated weaving processes (Composite Frame Manufacturing Technology - V-22 and H-53).
- Initiate other projects to address improvements/affordability of DDG-1000 (formerly DD(X)), CVN 21, Virginia Class submarines, and others.

## **FY 2008 Plans:**

- Continue all FY 2007 efforts less those noted as completed above.
- Complete project for the insertion of titanium graphite reinforcement for engine bay doors on the F-18. (Titanium-Graphite for F-18 Engine Bay Doors)
- Complete Virginia Class Sail Cusp effort to replace current steel and syntactic foam design with a lower cost composite cusp for the VA Class (Composite Sail Cusp).
- Complete V-22 and H53 frames effort to replace current aluminum frames with more affordable composite

	FY 2006	FY 2007	FY 2008	FY 2009
<b>CORPORATE INVESTMENTS</b>	10,057	6,740	4,753	4,903

The Corporate Investments area is focused on accelerating defense industrial enterprise progress toward implementation of world-class industrial practices as well as advanced design and information systems that support weapon system development, production, and sustainment. Key emphasis areas include: 1) Benchmarking and accelerating the implementation of world-class industrial practices throughout the contractor base; 2) Demonstrating and validating advanced business practices and information technologies capable of streamlining management functions in all industrial base tiers; and 3) Leveraging information technologies in pursuit of tighter coupling of all defense industrial enterprise elements. Corporate Investment efforts create improvements to cost and cycle time for weapon system development, production, and repair.

The funding decreases in FY 2007 and FY 2008 reflect realignments to other activities to more closely align funding with planned program requirements in support of the shipbuilding affordability efforts.

## **FY 2006 Accomplishments:**

- Continued Best Manufacturing Practices efforts in surveys, the Program Manager's WorkStation, and Collaborative Work Environment.
- Continued Packaging Reconfigurable Antenna Solutions for Improved Mission Adaptability for the Littoral Combat Ship effort.
- Completed LASCOR/10% Ni Steel CVN Tails effort.
- Completed development of decision support system. (Gulf Coast Region Maritime Technology Center, NGSS LPD-17, potentially DDG-1000 (formerly DD(X))
- Completed the development of a low cost Vacuum Assisted Resin Transfer Mold (VARTM) process to produce Virginia-Class "Special Feature" parts that do not require significant post processing/machining and meet drawing and performance specifications. (Composite Manufacturing Technology for "Special Feature")
- Initiated efforts to continue to improve the Navy industrial base through above-the-factory-floor enhancements and supply chain processes/technology improvements for Navy weapon system acquisition programs such as the Littoral Combat Ship (LCS), CVN 21 carrier program, and others.

## **FY 2007 Plans:**

- Continue all FY 2006 efforts less those noted as completed above.
- Complete the Packaging Reconfigurable Antenna Solutions for Improved Mission Adaptability for the LCS effort.
- Initiate efforts to continue to improve the Navy industrial base through above-the-factory-floor enhancements and supply chain processes/technologies improvements for Navy weapon system acquisition programs such as DD(X), CVN 21, LCS, Virginia Class submarines, and others.

## **FY 2008 Plans:**

- Continue all FY 2007 efforts less those noted as completed above.
- Initiate efforts to continue to improve the Navy industrial base through above-the-factory-floor enhancements and supply chain processes/technology improvements for Navy weapon system acquisition programs such as the DDG-1000 (formerly DD(X)), CVN 21, LCS, Virginia Class submarines, and others.

BUDGET ACTIVITY: 07

PROGRAM ELEMENT: 0708011N

PROJECT NUMBER: 9999

PROGRAM ELEMENT TITLE: INDUSTRIAL PREPAREDNESS

PROJECT TITLE: Congressional Plus-Ups

**CONGRESSIONAL PLUS-UPS:**

	FY 2006	FY 2007
FORMABLE ALIGNED CARBON THERMOSETS (FACTS)/STRETCH BROKEN CARON FIBER	0	2,192

Currently, carbon fibers used in composites for structural applications are in continuous tows. These continuous tows of fiber provide high strength and stiffness but are unable to conform to complex contours, which prevents them from being used in certain applications. Previous efforts in the FACTS/Stretch Broken Carbon Fiber projects have developed methodologies to manufacture tows where the fibers are randomly discontinuous, allowing the fiber tow to maintain its mechanical properties but conform to complex shapes. This effort will be to scale up the process to make preimpregnated tape with these tows, and using this tape to make contoured demonstration articles for naval aircraft applications.

	FY 2006	FY 2007
POLYETHERIMIDE RESIN FOAM DOMESTIC MANUFACTURING CAPABILITY	0	996

Currently, "Airex" polyetherimide (PEI) foam is used as a structural core material in a variety of radome applications for platforms such as DDG-1000 (formerly DD(X)) and F/A-18 due to its unique combination of mechanical and RF properties. There is only one worldwide manufacturer of this foam (Alcan), a Swiss company that has announced it will stop manufacturing the foam for environmental reasons. There is no alternate supplier of this foam, and switching to other foam cores would result in costly part redesigns and/or reduction in radome performance. This project is intended to develop a domestic manufacturing capability for an environmentally friendly version of PEI foam for use as a drop-in replacement for these naval applications.

	FY 2006	FY 2007
US NAVY NUCLEAR POWER PLANT AND SHIP PROPULSION SHAFT MANUFACTURING IMPROVEMENT	0	1,345

This effort concentrates on improving the manufacturing and lowering the cost of production for nuclear power plant components and shafts for Navy submarines/aircraft carriers and for shafts for Navy surface combatants.

	FY 2006	FY 2007
NANO-IMPRINT AT MANUFACTURING SCALE (NIMS)	1,341	1,445

FY 2006 - This effort concentrated on the module level development for subsystems needed for direct manufacturing of micro-electronic integrated circuits. Emphasis was placed on evolving year - 1 alpha concept designs into beta prototypes for testing and processing data collection.

FY 2007 - This effort supports NIMS research.

	FY 2006	FY 2007
NAVAL APPLICATION OF LASER PEENING TECHNOLOGY	959	0

This effort supported evaluation of the implementation potential for Navy aircraft of the laser peening process to enhance fatigue life, fatigue strength, resistance to stress corrosion cracking on aircraft and rotorcraft components, reduce aircraft maintenance costs and improve damage tolerance.
