## MILITARY CONSTRUCTION, NAVY

For acquisition, construction, installation, and equipment of temporary or permanent public works, naval installations, facilities, and real property for the Navy as currently authorized by law, including personnel in the Naval Facilities Engineering Command and other personal services necessary for the purposes of this appropriation, [\$896,869,000] \$753,422,000 to remain available until September 30, [2004] 2005. Provided, that of this amount, not to exceed [\$72,298,000] \$63,335,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor.

DEPARTMENT OF THE NAVY  
FY 2001 BIENNIAL MILITARY CONSTRUCTION PROGRAM

SPECIAL PROGRAM CONSIDERATIONS

POLLUTION ABATEMENT:

The military construction projects in this program will be designed to meet environmental standards. The Military construction projects proposed are primarily for the abatement of existing pollution problems at Naval and Marine Corps installations and have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria.

ENERGY CONSERVATION:

The military construction projects proposed in this program will be designed for minimum energy consumption.

FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION:

Proposed land acquisition, disposals, and installation construction projects have been planned to allow the proper management of floodplains and the protection of wetlands by avoiding long and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss or degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Numbers 11988 and 11990.

DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL:

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

PRESERVATION OF HISTORICAL SITES AND STRUCTURES:

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object or setting listed in the National Register of Historic Places, except as noted on the DD Form 1391.

PLANNING IN THE NATIONAL CAPITAL REGION:

Projects located in the National Capital Region are submitted to the National Capital Planning Commission for budgetary review and comment as part of the commission's annual review of the Future Years Defense Program (FYDP). Construction projects within the District of Columbia, with the exception of the Bolling/Anacostia area, are submitted to the Commission for approval prior to the start of construction.

ENVIRONMENTAL PROTECTION:

In accordance with Section 102(2)(c) of the National Environmental Policy Act of 1969 (Public Law 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the military construction program.

### ECONOMIC ANALYSIS:

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources. Where alternatives could be evaluated, a primary economic analysis was prepared.

### CONSTRUCTION CRITERIA MANUAL:

Project designs conform to Part II of Military Handbook 1190, "Facility Planning and Design Guide."

### CONGRESSIONAL REPORT REQUIREMENTS:

#### a. Headquarters, Commander-in-Chief, Pacific Fleet

- The HASC recommended deferral of this project. The committee noted the authority recommended in section 2802 of this Act to further the development of Ford Island, Hawaii, for the support of the military activities of the Department of the Navy and other military activities of the Department of Defense. The committee directed the Secretary of the Navy to study the viability of the relocation of the headquarters, Commander-in-Chief, Pacific Fleet, to Ford Island and to assess the adequacy of those authorities provided in section 2802 of this Act to support the development of appropriate headquarters facilities on Ford Island. The committee further directed the Secretary to complete the study and assessment, as part of the master plan for the development of Ford Island, Hawaii, required by that section.
- The CASC authorized the funding of \$15,870,000 for this project..
- (HAC) The Committee originally denied \$15,870,000 for this project. The Committee recommendation is based on authority recommended in section 2802 of the National Defense Authorization Act for fiscal year 2000 to further the development of Ford Island, Hawaii. The Secretary of the Navy is directed to report to the Committee by January 15, 2000 on the feasibility of using authorities granted for the development of Ford Island in relocating the CINCPACFLT headquarters to that site.

#### b. Development of Ford Island, Hawaii (SASC Sec. 2862) (HASC Sec 2802)

- The CASC authorized a provision that authorizes a series of special authorities for the development of Ford Island, Hawaii, by the Secretary of the Navy. The authorities authorize the Secretary to convey or lease excess real or personal property in the State of Hawaii for the purpose of facilitating such development and authorize the Secretary to accept a lease of any facility constructed under this authority in lieu of cash payment for the sale or lease of real property under this authority. This provision requires the Secretary of the Navy to submit a master plan for the development of Ford

Island to the appropriate committees of Congress 30 days prior to exercising any of the authorities provided by this section. The provision also requires the Secretary, 30 days prior to the commencement of any lease, sale, or exchange of real property, to submit to the Congressional defense committees a report detailing the terms and conditions of any transaction. This section prohibits the Secretary from acquiring, constructing, or improving military family housing or unaccompanied personnel housing under this authority in lieu of the authority provided by subchapter IV, chapter 169 of title 10, United States Code. The provision authorizes the Secretary to transfer funds from the Ford Island Improvement Account to the Department of Defense Family Housing Improvement Fund and the Department of Defense Military Unaccompanied Housing fund for such purposes. The CASC language limits the property the Secretary may lease to any public or private sector entity to parcels not required for current operations.

c. Unspecified Minor Construction:

- The HASC recommended that, within authorized amounts for unspecified minor construction, the Secretary of the Navy execute the following project: \$950,000 for an Aircraft Parts Staging Facility at Naval Aviation Depot, Jacksonville, Florida.
- The CASC did not have this language, they authorized appropriation in the amount of \$7,342,000 requested in the budget as per Section 2805 of Title 10, United States Code.
- (SAC) Learning Resource Center, NAVSTA, Pascagoula, MS – The Committee directs that not less than \$920,000 of the unspecified minor construction funds be made available to construct this project.
- Apron Modifications, NAS, Whiting Field, FL – The Committee directs that not less than \$600,000 of the unspecified minor construction funds be made available to construct this project.

d. General Reduction:

- (HASC Sec 2204(c)) The total amount authorized to be appropriated is reduced by \$19,300,000, which represents the combination of project savings in military construction resulting from favorable bids, reduced overhead charges, and cancellations due to force structure changes.
- (CASC Sec 2204(c)) The total amount authorized to be appropriated is reduced by \$30,227,000, which represents the combination of project savings in military construction resulting from favorable bids, reduced overhead charges, and cancellations due to force structure changes. It is further reduced by \$3,000,000 based on a re-estimation of inflation. Family Housing amount authorized was reduced by \$4,600,000 due to reestimation of inflation (\$1,000,000 for Family Housing Construction and \$3,600,000 for Family Housing Support).

- (HAC) – The Committee believes the amount requested for construction contingencies (5% for new construction and 10% for alterations or additions) is excessive. The Committee has learned that contingency funds have been inappropriately used to upgrade projects that already met the basic requirement. Therefore, the Committee has included provision (Sec128) and eliminated contingency funds in the amount of \$131,177,000.
  - (SAC) The Committee believes the amount requested for construction contingencies (5% for new construction and 10% for alterations or additions) is excessive. The Committee has learned that contingency funds have been inappropriately used to upgrade projects that already met the basic requirement. Therefore, the Committee has included provision (Sec125) and eliminated the contingency funds in the amount of \$278,051,000.
  - (CAC) - The conferees agree that the amount requested for construction contingencies, 5 percent for new construction and 10 percent for alterations or additions, is excessive. Therefore, the conferees have included general reductions that reduce the funding available for contingency within the Department. The conferees direct that no project for which funds were previously appropriated, or for which funds are appropriated in this bill, may be canceled as a result of the reductions included in the conference agreement.
- e. Re-estimation of Inflation - (CAC) The conference agreement includes reductions totaling \$25,900,000 which result from re-estimation of inflation undertaken by the Office of Management and Budget as part of the mid-session review of the budget request. The conferees direct the Department to distribute these reductions proportionally against each project and activity in each account.
- f. Acquisition of Prepositioned Equipment Maintenance Facilities, Blount Island, Jacksonville, Florida
- The HASC noted the recent approval by the Secretary of Defense of a waiver of the current moratorium on land acquisition for the purchase of the afloat prepositioning maintenance facilities at Blount Island, Jacksonville, Florida, currently operated under lease by the Marine Corps. The committee noted that these facilities are critical to the prepositioning support of the Marine Corps. The committee has noted previously that ownership of these facilities could save the Department of the Navy between six and seven million dollars annually. In an effort to ensure the continued readiness of the Marine Corps, the need for strategic placement of prepositioning facilities, and the desire to obtain the most cost-effective solution to prepositioning operations, the committee strongly urged the Secretary of the Navy to proceed with those actions necessary to bring this acquisition to completion at the earliest possible time.
  - The CASC noted the recent approval by the Secretary of Defense of a waiver of the current moratorium on land acquisition for the purchase of the afloat prepositioning maintenance facility at Blount Island, Jacksonville, Florida currently operated under lease by the Marine Corps. The CASC acknowledged that these facilities are critical to the prepositioning support of the Marine Corps and further noted that ownership of these facilities would save the Department of the Navy

between six and seven million dollars annually. In an effort to ensure continued readiness of the Marine Corps, the need for strategic placement of prepositioning facilities, and the desire to obtain the most cost-effective solution to prepositioning operations, the CASC expects the Secretary of the Navy to proceed with those actions necessary to bring this acquisition to completion at the earliest possible time.

- (SAC) The Committee noted that the Secretary of Defense has approved a waiver of the moratorium on land acquisition for the purchase of the facilities at Blount Island. The Committee encourages the Secretary of the Navy to proceed with the acquisition of these facilities at the earliest possible date.
- g. Correction in Authorized Use of Funds, Marine Corps Combat Development Command, Quantico, Virginia.
- The CASC noted that the sanitary landfill at the Marine Corps Combat Development Command, Quantico, Virginia authorized by the Military Construction Authorization Act for Fiscal Year 1997 (Division B of Public Law 104-201) is no longer required. The conferees agreed to extend the funds for the sanitary landfill and direct the Secretary of the Navy to submit a report detailing the need for the infrastructure improvements project with the fiscal year 2001 budget request.
  - (CAC) Mission growth at Quantico over the past decade has put an enormous amount of stress on the basic infrastructure there. In fact, past efforts to program the construction of new facilities at the installation have failed due to the lack of basic infrastructure. The conferees are aware of plans to provide utilities and road structures at Quantico to correct current facility deficiencies. The project will also open approximately 500-800 acres for future development. The conferees agree this project is needed for continued growth and development of the base. Therefore, the Navy is directed to accelerate the design of this project and include the required funding in its fiscal year 2001 budget request.
- h. Radio Transmitting Facility Towers at Naval Station, Annapolis, Maryland  
The CASC authorized a provision that directs the Secretary of the Navy to delay for one year the demolition of radio transmission towers at Naval Station, Annapolis, Maryland, and authorize the conveyance of the towers, in an 'as is' condition, to the State of Maryland or Anne Arundel County, Maryland, if either agrees to accept the towers.
- i. Child Development Centers – (HAC) The Committee recognizes the increased importance of child development centers and encourages the Department to maintain all efforts possible to meet 80 percent of the child care need.
- j. Privatization of Utility Systems – (HAC) The Committee is concerned that sale of utility systems may result in a substantial increase in long-term utility costs to the Government and a concomitant

increase in O&M requirements. It urges the Department to study carefully the economic consequences of privatization before divesting the Government's interest in any military utility system. Additionally, the Committee encourages the Department to assure the military services are coordinating their utility privatization efforts in co-located areas.

k. European Construction –

- (HAC) The United States European Command is faced with a \$4.7 billion backlog in maintenance and repair. This lack of funding and the numerous deployments and contingency operations over the past few years has put an enormous amount of stress on the infrastructure in the region. Through the inclusion of \$475,000,000 in the 1999 Emergency Supplemental Appropriations Act, the Congress has recognized the severe need for facility upgrades in the European theatre. The Department is directed to appropriately budget to correct these deficiencies. Page 385 is in response to the Committee requirement contained on page 10 of the HAC report.
- (CAC) The conference agreement does not provide funding for European military construction projects. The conferees direct the Department to use funds that were appropriated in the Fiscal Year 1999 Emergency Supplemental Appropriations Act (Public Law 106-31) to provide full funding for these projects.

l. Metric Conversion – (HAC) The Committee directs the Comptroller of the Department of Defense to assure that any Form 1390/1391, which is presented as justification in metric measurement, shall include parenthetically the English measurement. The metric and equivalent English measurements are provided in Block 11 of each DD1391.

m. Concord Naval Weapons Station, California – (HAC) The significant downsizing planned at the station has raised the issue of potential use of the property by the surrounding community. The Committee directs the Secretary of the Navy to conduct a joint-use study examining the potential for joint use by civilians and military entities that is consistent with missions of the Navy and Army and the needs of the surrounding community. The study shall be conducted by the Navy in conjunction with the Army; the cities of Concord, Martinez, and Pittsburg; Contra Costa County; the Communities of Clyde and Bay Point; and the East Bay Regional Parks District. The report is to be submitted to the Committee no later than January 15, 2000.

n. Lemoore Naval Air Station, California: Quality of Life Conditions – (HAC) The Committee has been informed that a recent survey at Lemoore confirmed that the living conditions diminish morale and may threaten pilot retention rates. Considering the cost of training these pilots, as well as the critical importance of the F/A-18's to the Navy's future, the Navy is directed to accelerate the design of quality of life projects at Lemoore NAS, and to include the required construction funding in its fiscal year 2001 budget request. Additionally, the Secretary of the Navy is directed to report to the Committee by January 15, 2000 on the plan and schedule for addressing the critical quality of life conditions at Lemoore NAS. Page 49 is in response to the Committee requirement contained on page 14 of the HAC report.

o. Design

- (HAC) Port Hueneme, California: Combat Systems Integration Lab –The Navy is directed to accelerate design of the Combat System Integration Lab at the Port Hueneme Division of the Naval Surface Warfare Center, and to include funding for this project in its fiscal year 2001 budget request. Page 83 is in response to the Committee requirement contained on page 15 of the HAC report.
  - Earle Naval Weapons Station, New Jersey: Pier 2 –The Committee has learned that structural testing and engineering analyses of the pier have found major areas of deterioration. Accordingly, the Committee has concerns about the safety of conducting operations at Pier 2. Therefore, the Navy is directed to accelerate the design of this project and to include the required construction funding in its fiscal year 2001 budget request.
  - (SAC) Naval Submarine Base, Bangor, WA – In the Senate report accompanying the fiscal year 1999 Military Construction Appropriation Bill, the Department was directed to make \$1 million available from the “DoD dependent school” account for the design of a facility to serve the Bangor installation and to award a contract for the planning and design as early as practical in fiscal year 1999. Despite this language, the Department has not proceeded with this contract. The funds remain available, and the Committee directs the Navy and the Department of Defense to proceed immediately with the design, planning, and site preparation activities associated with this facility.
- p. School Facilities Study – (SAC) The Committee is concerned about the adequacy of special education services available to the dependent children of uniformed personnel, particularly on those installations identified as compassionate assignment posts. Accordingly, the Committee has included a provision (Sec 126) which directs the Secretary to provide a report, by April 30, 2000, detailing the following: (1) a survey of schools on military installations in the U.S. that are operated by either the DoD or local school districts; (2) a survey of school districts in the continental U.S. that have experienced an increase in enrollment of 20% or more in the past five years resulting from base realignments or consolidations; and (3) an assessment of the impact of increased special education requirements on school districts in areas designated by the military departments as compassionate assignment posts. The Committee further directs the Secretary to assess the adequacy of special education services and to recommend corrective measures such as the renovation of existing schools or construction of new schools, a cost estimate of needed improvements, and a recommended source of funding within the Department of Defense.
- q. Roosevelt Roads Naval Station, Puerto Rico – (HAC) The Committee is concerned that the land dispute with the City of Ceiba has not been resolved. The Committee is aware that the City of Ceiba has developed several cooperative use proposals and would like to reach an agreement with the Navy on a mutually beneficial plan for this land. The Secretary of the Navy is directed to report to the Committee by January 15, 2000 on a schedule for developing a plan agreeable to both the Navy and the City of Ceiba to resolve this land dispute.

r. Naval Reserve Unspecified Minor Construction –

- (HAC) The Committee directs the Naval Reserve to execute a project in the amount of \$720,000 to provide a fire training facility at the Fort Worth Joint Reserve Base in Texas. [Note: P-018, Fire Fighting Training Facility, NAS Fort Worth]
- (SAC) Ground Support Equipment Holding Shed, NAS, Willow Grove, PA – The Committee directs that not less than \$640,000 of the unspecified minor construction funds within the Naval Reserve account be made available to construct this project. [Note: This project was also added to the MCNR major construction program.]
- (SAC) Water Storage Tank, NAS, Memphis, TN – The Committee directs that not less than \$1,050,000 of the unspecified minor construction funds within the Naval Reserve account be made available to construct this project. [Note: this is not a valid MCNR project. It needs to be funded from active Navy funding]

s. Reporting Threshold for General and Flag Quarters -

- (HAC) Furthermore, not more than \$15,000 per unit can be spend annually for the maintenance and repair of any general or flag officer quarters without the prior notification of the appropriate committees of Congress. [Note: This is a decrease from the current threshold of \$25,000.]
- (SAC) Naval Flag Officer Quarters – The Committee understands that the Navy has spent a total of \$5,500,000 from the “ Operation and Maintenance, Navy” appropriation to maintain, repair, and preserve three flag officer quarters from fiscal years 1992 through 1999. In addition, “Family Housing, Navy” appropriation funding was used to supplement these major renovation initiatives. The use of the Operation and Maintenance appropriation for family housing renovations is considered inappropriate, and the Navy’s designation of senior flag officers’ quarters as representational, appeared to be an attempt to circumvent the Congressional control regarding the limits on expenditures on flag and general officers’ quarters. Further, the Navy has systematically failed to notify the Congress that these renovations and other family housing improvements were planned and ongoing and that some of these projects exceeded cost variation guidelines. Accordingly, the Committee has included a new provision (Sec 124) which requires congressional notification of any expenditure of \$25,000 or more for repair and maintenance of flag and general officers’ quarters.
- (CAC) The conferees were dismayed to learn the Air Force, in addition to the Navy, has in recent years supplemented family housing funds with regular operations and maintenance funds on general and flag officer quarters. Therefore, the conferees have no recourse but to include a general provision (Section 128) which statutorily prohibits the mixing of operations and maintenance and family housing funds on all family housing units, including general officer quarters.
- The conferees will continue the existing notification requirement to the appropriate committees of Congress when maintenance and repair costs will exceed \$25,000, instead of \$15,000 as proposed by the House, for a unit not requested in the budget justification. However, beginning January 15,

2000, the Under Secretary of Defense (Comptroller) is to report on an annual basis all operations and maintenance expenditures for each individual flag and general officer quarters.

- t. General and Flag Officer Quarters: Change in Occupancy Work – (HAC) The Committee continues the notification requirement when maintenance and repair costs for change in occupancy work for a unit will exceed the amount submitted in the budget justification by 25 percent or \$5,000, whichever is less.
  
