OPERATIONAL ENVIRONMENT FOR THE SUPPLY (T-AOE 6)
CLASS FAST COMBAT SUPPORT SHIPS

Ref: (a) OPNAVINST C3501.2K
(b) NTRP 1-03.5

Encl: (1) Projected Operational Environment (POE) for the
(T-AOE 6) Class Fast Combat Support Ship
(2) Required Operational Capabilities (ROC) for the
(T-AOE 6) Class Fast Combat Support Ship

1. Purpose. To issue the required operational capabilities (ROC) and the projected operational environment (POE) for the Supply (T-AOE 6) Class Fast Combat Support Ship.

2. Cancellation. OPNAVINST 3501.243A.

3. Discussion. Enclosures (1) and (2), provide the necessary details to describe the mission areas and operational capabilities for which the Supply (T-AOE 6) Class Fast Combat Support Ship was designed and organized as required by reference (a). This instruction provides resourcing agencies with the information they need concerning T-AOE 6 Class mission requirements, capabilities and the types and locations of expected operations. Together, the ROC and POE establish tasking which produces a measurable workload used to compute manpower requirements. Enclosure (2) should be utilized in determining ROCs within each primary and secondary mission area. Primary mission area readiness ratings (M-Ratings) should be reported utilizing the Defense Readiness Reporting System-Navy (DRRS-N) in accordance with reference (b).

4. Action. Fleet Commanders shall periodically review enclosures (1) and (2), and recommend changes to Director, Strategic Mobility and Combat Logistics (N42) when capabilities of the Supply (T-AOE 6) Class Fast Combatant Stores Ship are significantly altered.

OPNAVINST 3501.243B

5. Records Management. Records created as a result of this instruction, regardless of media and format, shall be managed per Secretary of the Navy Manual 5210.1 of January 2012.

A handwritten signature in black ink, appearing to read "P. H. Cullom". The signature is fluid and cursive, with a large initial "P" and a long horizontal stroke at the end.

PROJECTED OPERATIONAL ENVIRONMENT (POE)
FOR
T-AOE 6 CLASS FAST COMBAT SUPPORT SHIPS

1. The Supply (T-AOE 6) Class Fast Combat Support ship's mission is to operate logistically in a high-density multi-threat environment as a member of a carrier strike group (CSG), surface action group (SAG), or amphibious ready group (ARG).
2. The most demanding operating environment anticipated for the T-AOE 6 is operations at sea in wartime in cooperation with designated joint/allied forces, including operations involving land and sea-based aviation.
3. Peacetime forward operations in littoral areas are equally demanding. These operations are frequently characterized by confined and congested water and air space occupied by friends, adversaries, and neutrals - making identification and coordination profoundly difficult. In this environment, adversaries can concentrate and layer their defenses. In an era when some third world countries possess sophisticated weaponry, surprise attack by submarines, coastal missiles, mines, sea-skimming cruise missiles, and theater ballistic missiles must be anticipated. In the myriad variations of this littoral conflict environment, a substantial percentage of operations will be prosecuted in joint/allied scenarios.
4. The ship is capable of performing all assigned primary mission areas simultaneously while maintaining readiness condition I, III, (wartime/forward deployment cruising readiness), R (replenishment readiness), IV (peacetime training steaming), or V (in port).
5. The ship is capable of operating for periods normally not to exceed 32 hours per week, providing ammunition, provisions, stores, fleet freight, mail, personnel and other items and fuel (Naval Distillate Fuel (NATO Symbol: F-76) or jet propellant (JP5)) from a combination of nine underway replenishment (UNREP) stations simultaneously: five fueling at sea (FAS) stations (two starboard and three port) and six replenishment at sea (RAS) stations (three starboard and three port) or seven RAS/FAS stations and one Vertical Replenishment (VERTREP) station. The maximum number of stations in operation for ammunition and cargo transfer is two stations on one side and one station on the opposite side. For fuel transfer, the ship can operate two of three fuel stations to port (double probe) and two of two fuel stations to starboard (single probe). The selection of stations

will be based on the customer requirements and capabilities. Connected Replenishment (CONREP) hours are considered to commence with "first line over" and terminate with "last line clear." All other workload such as rigging, pre-staging cargo, safety briefings, etc., will be counted under utility tasks and evolutions (UT&E).

6. During VERTREP, the ship will provide ammunition, provisions, stores, fleet freight, mail personnel and other items using assigned helicopters or helicopters from another unit. All workload such as pre-staging cargo, safety briefings, etc., will be counted under utility tasks and evolutions (UT&E).

7. During UNREP operations, the rigs will not be sent to two ships at the same time. Rigs will be sent to the second ship after commencement of fuel and/or cargo transfer to the first ship; fuel and cargo rigs normally are sent simultaneously to all ships except Aircraft Carriers (CVNs), Amphibious Assault Ships (LHD, LHA) or ships with unique station configurations. Fuel rigs will normally be rigged first, followed by cargo rigs, for CVNs, etc., during ship replenishment.