- u. Housing Privatization – (HAC) In view of the sluggish implementation of the Privatization Initiative to date, the Committee believes abandonment of traditional family housing construction is an inappropriate strategy for the military services to pursue. Further, the Committee is concerned that Office of Management and Budget scoring requirements are driving privatization transactions rather than good business practices. The Committee is also concerned that the Department is permitting the military services, in an apparent breach of fiduciary responsibility, to give away valuable Federal land and facilities without adequate consideration in order to facilitate privatization deals with developers. The Committee believes a “pilot project” approach is the best method to warrant success for each of the military services and urges the Department to reflect this approach in future budget requests.
  
- v. Family Housing Master Plans - (HAC) Section 129 of the bill directs that the Army, Navy, Marine Corps and Air Force to submit to the appropriate committees of Congress by June 1, 2000, a Family Housing Master Plan demonstrating how they plan to meet the Department’s goal to eliminate all inadequate housing by 2010 with traditional construction, demolition, operation and maintenance support, as well as privatization initiative proposals. The Committee commends the Air Force for recently completing its two year effort which involved installation visits to document the existing conditions of base housing units, initially assess the feasibility of housing privatization and to produce an installation plan. The Army, Navy and Marine Corps are directed to mirror the Air Force’s efforts.
  
- w. Hunters Point Naval Shipyard, California – (HAC) The Committee believes that the necessary funding to achieve the environmental cleanup goals should be allocated by the Navy to coincide with the implementation of the City’s land re-use and redevelopment plans. The Committee directs the Secretary of the Navy to report to the Committee no later than January 15, 2000 on the progress being made to complete the timely transfer and redevelopment of Hunters Point Naval Shipyard.

- x. Louisville Naval Ordnance Station, Kentucky - (HAC) Due to continued discussion between the State of Kentucky Department of Natural Resources and the Department of the Navy over the extent of the cleanup for external environmental remediation, the property has not been conveyed to the Louisville/Jefferson County Redevelopment Authority (LJCRA). The Committee directed the Navy to immediately begin Economic Development Conveyance (EDC) negotiations with the LJCRA. The Committee believes the EDC should provide an early transfer of the land and facilities, at no cost, to the LJCRA. The conveyance should be subject to the following conditions: the Navy will continue to address the cost of groundwater remediation and continue to be responsible for, and defend and indemnify the LJCRA against, any and all environmental concerns created by the Navy, as specified under the current lease, state, and federal regulations; and the LJCRA will assume responsibility for all remaining necessary repairs, code violations, and infrastructure modifications unrelated to environmental investigations or remediation at the Station. The Secretary of the Navy is directed to report to the Committee no later than September 15, 1999, on the status of negotiations and the estimated date for the early conveyance of the Station.
- y. Dallas Naval Air Station, Texas – (HAC) The Dallas Naval Air Station was slated for closure by the 1993 Base Realignment and Closure Commission. The Secretary of the Navy is directed to report to the Committee by January 15, 2000 on the current status of ongoing efforts with emphasis on the following activities: building demolition, building fireproofing, and drinking water remediation. This report is to include the estimated dates for completion of all remediation activities.
- z. Real Property Maintenance Reporting – (SAC) The Committee recommends a continuation of the current guidelines for repairing a facility. Components of the facility may be repaired by replacement, and such replacements may be up to current standards or code. Interior arrangements and restorations may be included as repairs but additions, new facilities, and functional conversions must be performed as military construction projects. Such projects may be done concurrent with repair projects, as long as the final project is a complete and usable facility. The appropriate Service Secretary shall submit a 21-day notification prior to carrying out any repair project with an estimated cost in excess of \$10 million.
- aa. Service Academy Military Construction Master Plan - (CAC) The conferees direct the Under Secretary of Defense (Comptroller) and the Under Secretary of Defense (Acquisition and Technology) to conduct a joint review of the Service Academies' military construction, family housing, and operations and maintenance requirements in this or any other Act. This review is to be completed in conjunction with the services and result in the development of a Service Academy Master Plan. Accordingly, the conferees direct the Secretary of Defense to submit the plan to the congressional defense committees no later than March 1, 2000. Any future requirements at an Academy must be included in the Master Plan. Furthermore, after the Service Academy Master Plan is submitted, any emergent requirements not included in the plan will require notification of the congressional defense committees.
- bb. BRAC Construction Projects: Administrative Provision - (CAC) The conferees agree that any transfer of funds which exceeds reprogramming thresholds for any construction project financed by

any Base Realignment and Closure Account shall be subject to a 21-day notification to the Committees, and shall not be subject to reprogramming procedure.

- cc. BRAC Construction Budget Data - (CAC) The conferees are concerned about the accuracy and reliability of the base realignment and closure (BRAC) construction budget data provided annually to the Congress. The Office of the Department of Defense Inspector General and the General Accounting Office recently found that the Services submitted BRAC military construction data in the fiscal years 1997 through 1999 military construction budgets based on overstated requirements and unsupported specifications and costs. They also found that the major commands of the Services did not effectively implement management control procedures established for the BRAC military construction planning, programming and budgeting process. This has resulted in overstated and invalid BRAC requirements and lack of supporting documentation. The conferees direct the Department to take the necessary corrective action to ensure that these deficiencies are corrected in the fiscal year 2001 budget submission.

10. Description of Proposed Construction							
<p>Modification of eight earth covered, reinforced concrete magazines (1,712 m2) to provide new larger motorized blast door and new headwall; waterproofing and insulation; power and environmental control systems; a new mechanical room; and, extension of the electrical distribution system with new overhead power lines to the modified magazines.</p>							
11. Requirement: <u>  0LS  </u> Adequate: <u>  0LS  </u> Substandard: <u>  0LS  </u>							
PROJECT:							
<p>Modifications to existing missile magazines and extension of the electrical distribution system for the storage of TRIDENT I (C4) missile magazines. (New mission)</p>							
REQUIREMENT:							
<p>Adequately sized and appropriately sited facilities are required to provide safe, environmentally controlled storage of TRIDENT I (C4) missile motors in support of the TRIDENT II (D5) Pacific Fleet deployment schedule at the Strategic Weapons Facility, Pacific (SWFPAC). The current schedule requires initial TRIDENT II (D5) weapons system capability in FY2002. The phased conversion of existing TRIDENT I (C4) facilities and missile magazines at SWFPAC is planned to commence in FY2000. To ensure that suitable storage facilities are available for the displaced TRIDENT (C4)</p>							
<i>(Continued On DD 1391C)</i>							

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																
3. Installation and Location/UIC: N69035 NAVY DETACHMENT CAMP NAVAJO, ARIZONA																		
4. Project Title MAGAZINE MODERNIZATION	7. Project Number 114																	
<p>(...continued)</p> <p>assets, 37 magazines at Camp Navajo require modification. The planned phasing of this effort is as follows: Phase I, FY2000 MILCON Project P-113 (19 magazines); Phase II, FY2001 MILCON Project P-114 (8 magazines); and, Phase III, FY2002 MILCON Project P-115 (10 Magazines).</p> <p>CURRENT SITUATION:</p> <p>SWFPAC currently supports the TRIDENT I (C4) weapon system and maintains this operational capability. SWFPAC has adequate storage facilities for this weapon system. However, the Department of Defense directed TRIDENT II D5 backfit program requires SWFPAC to provide proper environmental, safety, and security conditions to meet the transportation, operation and storage requirements of the larger TRIDENT II (D5) missile system. This is a new/expanded mission for the SWFPAC facility.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Strategic Weapons Facility, Pacific will not be able to fulfill its mission as a TRIDENT II missile facility in support of the Pacific Fleet deployment schedule, nor will it have sufficient TRIDENT I(C4) missile storage capability.</p>

10. Description of Proposed Construction					
<p>Concrete combat aircraft loading apron, taxiways, ordnance crew building, ordnance staging area, connecting roadways, utilities, fencing, and communications systems. Loading apron and taxiways will be a concrete slab over compacted sub base course with aircraft tiedowns and grounding grid with contact points, perimeter taxiway lights, painted deck markings, aircraft and personnel signs, concrete entrance and exit ways with taxiway lighting and shoulder stabilization on the CALA and taxiways. Ordnance crew building will be two-stories with a concrete slab, exterior masonry walls, observation windows, metal roof, interior sheet rock walls, air conditioning, fluorescent lighting, bathroom facilities, paved parking area, and storage. Ordnance Staging Area will be a paved area, a concrete pad, and a steel shade. Utilities will extend water, electrical and telephone service to the newly relocated ordnance area, will be sized to accommodate utility ducts under entrance, exit, and exit ways, and will include fire hydrants for the ordnance operations building and vehicle pad. Demolition of two structures and utilities.</p>

<p>(...continued)</p> <p>11. Requirement: <u>92,710 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT:</p> <p>Construct a Combat Aircraft Loading Apron (CALA), taxiways, an ordnance crew building, roadways, and an ordnance staging area at MCAS Yuma, AZ.</p> <p>Combat Aircraft Loading Apron = 92,710 m2 = 997,922 Square Feet  Combat Aircraft Loading Apron &amp; Taxiways = 90,880 m2 = 978,224 Square Feet  Crew Building = 214 m2 = 2,303 Square Feet  Staging Area = 1,616 m2 = 17,394 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Provide an efficient, safe, and adequately sized aircraft ordnance loading and unloading operations area that conforms to all ordnance handling, storage and flightline regulations.</p> <p>CURRENT SITUATION:</p> <p>With 250,000 sorties annually, MCAS Yuma manages the highest flight operations tempo in the Marine Corps. MCAS Yuma hosts numerous units annually for live ordnance and tactical flight training. In 1997 alone, 410 aircraft and 10,240 personnel in 42 rotational units spent an average of two weeks at MCAS Yuma to participate in major training evolutions such as the Weapons Training Instructor (WTI) course. In addition to its hosting mission, MCAS Yuma is also the home-port of four AV-8B Harrier squadrons. During the six week long WTI courses, Yuma's permanent and transient units must share extremely limited hangar, flightline, and ordnance loading space. These high density operations force MCAS Yuma to use the small existing Combat Aircraft Loading Apron (CALA) for overflow parking and to alternatively load live ordnance on the flightline under Chief of Naval Operations (CNO) waiver. The existing CALA does not have adequate tiedowns and grounding points to efficiently load and unload ordnance, is too small to park large aircraft, and is located far from new ordnance storage magazines that will be built as a result of a FY 2000 land acquisition purchase. This additional acreage, added to MCAS Yuma's southern boundary was justified on the basis of eliminating waivers associated with current insufficient and unsafe ordnance storage and handling operations. Once the new CALA is built, ordnance loading will not have to be performed on the flightline, and the old CALA will continue to be used as overflow parking during major training evolutions.</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																										
3. Installation and Location/UIC: M62974 MARINE CORPS AIR STATION YUMA, ARIZONA																												
4. Project Title COMBAT AIRCRAFT LOADING APRON (CALA)	7. Project Number 482																											
<p>(...continued)</p> <p>IMPACT IF NOT PROVIDED:</p> <p>MCAS Yuma will have to continue to load and unload ordnance along the flightline under waiver (with the associated Explosive Safety Quantity Distance (ESQD) arcs extending into inhabited buildings) and the existing CALA will continue to be used for overflow parking putting valuable aviation assets at risk.</p>

10. Description of Proposed Construction

Infantry Squad Battle Course with two range control towers, an operations/storage building, an ammunition breakdown building, two general instruction buildings, two field restrooms, two bleacher enclosures, emplacement of stationary and moving infantry targets, emplacement of hostile fire simulators, and trenches with wood retaining walls and bunker. Project includes underground cabling for remoted target system (RETS) installation, target system wiring, lightning protection, electrical power and necessary utilities, controlled environments in buildings, telephone cabling, transformer, public address system, paving and site improvements (including site preparation, safety berms, Arizona

4. Project Title INFANTRY SQUAD BATTLE COURSE	7. Project Number 633	
<p>(...continued)</p> <p>crossing for existing creek and erosion protection, concrete sidewalks), night training lights at initial position fire line, and security lighting and signs for range lateral limits.</p>		
<p>11. Requirement: <u>427 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT:</p> <p>Constructs an Infantry Squad Battle Course for MCB Camp Pendleton, CA.</p> <p>Infantry Squad Battle Course = 427 m2 = 4,596 Square Feet  Range Control Tower = 48 m2 = 517 Square Feet  Operations Storage Building = 74 m2 = 797 Square Feet  Ammunications Breakdown Building = 11 m2 = 118 Square Feet  General Instruction Building (2) = 148 m2 = 1,593 Square Feet  Head with Aerated Vault = 44 m2 = 474 Square Feet  Bleacher Enclosure (2) = 102 m2 = 1,098 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Replace antiquated range with a state-of-the-art range that provides automated feedback and scoring to accommodate new weapons and training requirements employed by the Marine Corps. The range is required for infantry squad offensive training, basic marksmanship training, familiarization with various weapons and maintenance of proficiency in field firing techniques.</p> <p>CURRENT SITUATION:</p> <p>Currently, there is no existing range at MCB Camp Pendleton capable of supporting the required training provided on an Infantry Squad Battle Course. Per a 1989 report called the Land Training Area Requirements Study (LATAR), Pendleton rates 52 small arms ranges in order to effectively train Marines per Individual Marine Training Standards. With 46 existing ranges, of which only 28 are considered adequate, Pendleton needs upgrade or construction of 24 additional ranges. The existing 1950's vintage ranges are old, deteriorated, antiquated, and do not provide automated feedback or scoring. Too small in size, and outfitted with hard-wire pop-up target systems, most of the existing ranges are incapable of supporting the new, more powerful weapons in the Marine Corps inventory or of accommodating the moving targets of the standard modern training devices now used called Remoted Target Systems (RETS). A modern Infantry Squad Battle Course with RETS equipment and automated scoring feedback is needed for offensive fire and maneuver training, basic</p>

<p>(...continued)</p> <p>marksmanship training, familiarization with various weapons, and to maintain proficiency in field firing techniques for entry level Marines who are being trained in their primary infantry MOS. Since no such range currently exists at Camp Pendleton, entry level Marines receive formal instruction on new weapons and techniques, but they can only partially and largely ineffectively simulate live-fire combat drills on the old ranges using stationary targets that provide no feedback or scoring to the student or instructor.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>MCB Camp Pendleton units will continue to train on the inadequate local ranges which will erode their live-fire proficiency and ultimately affect their readiness to perform effectively in combat.</p>

10. Description of Proposed Construction				
<p>Armor/Anti-Armor Tracking Range to include underground cabling for remoted target system (RETS) installation, upgrade control tower/equipment with environmental control, operations/storage facility, head facilities, stationary and moving tank targets, site preparation, tracking and access roads, drainage, lighting, electrical and utilities, telephone, and removal/demolition of existing range structures.</p>				
11. Requirement: <u>292 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>				
PROJECT:				
Construct an Armor/Anti-Armor Tracking Range for Marines training at MCB Camp Pendleton, CA.				
Armor/Anti-Armor Tracking Range = 292 m2 = 3,143 Square Feet				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M00681 MARINE CORPS BASE CAMP PENDLETON CALIFORNIA		
4. Project Title ARMOR/ANTI-ARMOR TRACKING RANGE	7. Project Number 634	
<p>(...continued)</p> <p>Control Tower Upgrade = 24 m2 = 258 Square Feet  Relocate Control Tower &amp; Supply/Maint. Bldg = 172 m2 = 1,851 Square Feet  Operations/Storage Building = 74 m2 = 797 Square Feet  Field Head with aerated Vault = 22 m2 = 237 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Replace antiquated ranges and provide state-of-the-art RETS (Remoted Target System) range for the armor and anti-armor tracking weapons systems employed by the Marine Corps (including the Dragon, TOW, AT-4 shoulder launched anti-armor weapon, M2 .50 caliber machine gun, 25mm gun, and 120mm tank cannon). The range is required to train Marines in the techniques of engaging armored vehicle type targets with medium and heavy anti-armor weapons, for field tracking excercises, and for qualification excercises with tracking and launching trainers.</p> <p>CURRENT SITUATION:</p> <p>Currently, MCB Camp Pendleton has only 4 of 16 ranges upgraded to current standards for live fire training with the Remoted Target System (RETS). Specifically, Armor/Anti-armor live fire training is conducted on a deteriorating 1950's vintage range located at the northeast corner of Camp Pendleton. The range has only 3 moving targets (vice the 15 required), can handle only platoon sized formations (vice the required company-sized formations), and provides very primitive feedback to users (vice the sophisticated feedback a full RETS will provide). Training scenarios are extremely limited for the two Light Armored Vehicle (LAV) battalions and LAV school, the battalion of Assault Amphibious Vehicles (AAVs) and AAV school, the two reserve Tank Companies stationed at Camp Pendleton, and the 1st Tank Battalion from 29 Palms, CA who currently use the range. Additionally, the current range is oriented within 1 kilometer of the base boundary and often must be closed during the June-October fire season because of dangers to the off-base community posed from fires started in the impact area. The upgraded range would reorient the range to impact live rounds more than 2 km from the base boundary, thus reducing base liability and increasing community confidence in the safety of Camp Pendleton ranges.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The old range will continue to be used with its low pop-up target density, limited feedback, small unit size capability, lack of capability to handle</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M00681 MARINE CORPS BASE CAMP PENDLETON CALIFORNIA		
4. Project Title ARMOR/ANTI-ARMOR TRACKING RANGE	7. Project Number 634	
<p>(...continued)</p> <p>new armor/anti-armor weapons systems, and frequent check fires for fire protection to the local community. This will adversely affect live fire and anti-armor tracking proficiency and ultimately affect readiness because Marines will not be fully trained or prepared to perform their mission in combat.</p>

3. Installation and Location/UIC: M67865 MARINE CORPS AIR STATION MIRAMAR, CALIFORNIA																		
4. Project Title GROUND COMBAT TRAINING RANGE	7. Project Number 050																	
<p>(...continued)</p> <p>the unsafe proximity of new aircraft flight patterns over the impact berm, environmental and deterioration problems, and safety zones which extended outside the air station boundaries and over the explosive overhaul route. Currently, Miramar Marines must travel 5 hours round trip to MCB Camp Pendleton to conduct their annual week-long rifle qualification training. Marines must also travel similar distances to MCAS El Toro for their annual pistol qualifications. The use of these distant ranges places a severe constraint on MCAS Miramar units to effectively conduct aircraft flight and maintenance operations because large numbers of personnel are missing from the units at any given time 46 weeks of the year. Range availability to Miramar Marines will severely degrade by the end of 1999 when the Camp Pendleton rifle range closes for the construction on that site of a Helicopter Outlying Landing Field (HOLF) and the MCAS El Toro pistol range shuts down due to base closure actions. Miramar units will then have to compete with local MCB Camp Pendleton units for use of the remaining rifle ranges on the base and have little recourse for pistol qualifications.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>MCAS Miramar Marines' combat readiness and live-fire proficiency, as well as the aircraft readiness of the air station, will continue to be seriously degraded by the loss of manpower associated with the transport of Marines to the distant MCB Camp Pendleton 46 weeks per year for rifle and pistol marksmanship training.</p>

10. Description of Proposed Construction				
<p>Conversion of spaces within an existing building to construct a Clean Room with prefabricated insulated walls, floor and ceiling panels, air conditioning, heating, humidity and particulate control systems, entry air shower, restrooms, change area, fire protection system, mechanical and electrical utilities, site improvements, demolition of existing overhead electrical bus ducts and rails for hoists; abatement of asbestos and lead paint.</p>				
11. Requirement: <u>790 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>				
PROJECT:				
Converts existing space at Naval Aviation Depot (NADEP) North Island to a Clean Room for hydraulic component repair.				
Component Repair Clean Room Facility = 790 m2 = 8,503 Square Feet (Current mission)				
REQUIREMENT:				
Adequate and properly configured Classified Controlled Environment Facility is required to meet guidelines for repairing aircraft components in an environmentally controlled facility.				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N65888 NAVAL AVIATION DEPOT NORTH ISLAND, CALIFORNIA		
4. Project Title COMPONENT REPAIR CLEAN ROOM FACILITY	7. Project Number 728	
<p>(...continued)</p> <p>CURRENT SITUATION:</p> <p>The existing components are not processed in a Classified Controlled Environment. There are twelve (12) separate areas that are used to process components. Only two (2) areas have any form of temperature control, and the areas do not meet any of the requirements for a Classified Controlled Environment. The remaining areas are general shop areas that have no temperature control.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Components requiring processing in a Classified Controlled Environment will continue to be processed in facilities that do not meet the requirements. Without the required temperature, humidity, and especially particulate control, components risk being contaminated during the repair process. Contamination can cause failure resulting in a potential for failure during flight, and ultimately loss of life and aircraft.</p>

10. Description of Proposed Construction					
<p>Construct a two story Aircraft Operations Building, a seven story Control Tower with observation deck, and a one story Radar Traffic Control Center, (RATCC). Buildings will have steel frame, concrete walls, concrete foundation and floor, concrete topping over metal deck for structural roof systems. Aircraft Operations Building will house the administration of flight operational activities with supporting functions including, but not limited to airfield management, flight support, flight planning, flight scheduling, communications, weather services, and all supporting functions. RATCC includes Instrument Flight Rules (IFR) Control Room, equipment rack storage for communications terminal equipment, ground electronics maintenance shop and storage, training room, ready room, office space, unrestricted power source (UPS), emergency generator, and all supporting functions (storage, bathrooms, showers, etc.). Construction of supporting facilities includes electrical and mechanical utilities, paving, site improvements and demolition of five existing air operations facilities.</p>

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00246 NAVAL AIR LANDING FIELD SAN CLEMENTE ISLAND, CA		
4. Project Title AIRCRAFT OPERATIONS BLDG (SAN CLEMENTE)	7. Project Number 577	
<p>(...continued)</p> <p>11. Requirement: <u>1,740 M2</u>                      Adequate: <u>0 M2</u>                      Substandard: <u>0 M2</u></p> <p>PROJECT:</p> <p>Constructs an Aircraft Operations Building, Control Tower, Radar Air Traffic Control Center facility at the Naval Auxiliary Landing Field (NALF), San Clemente Island.</p> <p>Aircraft Operations Building = 1,740 m2 = 18,729 Square Feet  Building = 776 m2 = 8,353 Square Feet  Control Tower = 366 m2 = 3,939 Square Feet  Radar Traffic Center = 598 m2 = 6,437 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and efficiently configured Air Operations Building, Control Tower, and RATCC facility are required to replace the existing deteriorated, corroded and undersized temporary airfield facilities with new construction in order to provide adequate facilities to support installation of new air traffic control (ATC) systems. Replacement of the existing, deteriorated, inadequate Control Tower with a properly sited facility is required in order to provide visibility for the entire runway and apron, and also eliminate an Airfield Safety Waiver. In addition, replacement of the existing undersized, temporary, deteriorated metal facility housing Air Operations is required to provide adequate space for flight control (flight support, flight planning, flight scheduling, air operations administration), communications and weather services.</p> <p>CURRENT SITUATION:</p> <p>Air Traffic Control (ATC) is comprised of three 8 foot by 40 foot trailers - self contained/powerd with environmental and grounding systems which are out-of-date, lack current safety precautions and are not reliable. There is a lack of adequate space to allow installation of additional and future ATC equipment and systems.</p> <p>The Control Tower is in poor condition and suffers from excessive deterioration and corrosion throughout. The metal structure has deteriorated due to the harsh marine environment at NALF San Clemente Island. Additionally, the location of the existing Control Tower is 62 feet within the Primary Surface (1,500 feet wide air field safety surface level within and centered on the runway centerline) of the airfield. Airfield Safety Waiver SC-2 permits the Tower to obstruct the Primary</p>

4. Project Title BERTHING WHARF (INCREMENT II)	7. Project Number 700B	
<p>(...continued)</p> <p>power distribution system, a new double-ended substation, pier fire alarm, utility control system, lighting and communications (fiber optics lines for telephones, television, local area networks), and electrical utilities; site improvements include security fence, relocation of ferry landing, access roads, parking area restoration, landscaping, and sitework; demolition of existing Pier J/K; dredging of 190,400 m<sup>3</sup> (249,034 cubic yards) and disposal of dredge spoils; environmental mitigation (water column replacement, eelgrass, kelp, terns, herons and pelicans); and, technical operating manuals.</p>		
<p>11. Requirement:    <u>13,681 M2</u>                      Adequate:    <u>0 M2</u>                      Substandard:    <u>0 M2</u></p> <p>PROJECT:</p> <p>Provides berthing for a nuclear carrier (CVN) in the berthing basin at Naval Air Station (NAS) North Island.</p> <p>Berthing Wharf = 13,681 m<sup>2</sup> = 147,261 Square Feet  Wharf = 10,874 m<sup>2</sup> = 117,047 Square Feet  Integrated Logistics Overhaul Building = 2,110 m<sup>2</sup> = 22,712 Square Feet  Equipment Laydown Building = 465 m<sup>2</sup> = 5,005 Square Feet  Portal Crane System = 232 m<sup>2</sup> = 2,497 Square Feet (New mission)</p> <p>REQUIREMENT:</p> <p>Adequate berthing structures are required to accommodate deep draft CVNs, including operational storage space and necessary utilities and mooring hardware. Three CVN berths are required at North Island; two berths to accommodate homeported CVNs and a third berth to support transient CVNs. The transient berth already exists, and one berth for a homeported CVN is currently under construction. This project provides berthing for a second homeported CVN.</p> <p>CURRENT SITUATION:</p> <p>Berth L-M is the only NAS North Island berth available for use by a nuclear-powered warship. Currently, this berth supports transient CVNs and other visiting Navy ships. This berth provides direct land access from the ship berth to an airfield for essential air wing logistics support, including aircraft onloads and offloads. In addition, PACNORWEST CVNs conduct their operational training in the Southern California Fleet Operating Areas. The only carrier accessible airfield is at NAS North Island. Therefore, this berth must be retained primarily for use as a transient berth to provide essential logistics support to PACNORWEST CVNs.</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																														
3. Installation and Location/UIC: N00246 NAVAL AIR STATION NORTH ISLAND, SAN DIEGO, CA																																
4. Project Title BERTHING WHARF (INCREMENT II)	7. Project Number 700B																															
<p>(...continued)</p> <p>In addition, Berth L-M is not intended or designed to support the level of depot maintenance that must be accomplished at the new CVN homeporting/maintenance wharfs.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>NAS North Island will not be able to provide a homeport/maintenance berth for additional homeported CVNs and still maintain transient CVN support capability for PACNORWEST CVNs. Three CVNs, which conduct operational training in the Southern California (SOCAL) Fleet Operating Areas, are scheduled to be homeported in the PACNORWEST. Without this project, a transient berth will not be available to provide logistics support for PACNORWEST CVNs; this would severely impact the Pacific Fleet's ability to provide maintenance support for PACNORWEST CVNs operating and training in the SOCAL area.</p>

3. Installation and Location/UIC: N68936 NAVAL AIR WARFARE CENTER, WEAPONS DIV POINT MUGU, CALIFORNIA		
4. Project Title RANGE OPERATIONS CENTER ADDITION/ALTS	7. Project Number 031	
<p>(...continued)</p> <p>Feet  Building Addition = 2,763 m2 = 29,741 Square Feet  Building Alterations = 10,022 m2 = 107,876 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate range operations facilities are required to safely and efficiently support the current mission of the Sea Range. The Range Operations Center (ROC) needs to be expanded and the existing buildings need to be renovated and remodeled. The new addition to the existing Range Operations Center will accommodate some of the major operational functions necessary to support the ROC's mission. The existing structures will be modified and upgraded to correct architectural and engineering problems.</p> <p>CURRENT SITUATION:</p> <p>The existing facility was originally constructed to accommodate the equipment designs that existed in the 1940s and 1950s. Modern equipment is designed and built with a different architectural concept. Range systems are continually upgraded and expanded to keep pace with the testing needs of modern weapons. The existing facility has severe quality of life problems associated with handicapped access and restroom facilities. Because of a lack of sufficient and appropriate space in the building, some engineering work, operations planning efforts, and parts of the maintenance efforts have been accomplished in trailers located adjacent to the complex. Range customers have no space to prepare for an operation or discuss last minute details and have to rent operational spaces to meet these needs. Because of the need to be near their stations, range operators cannot leave the building to attend pre and post-operation discussions.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Continued impact on operational efficiencies and workplace quality of life. Due to lack of adequate space in the existing range operations building; all operational planning and engineering, and portions of the maintenance requirement will continue to be housed in separate trailers. Also, due to lack of space in the existing building to conduct pre- and post-operation discussions, range operators still will not be able to participate in these critical discussions. Failure to support the implementation of the requirements defined herein will delay the</p>

10. Description of Proposed Construction				
<p>Two story structural steel building with: masonry and precast concrete exterior; built up roof on insulated metal decking; spread-footing concrete foundation on engineered fill; gas fired space and hot water heating; fire protection and alarm systems; security vaults; elevators; air conditioning to support a large amount of computers and electronic equipment; structural reinforcement for seismic zone four; technical operating manuals (dual language); site utilities; paving and site improvements. Project includes demolition of 16 buildings and termination of a commercial lease.</p>				
11. Requirement: <u>6.730 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>				
PROJECT:				
Project provides a consolidated engineering and computer center for direct, real-time fleet support to trouble shoot and resolve problems detected in fleet weapon/combat systems on ships deployed worldwide.				
(Continued On DD 1391C)				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N63394 PT HUENEME DIV, NAV SURFACE WARFARE CTR PORT HUENEME, CALIFORNIA		
4. Project Title WEAPON/COMBAT SYSTEMS INTEGRATION LAB	7. Project Number 016	
<p>(...continued)</p> <p>Weapon/Combat Systems Integration Lab = 6,730 m2 = 72,441 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Consolidated adequate and properly configured electronic laboratory facilities are required to support integrated work teams that provide real-time fleet support. As the In-Service Engineering Agent, the activity is responsible for total maintenance, testing, and logistic support of combat/weapon systems throughout the systems service life. Support includes integrated testing to verify and validate computer programs that control operational performance and safety of the combat systems before release to the fleet as well as real time problem solving and enhancements during the life of the system. Combat/weapon systems supported include: the newly introduced Integrated Ship Self Defense; Target Acquisition; NATO Evolved Sea Sparrow Missile; Rolling Airframe Missile; Rapid Anti-ship Integrated Defense; Standard Missile; Battle Force Tactical Trainer; and Cooperative Engagement Capability Systems.</p> <p>CURRENT SITUATION:</p> <p>Engineers, technicians and logisticians are working in inadequate and substandard facilities dispersed in multiple locations. Inadequate power systems and limited communications interconnectivity cannot support required team integration. Communication connectivity with the fleet is extremely limited. Computer program testing, trouble shooting and maintenance are inefficiently performed due to space, power, structural and location shortcomings of the existing multiple facilities. Power outages result in lost productivity, and power shortcomings prohibit establishing vital electronic links. These 30 to 50-year old structures do not comply with current building codes and seismic standards, have deteriorated beyond economical repair, and contain many violations of the Americans with Disabilities Act (ADA). Additionally, training is conducted in leased facilities and some combat/weapon system engineering work is being performed in private sector facilities (i.e., contractor facilities). The hardware in these facilities is not always in suitable control configuration to enable Navy independent verification and validation of system fixes and new capabilities to counter evolving global threat to U.S. and allied interests.</p> <p>IMPACT IF NOT PROVIDED:</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																										
3. Installation and Location/UIC: N63394 PT HUENEME DIV, NAV SURFACE WARFARE CTR PORT HUENEME, CALIFORNIA																												
4. Project Title WEAPON/COMBAT SYSTEMS INTEGRATION LAB	7. Project Number 016																											
<p>(...continued)</p> <p>The Integrated Ship Self Defense System, Battle Force Tactical Trainer, and Cooperative Engagement Capability will not be effectively supported. Rapid and accurate assessment of system upgrades and new elements, particularly computer programs, and isolation of the root cause of fleet reported system problems/malfunctions will be hindered. Accessibility, safety and electrical deficiencies in at least 13 buildings will remain uncorrected.</p>

3. Installation and Location/UIC: N00245 NAVAL STATION SAN DIEGO, CALIFORNIA		
4. Project Title BERTHING PIER (INCREMENT I)	7. Project Number 326	
<p>(...continued)</p> <p>11. Requirement: <u>  OLS  </u> Adequate: <u>  OLS  </u> Substandard: <u>  OLS  </u></p> <p>PROJECT: Constructs a new, concrete pier with complete shore utilities support.</p> <p>Pier Structure = 16,731 m<sup>2</sup> = 180,091 Square Feet Fender System = 922 m = 3,025 Linear Feet Dredging - = 211,000 m<sup>3</sup> = 275,978 Cubic Yards (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate berthing is required to support the Naval Station San Diego, which is the Pacific Fleet's homeport for many large deck ships (such as Amphibious Assault - LHA/LHDs) and surface combatant classes including the newest guided missile cruisers and destroyers. These ships are categorized as deep draft/power intensive (DDPI) ships due to the requirement for electrical power to operate the communications suites and other electronic equipment. As of FY 1997, 19 DDPIs and 4 PI ships are assigned to the Naval Station. There are 17 DDPI berths which are in adequate condition. A 67% in-port loading factor is normally assumed to determine the required number of DDPI berths. However, operational tasking historically results in the loss of entire piers for ships repairs and training (single nesting), visiting ships and foreign ships berthing, ship decommissioning (single berth), and repairs/upgrades. The LHA/LHDs are not as power intensive as combatants, and their lengths take over entire piers, thereby eliminating berths that could be used to deliver the necessary power to truly DDPI combatants. This situation further complicates the berthing configuration and makes this project more necessary.</p> <p>CURRENT SITUATION:</p> <p>Existing Piers 10 and 11 are 1940s construction with insufficient power capabilities; are structurally deteriorated beyond economical repair; are structurally unsound; have inadequate utilities; have insufficient space for loading and unloading operations; have insufficient water depth for load out; and in general, are incapable of operationally supporting the Fleet.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Naval Station will be unable to adequately support the waterfront</p>

10. Description of Proposed Construction				
<p>Military Operations on Urban Terrain (MOUT) Training Complex will be constructed of heavy wooden timbers capable of withstanding 80 mph wind gusts, treated for weather protection and preservation. Earth berms with wooden barriers will be provided for safety protection between the various facilities and the two other ranges located in the vicinity of the MOUT. Electrical power and conduit for computer cables will be included. Facilities will include a range control observation tower, an operation/storage building, a field service head with field lines, a covered mess, a vault and fight, a clearing techniques building, a grenadier gunnery, a destiny doorway, a Dodge City, and a shooting house.</p> <p style="text-align: right;"><i>(Continued On DD 1391C)</i></p>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67399 MARINE CORP AIR-GROUND COMBAT CTR TWENTYNINE PALMS, CALIFORNIA		
4. Project Title URBAN ASSAULT COURSE	7. Project Number 542	
<p>(...continued)</p> <p>Buildings will be of one and two story construction with and without stairways and capable of having remotely engaged targets appear in windows, doorways, and rooms. The target storage will be a pre-engineered metal building on a concrete floor slab.</p>		
<p>11. Requirement: <u>568 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT:</p> <p>Constructs a live firing range for urban assault training consisting of the following scenarios: Vault and Fight, Clearing Techniques, Grenadier Gunnery, Destiny Doorway, Dodge City, and an indoor shooting house.</p> <p>Urban Assault Course = 568 m2 = 6,114 Square Feet  Range Control Tower = 24 m2 = 258 Square Feet  Operation/Storage Building = 74 m2 = 797 Square Feet  Field Service Head with Field Lines = 22 m2 = 237 Square Feet  Covered Mess = 71 m2 = 765 Square Feet  Shooting House = 377 m2 = 4,058 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>An adequate live fire range is required for urban assault training at the Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms, CA. The Marine Corps training philosophy revolves around the combined use of simulation and live fire events to prepare Marines for combat operations. Simulation allows Marines to initially learn techniques while saving ammunition. Live fire allows Marines to realize the effects and dangers of various weapons systems in a controlled environment before experiencing them in real combat.</p> <p>CURRENT SITUATION:</p> <p>Annually, over 33,000 Marines train during 10 Combined Arms Exercises (CAX) at the Marine Corps Air Ground Combat Center (MCAGCC) Twentynine Palms, CA in a multitude of live-fire training scenarios. The MCAGCC's large, open expanse allows the Marine Corps to conduct live fire operations up to the battalion and regimental level without endangering anyone. Currently, the MCAGCC has only open-air live fire desert training ranges on the Center and thus cannot conduct live fire indoor or urban warfare training. Although Marine Corps Bases Camp Pendleton, CA and Camp Lejeune, NC, and several Army bases, have urban assault courses (called "Military Operations in Urban Terrain" or "MOUT" facilities), they are simulation facilities that can only be used with blank ammunition and</p>