REQUIRED OPERATIONAL CAPABILITIES (ROC)
FOR
T-AOE 6 CLASS FAST COMBAT SUPPORT SHIPS

1. The T-AOE 6 Class Fast Combat Support ship's mission is to operate logistically in a high-density multi-threat environment as an integral member of a CSG, SAG, ARG or independently as required. Accordingly, the following primary and secondary warfare mission areas are assigned:

T-AOE-6												
ASW	CCC	EW	FSO	INT	IO	LOG	MIW	MOB	MOS	NCO	STS	SUW
S	P	S	S	S	S	P	S	P	S	S	S	S

2. ROCs are reported under readiness conditions having major significance in determining the unit's total manpower requirements. The following summarizes conditions:

a. Condition I: Battle Readiness. While in Condition I (Battle Readiness), the ship shall be capable of meeting the following criteria: ability to keep all installed systems manned and operating for maximum effectiveness; required to accomplish only minimal maintenance - that routinely associated with watch standing and urgent repairs. For the T-AOE 6, this condition means the CSG assets will provide self-defense and the T-AOE 6 continues to complete RAS evolutions. The maximum expected continuous crew endurance for Condition I is 12 hours per day for mission performance.

b. Condition III: Wartime/Increased Tension/Forward Deployed Cruising Readiness. While in Condition III, the ship shall be capable of meeting the following criteria: ability to keep installed systems manned and operating as necessary to conform with prescribed ROCs; ability to accomplish all normal maintenance, support and administrative functions. For the T-AOE 6, this condition includes preparations for and securing of equipment after replenishment operations. To determine manpower requirements, the minimum expected crew endurance for Condition III is 60 days with opportunity for eight hours of rest provided per man per day.

c. Condition R: Replenishment Readiness. Capable of providing ammunition, provisions, stores, fleet freight, mail, personnel and other items and fuel (Naval Distillate Fuel (NATO Symbol: F-76) or (JP-5)) from a combination of nine of eleven UNREP stations simultaneously: five Fueling At Sea (FAS)

stations (two starboard and three port) and six RAS stations (three starboard and three port) or seven RAS/FAS stations and one VERTREP station. The maximum number of stations in operation for ammunition and cargo transfer is two stations on one side and one station on the opposite side. For fuel transfer, the ship can operate two of three fuel stations to port (double probe) and two of two fuel stations to starboard (single probe). The selection of stations will be based on the customer requirements and capabilities. Conduct VERTREP in support of operating forces to provide ammunition, provisions, stores, fleet freight, mail, personnel and other items utilizing assigned helicopters or helicopters from another unit.

d. Condition IV: Peacetime Cruising Readiness. While in Condition IV, the ship shall be capable of meeting the following criteria: ability to keep installed systems manned and operating only to the extent necessary for safe and effective ship control, propulsion and security; ability to accomplish all normal underway maintenance, support and administrative functions. Maximum advantage is taken of training opportunities. Expected endurance is not constrained by personnel. Ability to immediately change readiness posture to Condition I or III is expected.

e. Condition V: Inport Readiness. Designated maintenance and training period. While in Condition V, the ship shall be capable of meeting the following criteria: ability to keep installed systems manned and operating to the extent necessary for effective operation as dictated by the existing situation; ability to man watch stations as required to provide adequate security; ability at all times to meet anticipated inport emergencies and to perform inport functions as prescribed by unit ROCs; ability to accomplish all required maintenance, support, and administration functions. Maximum advantage is taken for training opportunities. Subject to the foregoing requirements, the crew will be provided maximum opportunity for rest, leave, and liberty.

3. ROC symbols are used to specify the desired level of achievement of readiness or other work for or during a particular readiness condition. Readiness normally applies to watches and/or evolutions, while other work refers to non-watch activity such as performing maintenance or running the galley.

a. CAPABILITIES

(1) "F"="Full." The capability is to be fully achieved. For operational functions (watches), this means that installed equipment or systems will be fully manned to design capability. For support functions, sufficient manning is provided to ensure effective accomplishment of all included tasks. The achievement is to be sustained for the duration of the condition unless modified by an "A" or "E."

(2) "L"="Limited." The capability is to be only partially realized. (Note: "P" for "Partial" is no longer a symbol). Even though only limited capability is realized, it is to be sustained for the duration of the condition unless modified by an "A" or "F." Every "L" must be supported by a limiting statement, specifying the limitation.

b. MODIFIERS

(1) "A"="Augmentation." The capability is to be either fully or partially achieved for a limited time during the condition. The capability is achieved by using off-watch or off-duty personnel to achieve the required degree of capability. This symbol is always associated with an "F" or "L" and establishes a requirement for personnel to be trained, available and on call to augment existing watch stations as required.

(2) "E"="Special Team." The capability is to be either fully or partially achieved for a limited time during the condition. The capability is achieved by using off-watch special teams or details. This symbol is always associated with an "F" or "L" and denotes a capability that does not require continuous watch manning. Teams and details as set may either supplement or replace all or part of the existing watch organization. Man overboard and replenishment details are two examples.

MODIFIER	CAPABILITY	
	FULL	LIMITED
None	Manned to design capacity for duration of condition	Manned to less than design capacity for duration of condition
A	Temporarily manned to design capacity using off-watch personnel	Temporarily manned to less than design capacity using off-watch personnel
E	Temporarily manned to design capacity using a special team	Temporarily manned to less than design capacity using a special team

4. Ship's Company and External Personnel Resources. Normally, using an "A" or an "E" requires no embellishing statement as their meanings are predefined. However, in the case of the T-AOE as well as other classes that routinely embark external resources, the meaning may not be clear as to whether the augmentation should be provided by ship's company or an external resource.

a. This ROC/POE instruction shows:

(1) If the resource is ship's company, no elaboration or statement is provided.

(2) If the resource is external for "F," a note is added to the ROC stating the resource.

(3) If the resource is external for "L," the resource is added to the capability limiting statement.