3. Installation and Location/UIC: M67399 MARINE CORP AIR-GROUND COMBAT CTR TWENTYNINE PALMS, CALIFORNIA																		
4. Project Title URBAN ASSAULT COURSE	7. Project Number 542																	
<p>(...continued)</p> <p>cannot be upgraded to handle live-fire training due to safety fan and material design constraints. Because of their proximity to the local communities, the relatively small size of their home bases, and the fact that these simulation MOUTs were not built to withstand the constant damage that would result from the use of live ammunition, these existing ranges cannot be upgraded for live fire use. Consequently, Twentynine Palms, as the Marine Corps' only live-fire combined arms training center, is the ideal location for a live-fire urban trainer. In the desert, far from encroaching civilian populations, an urban assault course capable of withstanding the destructive impact of real ammunition will meet explosive safety fan and spacial criteria and adequately provide CAX units basic instruction in live-fire urban assault techniques.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Marine units training at MCAGCC Twentynine Palms will not receive required basic training in live-fire urban assault techniques, will have to rely on simulated urban assault training, and will ultimately be less prepared for combat operations in urban environments. Marines participating in annual combined arms exercises (CAXs) at the MCAGCC will be limited to open-air desert environment scenarios.</p>

10. Description of Proposed Construction					
<p>Provides a 676m2 (55m x 12m) finger pier east of Mooring Platform "A" with steel transfer bridge to the existing floating drydock (ARDM-4). Pier construction consists of epoxy coated steel pipe piles with concrete bents and deck with fender system and cathodic protection. Selected demolition at quaywall along with electrical, mechanical, fencing, and cathodic protection upgrades at Pier 15. Miscellaneous fixtures including: bollards, cleats, and additional utility outlets.</p>					
11. Requirement: <u>  </u> OLS Adequate: <u>  </u> OLS Substandard: <u>  </u> OLS					
PROJECT:					
Provides a finger pier for improved access to the existing floating drydock (ARDM-4) to allow more efficient and safe Submarine Selected Restricted Availabilities (SRA) and Submarine Intermediate Maintenance Availabilities (IMA).					
Drydock Support Facility = 676 m2 = 7,276 Square Feet					
Fender System = 123 M = 123 Linear Feet (Current mission)					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00129 NAVAL SUBMARINE BASE NEW LONDON, CONNECTICUT		
4. Project Title DRYDOCK SUPPORT FACILITY	7. Project Number 429	
<p>(...continued)</p> <p>REQUIREMENT:</p> <p>An adequate finger pier is required for improved access to floating drydock ARDM-4 to insure fleet readiness through efficient and safe drydock operations at SUBASE New London. The FY00 decommissioning of the ARDM-4 will shift the operational demands to the remaining drydock. SRA's are expected to increase for the ARDM 4 from four per year, average 45 days each, to five, and from four emergency events per year, average 23 days each, to an average of six per year requiring drydock services. Total days needed to satisfy these requirements, including approximately 16 days to cut and place the support block cradle (1.5 days per docking for eleven dockings), with current ARDM-4 berthing configuration is 379 working days, which exceeds the current capacity of 356 working days per year. ARDM-4 operations must become more efficient to satisfy these requirements.</p> <p>CURRENT SITUATION:</p> <p>Pier 15 currently supports berthing of floating dry-dock ARDM-4 on its north side; the southern side is used for submarine berthing. The unusual configuration of Pier 15, which features a large "cut out" in the north side deck, severely constrains vehicular and pedestrian access to ARDM-4 and provides little more than a 30' wide "catwalk" for work area and staging of equipment and supplies. Due to the tight turning radii required to navigate around the cut out, and the inadequate width of the surrounding deck, direct vehicular access to the ARDM is very limited. Conflicting requirements for access by sludge trucks, pure water trucks, personnel trailers and cranes constantly interfere with effective pier operations for the ARDM as well as for the submarine berths.</p> <p>The only access from Pier 15 to the interior of the drydock is a 12 ft opening with a 5 ft wide pedestrian ramp in the drydock wall. During an SRA, this opening is used for running cables, sludge hoses and water hoses, as well as for movement of equipment and supplies, and for personnel access to and from the dry-dock basin. This congestion results in personnel tripping hazards, limited ability to use forklifts and frequent blocking of the 12 FT fire lane. Any items that cannot be moved through this opening must be hoisted by crane over the top of the 60 ft. bulkhead. Because most trailer trucks cannot back onto the pier, supplies must first be unloaded from delivery trucks by hand or forklift, and transferred to a point on the pier where the drydock crane can lift them</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00129 NAVAL SUBMARINE BASE NEW LONDON, CONNECTICUT		
4. Project Title DRYDOCK SUPPORT FACILITY	7. Project Number 429	
<p>(...continued)</p> <p>over the wall. For any lift exceeding 12 tons, a floating crane must be used. During start-up, an average of 300 drydock crane lifts are made per week by the starboard side crane, which has the only access to the pier. The port crane cannot reach the pier in its current configuration.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If not provided, SUBASE New London will be unable to adequately reduce the duration of SRA's performed by ARDM-4 to allow for the additional SRA without losing the capability to perform six emergency events per year. Estimated annual cost savings of \$544K will not be realized. Safety of Navy personnel and submarine assets will continue to be jeopardized due to the inaccessibility of the pier areas in emergencies. The cost to perform one emergent repair at a local commercial drydock is approximately \$1,100,000. (\$50,000 docking fees and \$350,000 per week times three weeks).</p>		
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 10. Description of Proposed Construction				
<p>Repair and renovate Building 70 at the Washington Navy Yard. Upgrade mechanical and electrical systems to provide a shell for the Navy Museum Annex. Provide gypsum wallboard partitions with insulation, new wall coverings for interior masonry walls, ceiling and insulation, floor slab, new fire safety doors, new doors and windows. Repair existing structure, including roof and clerestory, masonry walls, foundations and steel structure. Meet museum standards for climate control and lighting. Demolish interior partitions and obstructions. Provide site improvements and handicap accessibility. Museum displays and exhibits will be developed with other funds.</p>				
11. Requirement: <u>3,004 m2</u> Adequate: <u>0 m2</u> Substandard: <u>3,004 m2</u>				
PROJECT:				
<p>This project provides permanent Navy Museum exhibit space for scholarly research and public viewing, and expands the Navy Museum to accommodate permanent exhibits from the Cold War era, including the Korean War, Vietnam, and regional conflicts.</p>				
<p>Navy Museum Annex = 3,004 m2 = 32,335 Square Feet (Current mission)</p>				
REQUIREMENT:				
<p>Adequate exhibit facilities are required to meet the needs of the Navy</p>

4. Project Title NAVY MUSEUM ANNEX	7. Project Number 339	
<p>(...continued)</p> <p>Museum and tell the story of the Cold War era. The Naval Historical Center recognizes that the role of the Navy Department in the conduct of the Cold War was extensive and vital to the protection of American interests on the seas and ashore. The conclusion of the Cold War shaped current international relations and altered the mission and composition of the military. For these reasons, the involvement of the Navy in the major conflicts, daily operations, and conclusion of war is studied by policy makers, scholars, and the public. It is also important to officially recognize the sacrifices and contributions of the sailors who served during this dramatic period. Therefore, there is a need to extend the museum's coverage of this era of history to tell the Navy's story and exhibit artifacts of the era.</p> <p>CURRENT SITUATION:</p> <p>The Navy Museum occupies Buildings 76 and 67 in the Navy Yard Historic District. Museum exhibit space is not now available, in existing facilities, to house Cold War exhibits, artifacts and conduct related activities. Building 70 is a contributing element of the Navy Yard historic district and is adjacent to the Navy Museum, the Navy Art Gallery, and the display ship Barry. It currently houses a submarine exhibit and curator storage; however, access to the exhibit space is restricted because the building does not meet life safety codes for public use. Environmental controls are insufficient to safely display and preserve sensitive artifacts. As a result, the building is not routinely open, and exhibits are not available for public view. The Navy Museum is authorized by Secretary of the Navy Instruction 5755.1A to be the official Navy service museum.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this renovated facility the Navy Museum will be unable to completely fulfill its mission of stewardship, mandated by public law, to display and preserve the Navy's heritage for posterity. If this facility is not renovated this important era of our nation's and navy's history will not be readily available for scholars and public display. Artifacts currently in Building 70 will continue to be exposed to an adverse preservation environment.</p>

10. Description of Proposed Construction					
<p>Multi-story, brick-faced, cast stone detailed, masonry bachelor enlisted quarters (BEQ) that matches Georgian style, red-brick architecture of current 8th &amp; I facilities and incorporates special architectural features to include hip-style roof, arcade, and slate shingles. BEQ will include 166 "2x0" configured rooms with semi-private bathrooms and walk-in closets, air-conditioning, fire protection, elevators, all utilities (including CATV cabling/telephones), mechanical equipment, laundry rooms, force protection features (such as building hardening, glass treatment, barriers), recreation areas, supply storage, janitor closets, guest restrooms, and service areas. First floor of BEQ will include supporting physical fitness area, administrative space, and Marine Corps Exchange components (convenience store, uniform shop, tailor/dry cleaner, barber shop), library/computer lounge, post office, technical operating manuals,</p>

4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 990	
<p>(...continued)</p> <p>and paving and site improvements (to include ornate perimeter fencing and generous landscaping for architectural compatibility per National Capital Planning Commission (NCPC) requirements, sidewalks, electric substation and switchgear, water/sewer/storm drain utility tie-ins, flagpole, paving, and site lighting and signage). Parking structure will be a multi-story structure with 273 parking spaces constructed to match the architectural features of the existing 8th &amp; I facilities and will include fire protection, utilities, and force protection features (such as sentry booths and mechanical barriers for the street entrance).</p>		
<p>11. Requirement: <u>786 PN</u> Adequate: <u>239 PN</u> Substandard: <u>0 PN</u></p> <p>PROJECT:</p> <p>Constructs a "2x0" bachelor enlisted quarters with 166 rooms, a Support Area in the BEQ with physical fitness, recreation, and Exchange components, and a parking garage for junior enlisted personnel at Marine Barracks, 8th &amp; I Streets, Washington D.C.</p> <p>Bachelor Enlisted Quarters = 17,848 m2 = 192,114 Square Feet  Building = 7,055 m2 = 75,939 Square Feet  BEQ Support Area = 1,763 m2 = 18,977 Square Feet  Parking Structure = 9,030m2 = 97,198 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and modern bachelor housing with physical fitness, recreation, and Exchange spaces, and a parking garage for junior enlisted Marines assigned to the Marine Barracks at 8th &amp; I. The Marine Barracks at 8th &amp; I is situated on 4.74 acres of land in the urbanized core of southeast Washington DC. There are 12 buildings, including 5 general officer/Commanding Officer family housing quarters, on the Post. Due to site constraints, two major Marine Barracks functions are located off-site at the Washington Navy Yard (Marine Corps Institute non-resident education) and Anacostia (Motor transport). The Marine Barracks consists of over 871 Marines who provide a light infantry battalion for White House and civil disturbance security missions, formal ceremonies (parades, funerals, silent drill team, color guards), nonresident instruction management, and musical support to the President and the Commandant of the Marine Corps. Operations tempo is extremely high. Barracks Marines participate in and support over 3500 commitments annually nationwide. Over 63% of 8th&amp;I Marines are junior enlisted personnel, and 76% of them are bachelors on their first tour.</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M65049 WASHINGTON MARINE BARRACKS, 8TH & I ST WASHINGTON, DC		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 990	
<p>(...continued)</p> <p>CURRENT SITUATION:</p> <p>LAND ACQUISITION: Under a Memorandum of Understanding with the Washington D.C. Housing Authority, the Marine Corps has acquired 7.5 acres of land 2 blocks southwest of the current Marine Barracks. Both sites are part of the urbanized core of Southeast Washington D.C. and are surrounded by a mixture of moderate density residential, light industrial, and retail uses as well as the Washington Navy Yard. As part of the agreement with the D.C. Housing Authority, and in exchange for demolition of the condemned apartment buildings on site, the Marine Corps must construct architecturally enhancing and aesthetic "role model" facilities for economic revitalization of the urban core and also improve existing recreational areas on the new site by FY 2001. Given the Marine Barracks' significant bachelor housing and support facilities deficiencies, the DC Housing Authority's offer was accepted by the Marine Corps.</p> <p>BEQ: While the Marine Barracks has a 646 junior enlisted bachelor housing manspace requirement, the existing 1970's vintage bachelor housing facility has only 274 adequate manspaces. Of these, 26 manspaces are utilized for company administrative areas due to serious admin space deficiencies on the Post. The existing BEQ space, which is undergoing extensive renovation, is also diminished by the requirement to provide locker space for the ceremonial uniforms of the 647 Barracks Marines who must commute to work. The over 250 single junior enlisted Marines who cannot be housed on the Post, plus half the population of the existing BEQ due to renovation displacement, are currently living off-base either in the Anacostia Navy or Henderson Hall Marine BEQs or on the economy receiving Basic Allowances for Housing (BAH). Those that live in area BEQs do so on temporary lease arrangements with the host units (both leases expire in Oct 2000) and live in a "foster-care" environment. For those young Marines who must rent or buy homes, quality of life is seriously degraded because, to find affordable housing, they must commute 20-100 miles round trip daily and then struggle when they get to work to find legal parking. None of the young Marines living off-Post experience the unit connectivity or benefit from the supervision provided in a parent-unit BEQ living environment. These off-base living conditions seriously compromise the readiness, rapid response capability, team bonds, and logistics efficiencies vital to the successful conduct of the Marine Barracks' mission.</p> <p>SUPPORT AREA: Because their missions are always high visibility events, Barracks Marines must pay extraordinary attention to their military appearance and physical fitness and require exceptional flexibility in</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M65049 WASHINGTON MARINE BARRACKS, 8TH & I ST WASHINGTON, DC		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 990	
<p><i>(...continued)</i></p> <p>logistical support. These Marines work long and varied hours with commitments that often require arriving at work before 0400 and departing after midnight. Barracks Marines, who support 1 to 5 events daily and change their uniforms 2 to 3 times a day, often with only 30 minutes between commitments, require immediate access to fitness areas and Exchange services (including barber shop, uniform shop, drycleaning, convenience store, and post office). Traveling to other local bases for basic exchange services cannot be accomplished within the limited time available. With the addition of over 250 Marines living on site, the need to enhance current services and to satisfy long-term deficiencies is even more critical to maintaining the high standards of readiness required of Barracks Marines. Currently, the Marine Barracks' 1975-vintage gymnasium, weight room, aerobic room, and support areas, at 11,119 square feet, provide less than half the indoor fitness area required (24,500 ft<sup>2</sup>) and have, over the years, become extremely crowded and inadequate. Consequently, many Barracks Marines choose to risk running outside through the inner city streets of Washington DC rather than to endure the cramped conditions of the indoor facilities. The existing BEQ currently has an Exchange Complex and a dining facility. However, with the construction of the new BEQ, the dining facility will have to be expanded to feed the additional 259 Marines. This expansion will extend into the spaces currently occupied by the Exchange and will require relocation of the Exchange Complex to the new BEQ.</p> <p>PARKING: With a parking requirement of 574 spaces, the Barracks only has enough parking for about half the Marines who need it. Current available parking consists of a 215 space parking garage on-Post, 8 spaces in the General Officer's garages, 33 on-Post staff / visitor spaces, 53 leased spaces underneath the I-295 freeway (lease expires in FY 2000 due to construction), and approximately 38 first-come/first-serve spaces aboard the Washington Navy Yard. For the remaining approximately 300 Marines who cannot get any of the above spaces, finding parking every day is a monumental challenge. Because the National Capitol Planning Commission (NCPC) stipulates a one to three parking ratio for the National Capitol Region to decrease automobile density and promote use of mass-transit in the District, available parking in Washington DC is at a premium. Thus, to park legally in Southeast DC, Barracks Marines must park 4-5 blocks away from the Post. Given their early and late working hours, these Marines are constantly exposed to personal danger and to burglary of their vehicles. Thus, many Marines choose to risk parking illegally near the Post and to pay hundreds and often thousands of dollars in parking fines. Also, because of their unusual working hours, these junior Marines must generally own their own vehicles and cannot rely on the subway, buses, or</p>

4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 990																							
<p>(...continued)</p> <p>car-pooling to eliminate their parking problems. Finally, a parking garage is required because of force protection criteria, space constraints, and NCPC requirements.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Junior enlisted single Marines will continue to live off-base on the expensive economy and to commute long distances from affordable housing. Marines will also continue to have great difficulty finding parking in the dense urban area surrounding the current Marine Barracks site and expose themselves to danger and damage to their vehicles from parking far away or continue to incur large fines from parking illegally close to the Barracks. These situations will adversely affect Marines' abilities to effectively respond to their high visibility commitments, impair their quality of life by adding arduous living conditions to an already complex and challenging work schedule, and degrade the readiness of the Marine Barracks to perform its mission.</p>

10. Description of Proposed Construction

Three-story, concrete frame building, with pile foundation, floating (vibration free) concrete floor, pre-cast walls, elevator, strict temperature and humidity controls, air conditioners, central deionized water distribution, central liquid nitrogen distribution, laboratory utilities, elevated walkway to existing lab building 207. Built-in equipment includes clean room, laboratory equipment, electromagnetic shielding, laboratory hoods/scrubbers, raised access flooring, slab vibration isolation, magnetic isolation, and emergency power systems. Special foundation features include piles. Technical operating manuals. Demolition of six buildings.

3. Installation and Location/UIC: N00173 NAVAL RESEARCH LABORATORY, WASHINGTON, DISTRICT OF COLUMBIA		
4. Project Title NANO-SCIENCE RESEARCH LABORATORY	7. Project Number 050	
<p>(...continued)</p> <p>11. Requirement: <u>3,083 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u></p> <p>PROJECT:</p> <p>Constructs a laboratory facility, with state-of-the-art clean rooms, to permit the Navy to conduct basic and exploratory research and advanced development of materials and devices in the nanometer scale (nanoscience is the emerging field of man-made materials synthesized and fabricated at the atomic and molecular levels) and technology.</p> <p>Atomically Engineered Materials Facility = 3,083 m2 = 33,185 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>The Office of the Director of Defense Research and Engineering (DDR&amp;E) has specifically requested timely construction of a nanoscience facility at the Naval Research Laboratory (NRL). DoD has made nanoscience one of the six Strategic Research Objectives in the DoD Basic Research Plan. The Office of Management and Budget and the President's Office of Science and Technology have recommended doubling nanoscience funding in the FY2001 budget.</p> <p>Adequate and properly configured laboratory facilities are required to conduct basic and exploratory research, and advanced technology development for materials synthesis, processing, integration and analysis at the atomic and molecular levels. This facility will enable the development of man-made materials with future fleet readiness applications for all Naval systems and platforms. Unprecedented potential technology advancements to meet tomorrow's Naval requirements are available in nanometric electronics, superconductivity, low observables (i.e. stealth), biomolecular engineering, magneto electronics, high performance sensors, high strength/low weight structural materials, and electromagnetic propulsion systems.</p> <p>Significant applications to the Fleets include: high frequency (wide bandwidth) communications for fire control, computers, electronic warfare jammers and communications that utilize one common antenna array; enhanced array detectors for guidance systems for Tomahawk missiles and other smart munitions; miniaturized sensors and actuators for reduced ship manning for damage control; low power personal communication devices; and materials for power electronic components including superconducting and magnetic materials for high efficiency propulsion systems for surface and</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00173 NAVAL RESEARCH LABORATORY, WASHINGTON, DISTRICT OF COLUMBIA		
4. Project Title NANO-SCIENCE RESEARCH LABORATORY	7. Project Number 050	
<p>(...continued)</p> <p>subsurface units.</p> <p>This facility is the Navy's only laboratory for this type of work. NRL is the best possible location for this facility because of its superior, qualified labor pool. There is no larger single concentration of scientists and engineers in the United States working on nanoscience than is found at NRL. The NRL research effort is pushing the state of the art. Accessible facilities in academic and/or commercial sectors are not state of the art. There are only a few state of the art facilities like the proposed facility in existence in the country. In the commercial sector they are fully utilized for development and production operations and not on research, synthesis, processing, and characterization of novel nano structured materials and devices. NRL teams with academic scientists; NRL has 14 active Cooperative Research and Development Agreements with academia and industry in nanoscience. All are based on NRL developed Navy patents. NRL has licensed 9 Navy patents related to nanoscience research to industry since 1992, and has submitted 19 Navy patents in the last year resulting from nanoscience research. Private industry cannot be relied upon for this research, because it is too expensive for private industry to make initial advances.</p> <p>CURRENT SITUATION:</p> <p>The existing facilities, constructed between 1923 and 1945, are inadequate to support the current generation of research, due to vibration, electromagnetic and acoustic noise, inadequate utilities, and lack of high grade clean rooms. The existing facilities cannot be adapted to accommodate the vibration isolation, and clean room requirements necessary to adequately support research at the atomic and molecular levels.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Department of the Navy warfighting strategy is predicated on the continued rapid advancement of electronics and sensor technology. This advancement cannot continue unless fundamental impediments at the atomic and nanometer scale are resolved. This project is critically needed to solve those issues. Current electronic technology cannot meet the Navy's need and can not be extrapolated to the nanometer scale which is required in order to meet the need. Vibration, electromagnetic noise and particulate contamination currently negatively impact the ability to develop nanometer scale materials with future fleet readiness applications, particularly improved command, control, and communications for all Naval systems and platforms.</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00173 NAVAL RESEARCH LABORATORY, WASHINGTON, DISTRICT OF COLUMBIA		
4. Project Title NANO-SCIENCE RESEARCH LABORATORY	7. Project Number 050	
<p>(...continued)</p> <p>Lack of this facility increasingly hinders or prevents the development of applications that would be of benefit to the Fleets, including: high frequency (wide bandwidth) communications for fire control, computers, electronic warfare jammers and communications that utilize one common antenna array, enhanced array detectors for guidance systems for Tomahawk missiles and other smart munitions, miniaturized sensors and actuators for reduced ship manning for damage control, low power personal communication devices, and materials for high efficiency propulsion systems for surface and subsurface units. Especially at risk is the attempt to transition the following existing efforts to the fleet in the near term (within approximately five years): missile guidance components, navigation sensors, chemical and biological sensors, radiation hardened memory, nanoelectric components, optical memory and light emitting polymers for flat panel displays. Also at risk is the attempt to transition the following existing efforts to the fleet, in the intermediate term (approximately five to ten years): surveillance, electronic warfare, and munitions delivery with autonomous decision making capability, improved turbine components, and optical computers. Materials loss due to corrosion/erosion/wear is a major expense for the Navy, estimated at one billion dollars per year. Inability to work at nanoscale prevents potential solutions to this problem. Advances in magnetoelectronics will provide a quantum jump in Naval information acquisition, processing and recording within the next two decades. NRL research leads this scientific area, but further progress is dependent upon the ability to manipulate individual atoms and clusters into the required relationships for maximum performance of the materials. The present inadequate facilities inhibit the ability to perform the necessary atomic manipulation and therefore severely limit the progress in this critical area. Advances in molecular biology will be revolutionary in the next twenty years, in large part because nanoscience enables the measurement and manipulation of single molecules. NRL is attempting to exploit this revolution to develop new technologies for casualty care and personnel monitors. Progress has been very slow, with inadequate facilities as the major cause.</p>

10. Description of Proposed Construction

Dredge the existing wharf area over a length of 91.5 meters, from a present depth of 5.2 meters to 9.1 meters, and build two 15.2 meter concrete breasting platforms to accommodate the USNS HAYES. Install 440V/1200 amp shore power. Construct a masonry concrete warehouse to accommodate cables, electronics, arrays, and auxiliary equipment. Construct a concrete building for holding hazardous material and hazardous waste associated with ship operations. Repair sheet-piling seawall to hold back the fill material from the dredging, reclaiming approximately 1.5 acres (.61 hectares) of land.

11. Requirement: OLS Adequate: OLS Substandard: OLS

PROJECT:

The project provides permanent berthing for the USNS Hayes and consolidates personnel into a single location at the Naval Surface Warfare Center (NSWC), Carderock Division, South Florida Testing Facility (SFTF)

*(Continued On DD 1391C)*

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62701 NAVAL SURFACE WARFARE CENTER DETACHMENT FORT LAUDERDALE, FLORIDA		
4. Project Title SEAWALL AND SHIP BERTHING FACILITY	7. Project Number 893	
<p>(...continued) in Fort Lauderdale, Florida.</p> <p>Sheet Steel Pile Seawall = 61 MB = 200 Feet Dredging = 32,000 M3 = 303,444 Cubic Yards General Purpose Warehouse = 650 m2 = 6,997 Square Feet Hazmat/Hazwaste Facility = 111 m2 = 1,195 Square Feet (Current mission)</p> <p><b>REQUIREMENT:</b></p> <p>Adequate wharf and operational support facilities are required to accommodate the USNS HAYES and associated project equipment and materials as part of the new South Florida Ocean Measurement Center to allow relocation of the USNS HAYES from Cape Canaveral to Ft. Lauderdale and closure of the Cape Canaveral facility.</p> <p>The USNS HAYES is a 250 ft. modified twin-hull vessel operated by Military Sealift Command for the Navy. The ship has been extensively quieted for special operations and to handle a number of large, one-of-a kind systems associated with maintaining the stealth of our submarine fleet. The programs supported by HAYES are ongoing, with most work taking place in the Bahamas area. The ship has a large instrumented laboratory used to support these missions. The laboratory is operated and maintained by fifteen Navy civil servant engineers and technicians.</p> <p>There are several clear advantages associated with consolidating NSWCCD's Ft. Lauderdale and Cape Canaveral sites (i.e. MILCON). Money savings accrue by eliminating the cost of renting pier, office, laboratory, and warehouse spaces. Fuel is saved by the shortened transit to the Bahamas area. Additional savings are realized by eliminating the fuel, labor, and generator maintenance associated with self-generating dockside power. There is also considerable manpower saved by collocating office/laboratory and dock spaces, thus saving the transit time associated with the continuous movement between locations. In addition, there is substantial technical benefit and savings of scale accrued by bringing the personnel associated with the two operations together.</p> <p><b>CURRENT SITUATION:</b></p> <p>The USNS Hayes is currently berthed at leased pier space at Port Canaveral with personnel located in a leased office/warehouse on the other side of the Port. To conduct ship acoustic signature measurements and analysis, and underwater weapons research and development testing, the Hayes</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62701 NAVAL SURFACE WARFARE CENTER DETACHMENT FORT LAUDERDALE, FLORIDA		
4. Project Title SEAWALL AND SHIP BERTHING FACILITY	7. Project Number 893	
<p>(...continued)</p> <p>transits to the Fort Lauderdale/Bermuda test areas. On-site research time is lost due to the need for the extra transit time and inefficiencies of supporting personnel at two separate locations approximately 160 miles apart. The annual cost for operating out of Port Canaveral is \$2,264,000. The existing wharf and concrete apron at the SFTF site require significant reconstruction to provide adequate ship's berthing. The existing seawall/bulkhead has been undermined by storms and surface erosion has occurred in the area behind the bulkhead. The 16 feet deep berthing slip requires dredging to a 30 feet depth to support the Hayes. A new bulkhead is required to support the increased dredge depth required by the USNS Hayes and to prevent undermining of the existing bulkhead.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Navy will continue to inefficiently operate at two remote, separate sites with high costs, foregoing an approximate \$1.4M annual savings. Ship transit between Port Canaveral and the deep water test area in the Bahamas will continue to contribute to the loss of valuable test range time. The Flag level commitment to the community to merge USNS HAYES with the new oceanographic center (South Florida Ocean Measurement Center) will not be met.</p>		
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 10. Description of Proposed Construction					
Masonry and steel frame building, concrete and steel grate floor, paint booth and functions, aircraft apron and access apron, wash rack, mechanical and electrical utilities, pollution treatment systems, fire suppression, technical support manuals, parking, and site improvements.					
11. Requirement: <u>2,108 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>					
PROJECT:					
Constructs facilities to accommodate the new T-6A training aircraft scheduled for delivery in early FY 03 to replace the T-34 aircraft.					
GSE/Support Paint Facility = 2,108 m2 = 22,691 Square Feet					
GSE Building = 881 m2 = 9,483 Square Feet					
Paint Booth = 497 m2 = 5,350 Square Feet					
Wash Rack/Control Building = 730 m2 = 7,858 Square Feet (New mission)					
REQUIREMENT:					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N60508 NAVAL AIR STATION WHITING FIELD, FLORIDA		
4. Project Title JPATS T-6A GSE SUPPORT/ PAINT FACILITY	7. Project Number 240	
<p>(...continued)</p> <p>The ground support equipment (GSE) shop is required to provide space for the maintenance of ground equipment which supports aircraft operations. The paint booth is required for paint touch-up of aircraft. The wash rack is required for cleaning of aircraft in conjunction with periodic maintenance and corrosion prevention. The T-6A is scheduled to begin arriving at Naval Air Station (NAS) Whiting Field in early FY 03. A site evaluation report prepared by the manufacturer of the T-6A has identified the work described in this project as being necessary to accommodate the new aircraft.</p> <p>CURRENT SITUATION:</p> <p>The existing GSE shop is too small to support the equipment for the new aircraft. In addition, the existing GSE shop will continue to be required to support the Rotary Wing GSE. Paint touch-up is currently accomplished in hangar maintenance spaces. Due to the increased number of assigned aircraft during the seven year transition from T-34 to the T-6A, these spaces will be required for normal aircraft maintenance. The existing wash rack does not provide the necessary pre-treatment for metals (cadmium and chromium) that are introduced into the sanitary sewer system by wash rack operations. A new washrack located adjacent to the facility used for touch-up painting would be more efficient compared to the location of the existing wash rack.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The ability of this activity to provide maintenance for the new trainer will be severely restricted, impacting trainer availability and longevity.</p>

10. Description of Proposed Construction					
<p>Modification and renovation of a pre-engineered structure into a permanent, closed-in facility to include renovated concrete floor, storm-water diversion, restrooms, insulation, electrical power, a controlled humidity system, closure of the open-air gaps between the walls and the roof and deck, electrically operated doors, force protection features, and site improvements.</p>					
11. Requirement: <u>9,300 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>					
PROJECT:					
Modifies and renovates an existing combat vehicle storage facility at MCLB Albany to provide humidity control, utilities, and restrooms.					
Renovate Vehicle Storage Facility = 9,300 m2 = 100,104 Square Feet (Current mission)					
REQUIREMENT:					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67004 MARINE CORPS LOGISTICS BASE ALBANY, GEORGIA		
4. Project Title RENOVATE VEHICLE STORAGE FACILITY	7. Project Number 920	
<p>(...continued)</p> <p>An adequate and efficiently controlled humidity storage facility to protect and store combat vehicles for MCLB Albany in order to prevent accelerated corrosion on combat essential equipment.</p> <p>CURRENT SITUATION:</p> <p>The existing 9,300 m2 pre-engineered shell structure was erected in 1993 for long-term, indoor storage of combat and combat support vehicles and equipment. While the structure does protect items from sun and wind, it provides no environmental protection from the humid Georgia climate for the extremely sensitive and expensive mechanical, electrical, and weapons systems equipment parts on the vehicles and equipment. The structure is not permanently affixed, not insulated, has no restrooms, has minimal electrical power, and is relatively insecure due to open-air gaps between the concrete hardstand and the walls and ceiling. The 6-12 inch wall gaps allow outside air, moisture, stormwater, and humidity inside the structure, creating a corrosive environment. Currently, the Logistics Base must perform extensive care of supplies in storage (COSIS) cycles to protect the vehicles and equipment in storage. These COSIS cycles demand a high number of manhours to inspect, unpack, depreserve, operate, represerve, repackage, transport, handle, and return the equipment to storage. By placing vehicles and equipment into a controlled humidity environment, the number of COSIS cycles required, maintenance costs, repair parts, and hazardous material usage will be significantly reduced.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Combat vehicles and equipment will continue to be stored in a high humidity environment which will require frequent and costly COSIS cycles and reduce availability of combat vehicles to the active forces.</p>

10. Description of Proposed Construction					
<p>The new facility will be a series of structural steel buildings with insulated metal wall and roof panels. Buildings include facilities and built-in equipment for blasting, painting and powder coating, air wash filtered exhaust system with dust collectors and blast media (steel grit) reclaiming equipment, breathing and low pressure air, and electrical service for portable painting and blasting equipment. Personnel support areas will include an air conditioned break room, support offices, rest rooms with shower and locker facilities.</p>					
11. Requirement: <u>3.352 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>					
PROJECT:					
This project consolidates four existing, inadequate painting and stand blast operations into one permanent, environmentally compliant, accessible, and efficient facility.					
Consolidated Sandblast/Paint Facility = 3,352 m2 = 36,081 Square Feet					
Metal Building (Large Booths) = 2,133 m2 = 22,959 Square Feet					
Metal Building (Medium and Small Booths) = 552 m2 = 5,942 Square Feet					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N44466 TRIDENT REFIT FACILITY KINGS BAY, GEORGIA		
4. Project Title CONSOLIDATED SANDBLAST/PAINT FACILITY	7. Project Number 568	
<p>(...continued)</p> <p>Admin/Support Space = 216 m2 = 2,325 Square Feet Covered Area (@ 50%) = 451 m2 = 4,855 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>An adequate and environmentally compliant facility is needed to provide a permanent corrosion control / prevention center. This center will provide corrosion control for numerous submarine components and base support equipment. These components range in size from hand held items to large oversized (tractor trailer sized) items such as gangways, stacking stands, tractor trailers, submarine camels, etc. The project addresses the environmental issues raised by the Georgia Department of Natural Resources, who recently issued a writted Notice of Violation (NOV), a written warning citing the presence of unacceptable release of spent blast media from existing painting and blast operations. Open air blasting and painting is no longer acceptable due to current environmental regulations.</p> <p>CURRENT SITUATION:</p> <p>The Naval Submarine Base at Kings Bay, Georgia currently has no permanent corrosion control facility to handle large submarine components and heavy equipment. Blasting and painting of components are currently performed by Trident Refit Facility (TRF) and the Base Operating Services Contract (BOSC) at several different sites onbase. TRF performs the majority of their painting and blasting at the waterfront; however, some minor tasks are performed at TRIDENT Refit Industrial Facility (Bldg. 4026). BOSC blasting and painting operations are performed at an outdoor facility, the "Monroe Hardstand," near Port Services (Bldg. 5041).</p> <p>TRF waterfront blasting and painting operations occur at the dry-dock. A 595 m2 galvanized steel frame and pvc coated polyester tent structure was purchased in 1992 to provide some degree of containment. The temporary tent offers poor lighting, poor ventilation, ineffective control of air borne contaminants and a life expectancy of less than six years.</p> <p>Under certain circumstances the current blasting process may be in violation of environmental and federal regulations due to fugitive emissions, unconfined spent media entering the soil and stormwater system with the potential of entering the bay. In August 1996, the Georgia Department of Natural Resources issued an NOV for improper labeling of hazardous waste. Included in the notice was a written warning citing the presence of spent blast media from the TRF temporary tent structure.</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																
3. Installation and Location/UIC: N44466 TRIDENT REFIT FACILITY KINGS BAY, GEORGIA																		
4. Project Title CONSOLIDATED SANDBLAST/PAINT FACILITY	7. Project Number 568																	
<p>(...continued)</p> <p>SUBASE took corrective action to clean the blast media in the fall of 1996. Approximately 60 cubic yards of soil and blast media were removed.</p> <p>In addition to posing a potential environmental hazard, the current process was considered inefficient because simultaneous blasting and painting operations could not be accommodated in the tent structure. Consequently, components are often staged onsite while waiting to be serviced. This backlog has prevented TRF from accepting Regional Maintenance type work.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The existing working conditions continue to pose a significant environmental hazard, promote inefficiencies, and represent an uneconomical process. The current facilities and working environment do not meet the present or future requirements found in the TRF and BOSC user groups. TRF and BOSC will not meet their mission requirements and therefore material conditions of high cost submarine components and facility support equipment will be compromised. In addition, current operations or remain exposed to hazardous substance releases, fines, and installation restoration of cost.</p>																		
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 3. Installation and Location/UIC: N00038 COMMANDER IN CHIEF, PACIFIC CAMP H.M. SMITH, HAWAII		
4. Project Title CINCPAC HEADQUARTERS (INCREMENT II)	7. Project Number 112A	
<p><i>(...continued)</i></p> <p>Adequate, consolidated, and efficiently configured facility is required for the Pacific Command Headquarters, consisting of U.S. Commander in Chief Pacific (USCINCPAC) and Special Operations Command Pacific (SOC PAC). To accomplish their missions, USCINCPAC and SOC PAC require a consolidated facility which provides administrative office space for approximately 950 personnel, as well as operational control spaces, where the rest of headquarters personnel gather and assess combat intelligence, perform tactical and strategic activities, and control tactical forces. In addition, communications and telecommunications centers supporting USCINCPAC/SOC PAC operations and other miscellaneous support areas (storage, automated data processing, electronics/communications maintenance shop, training) are required in the same facility to increase productivity and efficiency of operations. Most of the existing spaces currently occupied by USCINPAC and SOC PAC will be returned to the host activity, Marine Corps Base Hawaii (MCBH) Camp Smith, upon completion of this project.</p> <p>CURRENT SITUATION:</p> <p>USCINCPAC and SOC PAC currently occupy portions of 25 different buildings at Camp H.M. Smith. Of the 25 buildings, four are rated adequate for their present use, fourteen substandard, and seven inadequate. The buildings, rated inadequate and substandard, do not have adequate fire protection and air-conditioning systems, do not meet current seismic design criteria, and have poorly configured administrative and operational control spaces as well as deteriorated ceilings, walls and floors. The existing headquarters complex is a converted World War II hospital with many narrow, interconnecting multi-story wings. Functional staff elements cannot be logically located with respect to interactions with other elements within the same Command or with other Commands, resulting in operational/production inefficiencies. In addition, the Complex is characterized by wide, non-air-conditioned corridors; exposed electrical wiring &amp; plumbing lines; bare ceilings in many areas; asbestos-laden floor tiles and lead based paint; an inefficient mix of window and package air conditioning systems that service various portions of the Complex; a lack of insulation in air-conditioned areas; termite infestation of the various wooden components; and generally poorly maintained working spaces.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Pacific Command will continue to operate inefficiently in converted World War II vintage hospital buildings which are in various degrees of disrepair. Furthermore, the Commander in Chief of the U.S. Pacific</p>

10. Description of Proposed Construction					
<p>Multi-story, reinforced concrete or masonry facility with 150 "2x0" rooms with semi-private bathrooms, walk-in bulk storage closets, areas for microwave/refrigerator units. Recreation, community, and service core areas consist of laundry facilities, lounges, indoor and outdoor recreation areas, administrative offices, housekeeping areas, and public restrooms. Electrical systems include fire alarms and information systems. Mechanical systems include fire sprinklers and air conditioning. Supporting facilities work includes site and building utility connections (water, sanitary, and storm sewers, electrical, telephone, local area network (LAN), and cable television). Paving and site improvements include paved parking, sidewalks, outdoor recreation area, and landscaping. Demolishes an equal number of inadequate BEQs. Intended Grade Mix: 170 E1-E3; 65 E4-E5. Total: 235. Maximum Utilization: 300 E1-E3.</p>					
<i>(Continued On DD 1391C)</i>

4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 741	
<p>(...continued)</p> <p>11. Requirement: <u>4.783 PN</u>                      Adequate: <u>1.132 PN</u>                      Substandard: <u>1.110 PN</u></p> <p>PROJECT:</p> <p>Constructs "2x0" bachelor enlisted quarters (BEQ) with 150 rooms for permanent party enlisted personnel.</p> <p>Bachelor Enlisted Quarters = 6,375 m2 = 68,620 Square Feet Building = 6,375 m2 = 68,620 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and modern bachelor quarters which meet quality of life standards for permanent party enlisted personnel.</p> <p>CURRENT SITUATION:</p> <p>Currently, Marine Corps Base (MCB) Hawaii, with 48% of its BEQs listed as inadequate, has the worst barracks situation in the Marine Corps. Over 60% of the BEQs on MCB Hawaii are more than 45 years old. Built in the 1940's and early 1950's as open squad bay facilities, these barracks were later renovated to three-man configured rooms in the 1970s. With almost 50 years of aging and degradation, these inadequate buildings require constant repair, maintenance and refurbishment to maintain minimum habitability. Deteriorating foundations, plumbing that is practically irreparable, and electrical systems that verge on the unsafe are the norm. Unable to meet DoD or Marine Corps "2x0" standards of design, these over-crowded and decayed facilities seriously impact the quality of life, morale, and retention rates of the junior enlisted Marines and Sailors. In a recent retention survey conducted by Marine Corps Community Services (MCCS), eight of the top ten reasons that first-term Marines leave the Corps were barracks related. Additionally, because of the high cost of living in Hawaii, many junior Marines, who might otherwise be given the opportunity in less expensive areas to live off-base, have no other alternative than to endure the poor quality of life the existing barracks provide. Economically, these barracks are also a severe drain on a limited base operating support budget. Representing only 6% of the facilities on base, the inadequate BEQs consume 22% of the maintenance funding and contribute to a \$10 million backlog for maintenance and repair.</p> <p>IMPACT IF NOT PROVIDED:</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																										
3. Installation and Location/UIC: M00318 MARINE CORPS BASE KANEOHE BAY, HAWAII																												
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 741																											
<p>(...continued)</p> <p>Junior enlisted personnel will continue to be housed in deteriorated, over-crowded, and inadequate barracks to the detriment of their morale, retention, and readiness. Training time will continue to be diverted for large scale self-help projects to maintain minimum livability standards. An inequitable amount of maintenance dollars will continue to be diverted from training facilities to barracks, which will exacerbate growing readiness problems and increase exponentially over time as existing buildings deteriorate further.</p>

10. Description of Proposed Construction

Two-story concrete masonry structure with raised concrete foundation, fire protection system, information systems, raised floor in computer area, and comfort and equipment air conditioning; 30.5 meter tracking tower; utilities; paving and site improvements; and, demolition of one building and two towers at Special Area Nanakuli.

11. Requirement: 260 M2 Adequate: 0 M2 Substandard: 0 M2

PROJECT:

Constructs Consolidated Fleet Test Support facilities for concurrent testing and evaluation of ship-board Electronics and Combat Systems Readiness.

Consolidated Fleet Test Support Facility = 260 m2 = 2,799 Square Feet (Current mission)

REQUIREMENT:

*(Continued On DD 1391C)*

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N35266 NAVAL UNDERSEA WARFARE DETACHMENT LUALUALEI, HAWAII		
4. Project Title CONSOLIDATED FLEET TEST SUPPORT FACILITY	7. Project Number 313	
<p>(...continued)</p> <p>Adequate and efficiently configured facilities are required to consolidate the equipment and personnel at Nanakuli with the existing Shipboard Electronics Systems Evaluation Facility (SESEF) at Barbers Point for the operational evaluation of combat and navigational systems on surface ships and submarines. The new facility will allow concurrent Fleet operational testing and evaluation for multiple systems and programs. The new facility also provides support for Radio Direction Finding, Combined Surface/Submarine Radiated Noise Measurement, and 3-D tracking range equipment packages.</p> <p>CURRENT SITUATION:</p> <p>The mission is currently accomplished in two remotely located facilities, one on Navy property and one on leased State-owned property. The existing facilities are fully utilized and cannot accommodate the additional equipment necessary to support the mission. Valuable new systems test equipment is now stored in temporary shelters until the completion of this project.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Additional increased Fleet sailing time will continue to be required due to the multiple system tests now done at two different locations and the inability to accomplish multiple tests at the same site. Test site operational inefficiencies and associated increased costs will continue due to multiple equipment changes for successive system tests. Lost time occurs because detachment personnel cannot conduct simultaneous testing and additional ships' transits to accomplish the multiple tests. An additional possible impact is the increased risk that ships' personnel errors and equipment faults will go undetected.</p>		
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 10. Description of Proposed Construction					
<p>Demolish 152 meter (500 foot) section of existing Supply Wharves K10 and K11 and construct a new reinforced concrete wharf on concrete piles with capacity to support supply loading and unloading operations. A new sheetpile bulkhead will be installed just beyond the existing bulkhead at the reconstructed section of the wharf. A new fender system at the reconstructed section will consist of precast concrete piles and foam-filled fenders at 60 feet on center, along the outboard edge of the wharf. Other work includes cathodic corrosion protection for the new sheetpile, earthwork and repaving at the new sheetpile deadman, and the demolition, temporary capping and replacing of the existing utility lines beneath the existing wharf.</p>					
11. Requirement: <u>  0LS  </u> Adequate: <u>  0LS  </u> Substandard: <u> 152LS </u>					
PROJECT:					
This project upgrades wharf load capacity and fender system at Wharves K10 and K11 to provide adequate waterfront berthing facilities for supply ships.					
Wharf Upgrade = 152 MB = 499 Feet of Berthing (Current mission)					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00604 FLEET INDUSTRIAL SUPPLY CENTER PEARL HARBOR, HAWAII		
4. Project Title WHARF UPGRADE	7. Project Number 138	
<p data-bbox="115 302 240 327"><i>(...continued)</i></p> <p data-bbox="123 331 310 357">REQUIREMENT:</p> <p data-bbox="123 401 1271 705">Adequate waterfront facilities are required for the safe berthing of supply ships. Supply Center, Pearl Harbor is tasked with performing the Water Terminal Clearance Authority functions for all DOD water shipments consigned through Hawaiian Island ports, and also providing traffic management and terminal services for the movement of DOD components through the military ocean terminals and must be responsive to the operational requirement of a DOD component. To perform this mission, Supply Center, Pearl Harbor requires adequate waterfront facilities for the safe berthing of supply ships.</p> <p data-bbox="123 751 407 777">CURRENT SITUATION:</p> <p data-bbox="123 821 1287 1440">Wharves K10 and K11 are Supply Center's primary berthing facilities for breakbulk/container supply ships. Approximately three supply ships and five to six surface/miscellaneous Navy ships berth at Wharves K10 and K11 per month. Additionally, K10 and K11 are the only wharves that have adequate length to berth the large supply ships. The Navy changed their parts pre-position strategy resulting from an increase in the number of large, heavy, long-lead items (such as nose cones for submarines) for easier access and quicker availability for the repair of ships and submarines in the Pacific. Wharves K10 and K11 were constructed in 1942. Because of their lengths, Wharves K10 and K11 can accommodate large ships and are heavily used. However, full use of heavy equipment is restricted in movement, positioning, and lifting capacity because of structural weakness in the wharves. As a result of engineering studies the load capacity on Kilo Docks has been limited for safe equipment operations. Allowable lifting load limits are therefore, less than full capacity of these machines. Very heavy lifting equipment cannot be used on the wharves at all. The existing timber pile fender system does not have adequate capacity to absorb the berthing energy of docking ships.</p> <p data-bbox="123 1486 488 1512">IMPACT IF NOT PROVIDED:</p> <p data-bbox="123 1556 1287 1791">If this project is deferred, full use of existing lifting/loading equipment will be limited. A judgement error in normal use of the equipment could result in damages to the structure and loss of lives. Normal docking and undocking operations will continue to damage the hulls of ships and/or the wharf structure. Consequently, Supply Center's ability to sustain the readiness of the fleet and shore activities could be compromised.</p>

10. Description of Proposed Construction					
<p>Multi-story, concrete masonry unit wall, steel-frame building with concrete foundation and metal roofing; SEAL operational space includes Dry Deck Shelter (DDS) bay, scuba shops, oxygen charging room, battery charging room, weight room, and locker rooms; supply space provides parts storage for scuba/dive gear, SEAL delivery vehicle, and DDS; special features include 50 ton and 5 ton bridge cranes, crane rails and structural supports, 12-inch thick concrete floor slab in DDS bay, compressed air system, intrusion detection system, and information systems; utilities (sewer, water, and electricity), building pilings, site improvements, and obstacle course; relocate existing ready storage locker; technical operating manuals for bridge cranes and air compressors.</p>					
11. Requirement: <u>6.437 M2</u> Adequate: <u>0 M2</u> Substandard: <u>44.666 M2</u>					
PROJECT:					
Construct new facilities for the relocation of Seal Delivery Vehicle Team (SDVT) ONE from Ford Island to Pearl City Peninsula.					
Relocate Seal Delivery Vehicle Team = 6,437 m2 = 69,287 Square Feet					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62813 NAVAL COMPLEX, PEARL HARBOR, HAWAII		
4. Project Title RELOCATE SEAL DELIVERY VEHICLE TEAM	7. Project Number 533	
<p>(...continued) (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate facilities are critical for SDVT ONE to maintain readiness for rapid deployment and to provide continuous and ongoing training to meet their mission requirements. Adequate facilities provide DDS bay for mock training; scuba shops for preparation of open circuit (compressed air) and closed circuit (100% oxygen) diving equipment; oxygen charging room for scuba tanks; battery charging room for SEAL Delivery Vehicle; classrooms for weapons, tactics, and dive training; and, weight and locker room for physical conditioning.</p> <p>CURRENT SITUATION:</p> <p>The current facility does not conform to the Ford Island Development Plan, which was prepared by the Ford Island Executive Steering Committee. This long-range concept plan has been briefed to Commander in Chief, Pacific Fleet (CINCPAC), Chief of Naval Operations (OPNAV), Secretary of the Navy (SECNAV), and the Hawaii Congressional delegation. A subsequent plan to relocate the entire SEAL compound to Pearl City has been coordinated with Commander, Naval Special Warfare Command (COMNAVSPECWARCOM). Starting with U. S. Special Operations Command (USSOCOM) Military Construction Project Q-449, Advanced SEAL Delivery System (ASDS) Facility, all facilities will be relocated to the Pearl City Peninsula.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this project, the ASDS Facility and SDVT ONE would be located at different sites, significantly impacting readiness, training, and mission objectives of SDVT ONE, and compromising the essential interoperability of SDVT ONE's command and logistics functions. SDVT ONE will be able to function as one command when both this project and the ASDS facility are completed. A short interim split of the SDVT ONE can be tolerated during the completion of the construction of the ASDS facility. However, extended operations in this manner will severely reduce the capability of this national security asset.</p>

10. Description of Proposed Construction					
<p>Multi-story (not to exceed five stories) reinforced concrete building; 87 "2+0" modules consisting of two 2-sailor rooms, each with a semi-private bath; lounges, laundry room, administrative area, elevator, refuse collection area, and ancillary and support spaces; fire sprinkler and alarm system, information systems, security monitoring, air conditioning, and utilities; demolition of existing paved surfaces, including an abandoned concrete apron/hangar foundation; new roadways and parking lots, landscaping, technical operating manuals.</p> <p>Intended grade mix: 348 E1-E4; Maximum utilization: 348 E1-E4</p>					
11. Requirement: <u>2,151 PN</u> Adequate: <u>734 PN</u> Substandard: <u>980 PN</u>					
PROJECT:					
Constructs a bachelor enlisted quarters to the 2+0 standard to support Oahu-wide regional billeting requirements.					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62813 NAVAL STATION PEARL HARBOR, HAWAII		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 593	
<p>(...continued)</p> <p>Bachelor Enlisted Quarters = 5,251 m2 = 56,521 Square Feet  Building (2+0) = 5,251 m2 = 56,521 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate regional bachelor enlisted facilities are required to accommodate the E1-E4 personnel on Oahu. The Oahu regional requirement includes the following areas:</p> <ul style="list-style-type: none"> <li>- Naval Station, Pearl Harbor</li> <li>- Naval Magazine, Lualualei</li> <li>- Naval Computer and Telecommunication Area Master Station Pacific, Honolulu</li> <li>- Naval Security Group Activity, Kunia</li> </ul> <p>The primary mission of Naval Station, Pearl Harbor, is to provide base operating support for the operating forces of the U.S. Navy and for dependent activities and other commands as assigned and to provide support for submarine and surface ship training. The Naval Station is the program manager and provider of shore services to the Oahu region for operational control of the harbor and support functions including bachelor quarters, family services, and morale, welfare, and recreation.</p> <p>CURRENT SITUATION:</p> <p>Oahu's existing available Navy E1-E4 bachelor enlisted facility assets, 1,714 PN, do not accommodate the 2,151 E1-E4 bachelor personnel currently assigned to Oahu Navy bases. Additionally, the facilities are inadequate, 1940-vintage, have severe material deterioration, have repair costs exceeding 75% of new construction cost, and are considered for demolition.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Naval Station will not be able to provide adequate billeting facilities for relocating personnel. Navy junior enlisted personnel will have to seek private rental housing. This will be a difficult task for junior enlisted personnel due to Hawaii's high cost rental market. The Oahu Military Housing Market Analysis concludes that, by the year 2001, there will be a significant unsatisfied requirement in military bachelor and family housing when accounting for on-base military-owned and off-base rental units on Oahu. Military personnel will be forced to accept substandard, overcrowded living arrangements where available. These conditions are unacceptable and will negatively impact the operational</p>

10. Description of Proposed Construction				
<p>Permanent-type open-bay drill hall with clear span, training support spaces, administrative offices, fire protection system, air conditioning, electrical and mechanical supporting utilities, paving, site improvements, technical operating manuals, and demolition of one drill hall.</p>				
11. Requirement: <u>6.050 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>				
PROJECT:				
Constructs a replacement Drill Hall at the Recruit Training Command for year round training.				
Recruit Training Drill Hall = 6,050 m2 = 65,229 Square Feet (Current mission)				
REQUIREMENT:				
Adequate facilities are required to support mission mandatory training such as close order drill, physical fitness training, ceremonial				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00210 NAVAL TRAINING CENTER GREAT LAKES, ILLINOIS		
4. Project Title RECRUIT TRAINING DRILL HALL	7. Project Number 640	
<p>(...continued)</p> <p>exercises, and other large divisional assemblies during harsh winter conditions (Nov-Mar), excessive heat days (July-Sept), and inclement weather during the year. This is a proactive initiative to recapitalize the second of four facilities and eliminate the potential of catastrophic failure of the existing facilities or closure for safety considerations.</p> <p>CURRENT SITUATION:</p> <p>The existing three drill halls used for drilling and physical fitness training were semi-permanent structures that were constructed in 1942 as temporary buildings with an intended useful life of five years. All drill halls are fully utilized for various recruit training activities during daily training hours (0430-2000). When inclement weather prevents outdoor training, barracks space must be used since the drill halls are at maximum capacity. All drill halls have been under continuous repair since 1943 for delaminated wood arches and biological decomposition. A near catastrophic failure of most arches occurred in 1982 and as a result, a major renovation project was undertaken in 1984 to extend the useful life of the facilities for 15 years. Presently, there are indications of accelerated wood rot and delamination of the arches and deterioration of roof decking and tie beams. The progression of delamination and, in particular, biological decomposition has worsened, as indicated by current roof deflections similar to those that preceded the collapse of another drill hall.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Structural deterioration of the drill halls will continue to accelerate with time to a point where eventually the facilities will have to be closed for safety considerations. Without drill hall facilities, RTC will not be able to train sailors on a year round basis in the basics of physical fitness and drilling.</p>

10. Description of Proposed Construction				
<p>Three-story concrete and masonry, steel framed enclosed building (Seismic Zone 1) including a basement; sloped roof; heating, ventilation, and air conditioning; fire protection; electrical, mechanical, and underground utilities; indoor track; fitness and aerobics area; free weights and other fitness equipment; paving and site improvements; and, demolition of one drill hall.</p>				
11. Requirement: <u>16,975 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>				
PROJECT:				
Constructs a new recruit physical training facility at the Recruit Training Command (RTC) to replace existing drill hall Building 1400 and Building 800.				
Physical Training Facility = 16,975 m2 = 182,717 Square Feet (Current mission)				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00210 NAVAL TRAINING CENTER, GREAT LAKES, ILLINOIS		
4. Project Title PHYSICAL TRAINING FACILITY	7. Project Number 710	
<p>(...continued)</p> <p>REQUIREMENT:</p> <p>Adequate indoor space is required for the current physical fitness program in the RTC curriculum. Physical fitness plays a critical role in today's recruit training environment. The frequency of physical training required for each recruit has recently increased. A facility is needed to provide a single location to perform the physical fitness regimen necessary to maintain the RTC physical readiness standards.</p> <p>CURRENT SITUATION:</p> <p>The physical fitness training for recruits is hampered by the lack of suitable facilities. A high volume of this training is currently being conducted in drill halls, Buildings 1400 and 800, and in the barracks. Building 1400 and Building 800 were constructed in 1942 as temporary buildings with an intended useful life of 5 years. Drill halls have been under continuous repair since 1943 for delaminated wooden arches and biological decomposition. A near catastrophic failure of most arches occurred in 1982 and as a result, a major renovation project was undertaken in 1984 to extend the useful life of the facilities for 15 years. Approximatety \$600,000 per drill hall was expended to patch up these drill halls. A 1998 Structural Engineering study reports indications of accelerated wood rot and delamination of the arches and deterioration of roof decking and tie beams. The progression of delamination and, in particular, biological decomposition has worsened as indicated by current roof deflections similar to those that preceded the collapse of another drill hall. Conducting physical fitness and drill training in the barracks is unsuitable.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If the deficiency is not corrected, the physical fitness training mission requirements will not be met. The Navy's goal to produce fit, disciplined and motivated sailors will not be realized if these facilities are not replaced. Mission support and readiness throughout the Navy will be impacted without suitable fitness and drill training facilities. Deficiencies in the physical training program and facilities at RTC Great Lakes were highlighted during Congressional hearing on the Kassenbaum-Baker Committee Report and also noted by the Secretary of Defense.</p>

10. Description of Proposed Construction				
<p>Three-story, concrete and masonry, steel framed building with standing seam metal roof, heating, mess area, entrance canopy, elevators, ventilation and air conditioning, electrical and mechanical utilities, fire protection, telephone and underground conduit and wiring, technical operating manuals, parking and site improvements. Intended Grade mix: 1,056 Recruits. Maximum utilization 1,056 Recruits.</p>				
11. Requirement: <u>1,056 PN</u> Adequate: <u>0 PN</u> Substandard: <u>0 PN</u>				
PROJECT:				
Provides a new 1,056 PN Recruit Barracks for open-bay housing of recruits, messing facilities, and academic instruction spaces in the same building to provide more efficient training time. This new training concept is currently being used successfully by the Army and Air Force and utilizes an "all in one complex" (AIOC) for more efficient use of training time.				
Recruit Barracks = 15,993 m2 = 172,147 Square Feet				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00210 NAVAL TRAINING CENTER GREAT LAKES, ILLINOIS		
4. Project Title RECRUIT BARRACKS	7. Project Number 730	
<p>(...continued)</p> <p>Bachelor Enlisted Quarters = 13,728 m2 = 147,767 Square Feet  Applied Instruction Building = 912 m2 = 9,816 Square Feet  Enlisted Dining = 1,353 m2 = 14,564 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate recruit barracks are required to house 1,056 recruits. This project is one of two initial projects to correct this space deficiency and institute a new training concept where the academic recruit training is done in the same facility as the living quarters. Future projects will be submitted to replace all of the existing barracks using this AIOC concept.</p> <p>CURRENT SITUATION:</p> <p>Recruit training is hampered by the lack of suitable or adequate berthing facilities. Currently, recruits are housed in barracks that have a space allowance of 50 Net Square Feet (NSF) per recruit and a waiver is required to operate in this manner. This does not meet the current standard of 72 NSF per recruit. In addition, the current facilities were built in the 1950's and 1960's and are reaching the end their useful life. Maintenance is a major problem and there is no air conditioning in any of the barracks. Based on a current study evaluating the Recruit Training Center (RTC) Barracks, approximately \$25 million per barracks will be required to correct the current maintenance backlog and criteria deficiencies. This project is required to correct the existing deficiency in berthing space at RTC Great Lakes.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If the deficiency is not corrected, the training mission requirements will be severely impacted. The Navy's long range recruiting goals will not be realized if these facility deficits continue to exist. Mission support and readiness throughout the Navy will be impacted if recruit training is limited by lack of berthing and training spaces. These deficiencies at RTC Great Lakes are resulting in the inability to train an adequate number of recruits to meet the fleet requirements. This is a major concern to Chief of Naval Operations and the Secretary of the Navy.</p>

10. Description of Proposed Construction				
<p>Concrete and bituminous pavements for aircraft de-icing/rinsing pad and concrete pavements for taxiway "G" extension connecting parallel taxiway with inboard runway. De-icing components include waste de-icing fluid collection trench, catch basins, underground storage tanks, waste glycol loading facility and related waste piping. Rinsing components include pump house, below pavement rinse nozzles, oil/water separator and related potable water piping. Technical operating manuals will be provided.</p>				
11. Requirement: <u>  0LS  </u> Adequate: <u>  0LS  </u> Substandard: <u>  0LS  </u>				
PROJECT:				
Provides a new, state-of-the-art aircraft de-icing/rinse facility that will be able to operate year-round. (Current mission)				
REQUIREMENT:				
Adequate de-icing/rinse facilities are required to support seven squadrons (four active duty and three reserve squadrons totaling 54 aircraft). Additional transient aircraft, including aircraft associated with the AEGIS testing program at Bath Iron Works, use NAS Brunswick for their

3. Installation and Location/UIC: N60087 NAVAL AIR STATION BRUNSWICK BRUNSWICK ME		
4. Project Title AIRCRAFT DE-ICE/RINSE FACILITY	7. Project Number 115	
<p>(...continued)</p> <p>flight operations. These aircraft require rinsing after operations to reduce airframe corrosion. There is also a need to apply de-icing fluids (propylene glycol) to the aircraft during winter operations. This project will deliver aircraft de-icing and rinsing fluids from two hydraulically operated booms, providing quicker delivery of the flights and better coverage of the aircraft, increasing operational safety of the aircraft. Below grade rinsing nozzles will provide year round rinsing capability for the underside of the aircraft.</p> <p>CURRENT SITUATION:</p> <p>At present, a bird bath aircraft rinse facility operates during the months of April to October. Runoff from this facility passes through an oil/water separator and is then discharged in the storm water system. This facility cannot operate during winter months due to low ambient temperatures. Additional aircraft washings (manually, in hangar) are required during the winter months when the rinse facility operations are suspended. During winter months, de-icing fluids are sprayed onto the aircraft by a fleet of Trump trucks. The de-icing fluids discharged are not recaptured, resulting in local stream contamination. While NAS Brunswick presently has a permit to discharge the de-icing fluids into the storm water system, future permit applications are expected to meet with resistance from the State of Maine.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Failure to provide the proposed de-icing/rinse facility will result in continued reliance on the inferior de-icing fluid delivery system obtained from Trump truck application, resulting in decreased flight operation safety. The aircraft rinse facility will continue to be operated only in warm weather, leading to either more corrosion of the airframes during winter flight operations or more frequent aircraft washing cycles. De-icing fluids will continue to be discharged into the environment, leading to possible future violations.</p>

10. Description of Proposed Construction					
<p>A two story, steel-frame building, with insulated concrete masonry exterior walls, reinforced concrete floor and spread-footing foundation, and metal standing-seam insulated roof; test and repair labs, inspection area, shipping and receiving, offices, and conference room; sprinkler fire protection and alarm systems, mechanical equipment room, canopied entrance ways and loading dock areas, elevator meeting accessibility standards, air conditioning, utilities, paving and site improvements, exterior lighting, demolition of 12 buildings with disposal of asbestos and lead paint, and technical operating manuals.</p>					
11. Requirement: <u>4,186 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>					
PROJECT:					
Constructs a replacement facility for the Joint Service Explosive Ordnance Disposal Equipment Support Facility.					
Joint Service EOD Equipment Support Facility = 4,186 m2 = 45,058 Square Feet (Current mission)					
<i>(Continued On DD 1391C)</i>

3. Installation and Location/UIC: N0464A NAV EXPLOSIVE ORDNANCE DISPOSAL TECH DIV INDIAN HEAD, MARYLAND		
4. Project Title JOINT SERVICE, EOD EQUIPMENT SUPPORT FAC	7. Project Number 110	
<p>(...continued)</p> <p>REQUIREMENT:</p> <p>Adequate and properly configured facilities to house Joint Service Explosive Ordnance Disposal (EOD) logistics support including in-service engineering, acquisition/technical support, depot level repair, quality assurance testing and inspection, and spare parts stock point for all special EOD equipment of the Joint Service EOD teams of the Army, Navy, Air Force, and Marine Corps. Efficient and timely support for increasingly complex EOD equipment requires adequate engineering and maintenance work space, hydrostatic and environmental test labs, an oxygen cleaning lab, and environmentally controlled standard material staging areas. These functions are critical to maintaining readiness of EOD forces around the world and improving EOD tools and equipment to counter emerging threats.</p> <p>CURRENT SITUATION:</p> <p>Explosive Ordnance Disposal (EOD) military support demands are increasing across the spectrum of national security requirements. These functions are currently performed in 12 widely dispersed buildings scattered about the Naval EOD Technology Division. Only one of the facilities was designed for its present function. Inappropriate sizes, environmental conditions, configurations, and locations do not permit streamlined work processes for most efficient operation, resulting in reduced productivity, longer process times, and higher operating costs. The main facility is a converted WWII warehouse. The building contains asbestos and was partially condemned for structural failures.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this project it will be necessary to continue conducting essential EOD equipment logistics support functions in scattered, deteriorating buildings which are unable to support current and projected workload. Continued use of these buildings delays provision of certified EOD equipment and will increase the backlog of items needing repair. Economic analysis shows that the MILCON facility will improve the EODTECHDIV's efficiency resulting in projected annual savings. In addition, there are significant costs to repair and maintain current infrastructure, which will be avoided.</p>

10. Description of Proposed Construction

Construct a supply warehouse with controlled humidity storage, inert storage, magazine, MK-76 practice bomb build up facility, conversion of Operational Training to Academic Instruction, installation of CO2 detection and ventilation, installation of "Dead Man" device and Hold Back Fitting at Jet Engine Test Cell, field calibration facility, modify existing hangar space, electrical and mechanical utilities, heating, ventilation, air conditioning (HVAC) systems, technical operating manuals, and site improvements.

*(Continued On DD 1391C)*

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N63043 NAVAL AIR STATION MERIDIAN MISSISSIPPI		
4. Project Title T-45 AIRCRAFT SUPPORT FACILITIES	7. Project Number 289	
<p>(...continued)</p> <p>11. Requirement: <u>3,500 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT: Construct facilities required to support 90 T-45 aircraft.</p> <p>T-45 Aircraft Support Facilities = 3,500 m2 = 37,674 Square Feet  Supply Facility = 1,096 m2 = 11,797 Square Feet  Controlled Humidity Storage = 446 m2 = 4,801 Square Feet  Magazine = 56 m2 = 603 Square Feet  Bomb Buildup Facility = 50 m2 = 538 Square Feet  Trainer Building Modifications = 900 m2 = 9,688 Square Feet  Hangar Space Modifications = 348 m2 = 3,746 Square Feet  Field Calibration Facility = 186m2 = 2,002 Square Feet  Inert Storage = 418 m2 = 4,499 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Additional support facilities are required to support the planned increase from 19 to 90 T-45 Aircraft at Naval Air Station (NAS) Meridian.</p> <p>CURRENT SITUATION:</p> <p>The existing warehouse and ordnance facilities are too small to support the new aircraft. Adequate classroom space for pilot training is not currently available for the flight operations area. Existing facilities are inadequate to support additional T-45 Aircraft.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Naval Air Station Meridian will not have the facilities required to support a quantity of 90 T-45 aircraft. A slower turnaround time in maintenance and service of the aircraft will directly affect student Naval Aviator Training throughput.</p>

10. Description of Proposed Construction				
<p>Permanent structure of brick and block cavity wall on a concrete slab with a standing seam metal roof on a steel structure. The facility has a food court, kitchen, bar, game room, TV/movie/dance floor/training room, Cybernet Cafe, bathrooms, offices, storage, janitorial, mechanical air and heat, utilities, fire protection, and information systems. Site improvements include a deck, sidewalks and curbs, 20 car asphalt parking lot and driveways, lighting signals, and landscaping. Access will be via existing roadways.</p>				
11. Requirement: <u>1,279 M2</u> Adequate: <u>0 M2</u> Substandard: <u>352 M2</u>				
PROJECT:				
Construct a new waterfront cafe and recreation complex to provide additional recreational activities at NWS Earle in New Jersey.				
Recreation Center: 1,279 m2 = 13,767 Square Feet (Current mission)				
REQUIREMENT:				
Adequate facilities are required to provide a recreational complex on NWS Earle's waterfront. NWS Earle's waterfront is homeport to four fast combat support ships (AOE class), and each has a complement of 650				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																						
3. Installation and Location/UIC: N60478 NAVAL WEAPONS STATION EARLE, NEW JERSEY																								
4. Project Title RECREATION CENTER	7. Project Number 999																							
<p>(...continued) sailors.</p> <p>CURRENT SITUATION:</p> <p>On October 8, 1998 the Pier 5 Club, located on the waterfront of NWS Earle, burned to the ground. The facility provided breakfast, lunch, and dinner food service and catering; a bar; and a game room with three pool tables and twenty arcade games. Occupancy levels for the facility averaged 300 people inside plus 300 on the outside patio during warm weather months. When ships were in port, the facility had waiting lines for entry in the evening. Because of the remote location of the Earle Piers, use of commercial facilities is not feasible.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The waterfront population will not have adequate food, beverage, and recreation facilities. Restaurant food service would be limited to the sandwich shop and a snack bar at the temporary facility. Neither is large enough to handle the average waterfront population.</p>

<p>(...continued)</p> <p>11. Requirement: <u>5,315 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT:</p> <p>Constructs an Amphibious Operations/Maintenance/Storage Complex with direct water access for the Small Craft Company, Headquarters Battalion, 2d Marine Division, MCB Camp Lejeune, NC.</p> <p>Amphibious Ops/Maint/Storage Complex = 5,315 m2 = 57,210 Square Feet  Amphibious Operatiooons/Maintenance Complex = 2,322 m2 = 24,994 Square Feet</p> <p>Covered and Hazard Material Storage = 2,947 m2 = 31,721 Square Feet  Armory - 46 m2 = 495 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>A consolidated and adequate amphibious operations, maintenance, and storage complex with direct water access is required to support the mission requirements of the Second Marine Division's Small Craft Company.</p> <p>CURRENT SITUATION:</p> <p>In February 1997, the II MEF Special Operations Training Group (SOTG) was reorganized to better support the Marine Corps Riverine Operations mission. The Small Craft Company (SCC) currently supporting this mission works out of four WWII-era wooden mule stables located in the industrial district of Camp Lejeune. Currently, the SCC has no direct water access and thus must tow their Raider Crafts several miles through busy mainside Camp Lejeune streets to either the recreational ramp at Gotttschalk Marina and launch as opportunity permits, or travel 8 miles to Courthouse Bay and share with the Amphibious Assault Vehicles Battalion. No piers exist that will allow the docking of watercraft for extended periods, so the boat company is forced to be "land-based" at all times. The existing facilities in the industrial district are insufficient in size to properly and safely repair, maintain, and store the unit's equipment and vehicles. Areas required for special maintenance functions do not exist (such as fiberglass repair, painting, marine engine repair). The Company's 17 Riverine Assault Crafts (RACs), 65 Rigid Raider Crafts (RRCs), 80 Zodiacs (rubber boats), 14 five-ton trucks, 17 Humvees, multiple trailers, motors, and equipment are mostly stored outside in the corrosive salt air environment under tarps. In addition, since most of the craft are too large to fit into the limited designated maintenance areas, work is usually performed outside. Finally, the rubber Zodiacs, because they are</p>

<p>(...continued)</p> <p>so pilferable, must be deflated (against recommended procedure) and be folded small enough to fit into the limited available storage space. This causes rapid deterioration and increases the time required to prepare the boats for operations and training.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without consolidated facilities with water access that can provide adequate space for operations, maintenance, and storage, the 2d Marine Division Small Craft Company's combat readiness to perform the Riverine mission will continue to be severely degraded. The Small Craft Company will continue to spend an inordinate amount of time trying to maintain equipment in facilities inadequate to the task and transporting craft from the mainside base industrial area through traffic to piers miles away that have limited access. These logistics interruptions will continue to impact the opportunity and time available to train or to perform the Riverine mission.</p>

10. Description of Proposed Construction					
<p>Single story, steel frame building with walls of brick veneer on Concrete Masonry Unit (CMU) backup, concrete foundation and floor, standing seam metal roof, building insulation, air conditioning, dehumidified storage area, fire protection and alarm systems, telephone, utilities, paving and site improvements. Demolish five buildings.</p>					
11. Requirement: <u>3,007 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>					
PROJECT:					
Constructs an operations, maintenance, and storage facility for the 8th Communications Battalion, 2d Marine Division, MCB Camp Lejeune, NC.					
Operations/Maintenance/Storage Facility = 3,007 m2 = 32,367 Square Feet					
Communications/Electronics Storage = 2,452 m2 = 26,393 Square Feet					
Vehicle Maintenance Shop Wheeled = 163 m2 = 1,755 Square Feet					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA		
4. Project Title OPERATIONS/ MAINTENANCE/STORAGE FACILITY	7. Project Number 118	
<p>(...continued)</p> <p>Operations Area = 278 m2 = 2,992 Square Feet Elec/Comm Testing Operations = 114 m2 = 1,227 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Provide an adequate operations, maintenance, and storage facility for the 8th Communications Battalion at MCB Camp Lejeune, NC to accommodate the personnel and equipment of three Direct Support Communications Companies (150 Marines each). Each D/S Company's table of equipment includes digital radios, 10-20 foot radio/communications military vans, 100 radio Humvees, tactical telephones, cryptographic items, field wiring harnesses, and organizational (1st and 2nd echelon) test equipment. The 8th Comm Bn's mission is to provide intermediate maintenance to communications electronic equipment (to include satellite systems computers) and organic cryptographic software storage and hardware repair capability.</p> <p>CURRENT SITUATION:</p> <p>The 8th Communications Battalion currently occupies five inadequate buildings. Constructed between 1948 and 1952 as warehouses, these buildings lack sufficient utilities, electrical power, and space to support the mission requirements of the three Direct Support Companies.</p> <p>The existing 8th Communications Battalion buildings have no heating, air-conditioning, or plumbing. Consequently, Marines endure the high humidity, over 90 degree North Carolina summers with only floor fans and relaxed uniform rules (PT gear) providing respite. The excess humidity also causes a serious corrosive environment around sensitive electronic equipment that requires the Marines to do three times more maintenance than normal. In the winter, Marines must use kerosene space heaters to curb the freezing temperatures. With no plumbing, the 8th Comm Bn must use "Port-A-Jon" outdoor restroom facilities (3 servicing 450 Marines), a tactical water bull for drinking water, and a garden hose for washing requirements.</p> <p>Additionally, the building's lack of sufficient electrical power (buildings are wired with 110V vice the required 3-phase 208V) force the 8th Comm Bn to maintain radio equipment and to train Marines outdoors in a parking lot using tactical generators. The limited power supply significantly slows maintenance production and overburdens tactical generators that are made for field vice garrison use. When indoor repair</p>

3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA																		
4. Project Title OPERATIONS/ MAINTENANCE/STORAGE FACILITY	7. Project Number 118																	
<p>(...continued)</p> <p>of especially sensitive gear is required, the Battalion must borrow maintenance space from other base units who have adequate power sources.</p> <p>Finally, the limited space in the existing facilities, combined with the requirement to securely store all communications gear, forces the 8th Comm Bn to sacrifice operational training and maintenance spaces for storage. Marines must cram Company communications gear on the few available shelves or stack equipment in numerous embarkation boxes throughout the complex. This adversely impacts equipment readiness, especially during inclement weather, because lack of indoor maintenance space complicates and delays repair and training operations. Current facilities also have no indoor space to maintain the 8th Comm Bn's large fleet of tactical vehicles.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The 8th Comm Bn will continue to operate in inadequate facilities that do not have the electrical power, climate control, or plumbing to meet minimum quality of work standards. This situation will continue to impair the 8th Comm Bn's ability to effectively perform their mission. High humidity will continue to promote premature deterioration of electronic components and will increase costs of maintenance for these items. Marines will continue to use kerosene heaters, port-o-Jon's, and contracted bottled water for warmth, hygiene, and hydration.</p>

<p>One-story facility with a foundation of concrete spread footings, masonry walls, steel framing, concrete floors, a standing seam roof, fire protection system, security lighting and other force protection features, closed circuit television, air conditioning, fenced-in playground with playground equipment and storage building, kitchen and laundry areas, classrooms, offices, toilets, storage spaces, utilities, and paving and site improvements. The interior will be finished with a combination of vinyl/quarry tile, carpet, painted concrete masonry unit walls, accoustical tile, gypsum board, and suspended ceilings.</p>					
11. Requirement: <u>2,396 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>					
PROJECT:					
Construct a Child Development Center (CDC) for 305 children and eliminate one relocatable trailer complex.					
Child Development Center = 2,396 m2 = 25,790 Square Feet (Current mission)					
REQUIREMENT:					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA		
4. Project Title CHILD DEVELOPMENT CENTER	7. Project Number 124	
<p>(...continued)</p> <p>Provide an adequate Child Development Center that meets safety and size requirements for use by active duty military personnel at Marine Corps Base (MCB) Camp Lejeune, NC. The Marine Corps' primary east coast training site, MCB Camp Lejeune supports over 40,000 military personnel with over 56,000 dependents. The base manages its considerable child care requirements through the full use of several means: a private on-base military child care center, an in-home program, two on-base military child development centers, and off-base private facilities. The Family Child Care Program trains and manages about 90 in-home providers who care for about 475 children. The in-home program, while a viable alternative, is limited by a high turnover of providers, the need to constantly train new replacements, the higher expense, and the difficulty in tracking quality of care. Off-base facilities in the City of Jacksonville are available but not as desirable as on-base programs because of significant disparities in quality of care, location, and expense. Unlike military CDC's, which are held to rigorous Department of Defense standards, North Carolina private child care centers are not required to be nationally accredited, allow much higher ratios of children to providers, and experience high turnovers of providers who are paid only minimum wages. Off-base centers also pose an inconvenience to the large number of Marines who live in military family housing areas and must drive off the base to deliver and pick-up their children. Additionally, off-base centers are significantly more expensive to use. For example, a junior enlisted Marine would have to pay \$337/month for off-base care versus the \$208/month charged on base.</p> <p>CURRENT SITUATION:</p> <p>Currently, MCB Camp Lejeune has a requirement to provide on-base child development center care for 599 children, but it only has adequate facilities to provide care for 174 children through the use of the private Officer Wive's facility (94 children) and the Brewster CDC (80 children). A third CDC, which this MILCON project will replace, consists of a temporary complex of leased relocatable facilities located in the Tarrawa Terrace family housing area. This CDC currently handles 270 children and has a waiting list of 145. The leased CDC was opened as an interim measure after a contracted fire protection and safety survey conducted in 1994 by the Science Applications International Corporation (SAIC) closed inadequate child development centers at Tarrawa Terrace and Midway Park due to uncorrectable facility deficiencies. Not intended for permanent use, the trailers have a relatively short life expectancy (5-7 years) and already require significant maintenance due to deterioration. Walkways are warped and require daily re-nailing. Window molding is falling apart,</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																						
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA																								
4. Project Title CHILD DEVELOPMENT CENTER	7. Project Number 124																							
<p>(...continued)</p> <p>base boards will not stay glued, and toilets overflow constantly. Rooms are improperly configured for child care and the center court area is a swamp. The facility does not meet Disabilities Act criteria. The sprinkler system pipes are corroded, the roof leaks, parking is inadequate, and door locks, handles, closures, and faucets break regularly. There is also insufficient space for adequate food preparation, classrooms, playgrounds, handicapped ramps, and parking.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Existing on-base Child Development Centers will continue to operate out of inadequate, interim relocatable facilities at full capacity with long waiting lists and will be unable to provide services to many eligible children. Military families will have to continue to use lesser quality and more expensive off-base facilities. Lack of adequate CDCs will continue to degrade the morale and quality of life of eligible military families.</p>																								
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 10. Description of Proposed Construction				
<p>Multi-story reinforced concrete frame building with 200 "2x0" rooms with semi-private bathrooms and walk-in closets, cable TV (CATV) and telephone communications cabling, recreation and service areas, laundry, fire protection system, air-conditioning, utilities, technical operating manuals, exterior walkways, grade beams pile caps, pile foundations, interior and exterior masonry walls, asphalt shingle roofing, exterior equipment washdown area, outside vehicle/equipment staging area, flexible parking, force protection features, storm water detention pond, and paving and site improvements.</p> <p>Maximum utilization: 400 E1-E3; Intended Grade Mix: 246 E1-E3; 77 E4-E5; Total: 323.</p>				
11. Requirement: <u>1,893 PN</u> Adequate: <u>778 PN</u> Substandard: <u>0 PN</u>				
PROJECT:				
Constructs a "2x0" bachelor enlisted quarters with 200 rooms for permanent party enlisted personnel at Courthouse Bay on Marine Corps Base (MCB) Camp Lejeune, NC.				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA		
4. Project Title BACHELOR ENLISTED QUARTERS (COURTHOUSE)	7. Project Number 159A	
<p>(...continued)</p> <p>Bachelor Enlisted Quarters = 8,500 m2 = 91,493 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and modern bachelor housing which meets quality of life standards for permanent party enlisted personnel at Courthouse Bay on MCB Camp Lejeune.</p> <p>CURRENT SITUATION:</p> <p>Because of Hurricane Fran damage in 1996, enlisted personnel from the Reconnaissance Battalion (Recon Bn) previously located on Onslow Beach lost their barracks and work spaces. The Reconnaissance Battalion's work spaces were relocated to Courthouse Bay, a subcamp within the greater MCB Camp Lejeune area. However, with a BEQ requirement of 1,893 persons and only adequate space for 778 Marines, Courthouse Bay was unable to accommodate the billeting requirements of the Recon Bn Marines. Consequently, the Recon Bn's enlisted Marines were relocated to inadequate barracks in the French Creek area 12 miles from their work areas at Courthouse Bay. Recon Bn Marines now live 4 Marines to a room in three buildings built in 1968 and 1970 as 3 man rooms. These buildings, which do not meet current DoD functional space or design criteria, also have inadequate ventilation, exhaust, communications wiring, and roofs. In addition to the excessive transportation costs, efficiency losses, and degraded quality of life experienced from billeting these troops in crowded facilities far from their unit location, the Recon Bn's presence in the French Creek barracks only further exacerbates French Creek's barracks deficiencies.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Enlisted Marines from the Reconnaissance Battalion will continue to live in overcrowded, inadequate French Creek area barracks while traveling 24 miles round trip to Courthouse Bay for work every day.</p>

10. Description of Proposed Construction					
<p>Armory facilities of reinforced concrete with masonry walls and exterior covered weapons cleaning areas. Structural walls shall be supported on spread footing, with a concrete slab on grade floor. The interior walls</p> <p style="text-align: right;"><i>(Continued On DD 1391C)</i></p>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA		
4. Project Title ARMORIES	7. Project Number 150	
<p>(...continued)</p> <p>will consist of solid concrete masonry units and provide each armory with a separate IDS system, dehumidification system, concrete floors, built-up roofing, fire protection, security fencing and lighting, compressed air, utility connections and telephones, parking, paving, and site improvements. Demolition of 15 buildings.</p>		
<p>11. Requirement:   <u>8,855 m2</u>                      Adequate:   <u>0 m2</u>                      Substandard:   <u>0 m2</u></p> <p>PROJECT:</p> <p>Consolidates and replaces four regimental armories and three battalion armories for the 2nd Marine Division and demolishes 15 buildings.</p> <p>Armories = 8,256 m2 = 88,867 Square Feet  2nd Marines = 1,575 m2 = 16,953 Square Feet  6th Marines = 1, 575 m2 = 16,953 Square Feet  8th Marines = 1,575 m2 = 16,953 Square Feet  10th Marines = 1,450 m2 15,608 Square Feet  Amphibious Assault Vehicle battalion = 726 m2 = 7,815 Square Feet  Headquarters Battalion = 611 m2 = 6,577 Square Feet  Covered Cleaning Area = 744 m2 = 8,008 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate consolidated armories for 2d Marine Division infantry regiments, artillery regiment, Amphibious Assault Battalion, Headquarters Battalion and Combat Engineer Battalion to secure, preserve, and maintain crew served weapons, small arms, and optical/night vision equipment.</p> <p>CURRENT SITUATION:</p> <p>The 2d Marine Division's crew served weapons (rifles, pistols, machine guns, mortars, night vision equipment, etc.) are currently stored in fifteen widely dispersed 1940's vintage buildings that were originally constructed as warehouses. Converted to armories in 1987, these buildings are deteriorated, undersized, not environmentally controlled, do not meet physical security requirements, and are not all located near the units they serve. Currently, 2d Division's armories have equipment stacked to the ceilings and in every available space. The overcrowded conditions inside the armories make it extremely difficult for armorers to maintain, preserve, and safely store the weapons. Additionally, non-environmentally controlled spaces in the high humidity, salt-air climate of North Carolina makes fighting corrosion a constant battle and diminishes the life expectancy and readiness of the Division's weapons. Extra security</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M67001 MARINE CORPS BASE CAMP LEJEUNE, NORTH CAROLINA		
4. Project Title ARMORIES	7. Project Number 150	
<p>(...continued)</p> <p>measures which include 24 hour armed guards 365 days a year are also required due to the inadequate structural composition of these former warehouses. The buildings, which have only 8 inch thick brick walls with gypsum board or suspended ceilings attached to wooden trusses and plywood roofs, fail to meet minimum design standards for armories and cannot be economically renovated to meet current physical security requirements. In addition, because of real estate limitations, 2d Marine Division is operating under an exception to OPNAV security requirements for armory clear zones inside and outside of their current fence lines. Finally, the fifteen armories that serve the 2d Marine Division are scattered throughout the division area and many are not near the units they support. Without consolidated, properly constructed armory facilities, large numbers of personnel are required to staff and guard the existing facilities.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The 2nd Marine Division will continue to secure, maintain, and preserve its crew served weapons in inadequate, undersized, and scattered facilities that lack environmental control and cannot meet physical security requirements without 24 hour armed guards.</p>

4. Project Title AIRCRAFT HANGAR IMPROVEMENTS	7. Project Number 568	
<p>(...continued)</p> <p>Aircraft Hangar Improvements = 12,549 m2 = 135,076 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate facilities and fire protection for operations, maintenance, and training of two KC-130 squadrons and parts of an aviation logistics squadron. Hangar 250 is the only hangar with sufficient vertical clearance to accommodate KC-130 aircraft.</p> <p>CURRENT SITUATION:</p> <p>The existing Hangar 250, which provides work spaces for approximately 650 Marines in two KC-130 squadrons and parts of a Marine Aviation Logistics Squadron, was constructed in 1954 and has inadequate lighting, power, heating, ventilation, air conditioning, insulation, and fire protection. Marines working on the hangar deck or in adjacent maintenance shops have little control over temperature, dust, humidity, and noise. Poor conditions of the electrical and mechanical utilities force Marines to open doors onto the extremely noisy flightline in order to get additional lighting and ventilation into their shops. Lack of humidity control creates a constant fight against corrosion in shops where sensitive electronic and mechanical subsystems are repaired and maintained. A number of computers have been damaged due to high humidity and moisture within the hangar. Moisture has also corroded the air-conditioning compressors rendering them inoperable and forcing Marines to work in PT gear during the hot, humid summers. Also, equipment and parts stored in hangar spaces require constant wipe down and lubing to keep ahead of the corrosion. The existing hangar is currently wired for 220V and 110V voltages, but the number of outlets and the power grid that supports them are insufficient and compel KC-130 mechanics to use a tactical generators not intended for daily garrison use. In addition to constant break-down and parts problems incurred by over-using these generators, personnel are subjected to extremely loud noise and strong fumes for hours while the generators are in use. Also, because of the lack of power outlets, extension cords are being used on the floor, creating trip hazards on a hangar deck already busy with work carts, tools, aircraft, and personnel. Additionally, the built-in compressed air lines in the current hangar have numerous leaks that allow water, dirt, and grit into the system and cause undue wear and tear on the compressors powering this pneumatic system. The leaks are so bad under the hangar deck that when aircraft are washed</p>

<p>(...continued)</p> <p>in the hangar, the air leaking up through the concrete causes bubbles in the soapy water on the floor.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this project, Marines will continue working in noisy, uninsulated, poorly lit facilities without adequate electrical power in the required voltages and frequencies for working on modern aircraft systems. The poor working conditions will continue to adversely affect personnel morale, efficiency, and productivity.</p>

10. Description of Proposed Construction					
<p>Addition to the chemical stripping hangar, one deck main hangar, two decks for support areas, pile foundations and stabilization, concrete floor, structural steel superstructure, masonry and galvanized steel curtain walls, standing seam galvanized metal roof, fire alarm and protection systems, heating, ventilation, and air conditioning system, elevator, bridge crane, media collection system, storage and delivery system, explosion-proof electrical service, wiring and devices, piping, contaminated soil cleanup, site improvements, and demolition.</p>					
11. Requirement: <u>1.671 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>					
PROJECT:					
Constructs an addition to the existing chemical stripping hangar to accommodate the plastic media blast (PMB) portion of the Naval Aviation Depot's (NADEP) chemical stripping process.					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N65923 NAVAL AVIATION DEPOT CHERRY POINT, NORTH CAROLINA		
4. Project Title AIRCRAFT STRIPPING FACILITY ADDITION	7. Project Number 979	
<p>(...continued)</p> <p>Aircraft Stripping Facility Addition = 1,671 m2 = 17,986 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate facilities are required to support paint stripping operations at the NADEP. Specifically, an adequate glass bead blasting facility, which meets safety and environmental requirements, is required for the NADEP's aircraft stripping operation. The stripping operation begins with blasting the aircraft with plastic media. Since not all of the paint is removed from the crevices, chemical stripping is then performed to remove the remaining paint. Any remaining corrosion is removed by blasting with glass beads. This facility will provide proper facilities for aircraft control process. It is not practical to mix media in the same facility due to the excessive cleanup required of different media. This project is required: (1) to increase fleet readiness through implementation of more efficient facilities capable of better workmanship and more environmentally friendly corrosion control processes, (2) to reduce operating costs, (3) to consolidate hygiene facilities, other employee support areas, and administrative areas with their associated corrosion control process, and (4) to reduce the NADEP's inventory of dilapidated, inadequate structures.</p> <p>CURRENT SITUATION:</p> <p>The existing facility housing the glass bead blast process was constructed in 1947 and is one of NADEP's oldest structures. It does not have required hygiene facilities or a ventilation system. The structure is too small to accommodate the NADEP's inventory of aircraft. The hangar doors have to remain open for many of the NADEP's aircraft due to the inadequate size of the facility. The NADEP's current air sampling results are above the level of the standard, thus requiring engineering controls. The NADEP's current method of media recovery requires the employees to sweep the media, which is not allowed, even if the air samples are allowable, since the media is contaminated with chrome. It is not economically feasible to alter this facility to meet current codes. The design of this facility is not suitable for its function and is not suitable for upgrade.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>NADEP will continue its glass bead blast process in a 1947 vintage structure that is too small for the aircraft it services, does not have</p>

10. Description of Proposed Construction				
Concrete pad with built-in automated rinse system with pressure activated treadle including timed shut-off, utilities, containment curb, catch basin, oil/water separator, and a concrete access from the taxiway.				
11. Requirement: <u>660 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>				
PROJECT:				
Construct an automatic, unattended, fresh water rinse facility along a taxiway at MCAS New River, North Carolina.				
Aircraft Rinse Facility = 660 m2 = 7,104 Square Feet (Current mission)				
REQUIREMENT:				
Provide an adequate Aircraft Rinse Facility capable of rinsing MCAS New River aircraft after over salt-water flights in order to minimize corrosion. Requirement ensures preservation of aircraft squadrons involved in 6 month training cycles preparing for deployment aboard amphibious ships.				
CURRENT SITUATION:				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: M62573 MARINE CORPS AIR STATION NEW RIVER, NORTH CAROLINA		
4. Project Title AIRCRAFT RINSE FACILITY	7. Project Number 528	
<p>(...continued)</p> <p>MCAS New River currently has one facility to provide fresh water rinse service to aircraft that have flown over salt-water. This existing undersized 60 foot wide, 1967-vintage rinse facility was built for H-34 helicopters (no longer in the inventory), contains only one row of 24 nozzles, and can only rinse half an aircraft at a time. Design criteria for H-1, CH-46, and CH-53 helicopters shows that New River rates a rinse facility that is at least 75 feet wide and has two rows of 24 nozzles. The new MV-22 aircraft arriving in FY 2000 will increase rinse facility requirements to 100 feet wide with two rows of 37 nozzles.</p> <p>The existing rinse facility is also located 10 feet from a wash rack which is used 10-14 hours a day to perform recurring soap and water washes of MCAS New River's 200+ aircraft. Both the wash and rinse facilities cannot be used simultaneously. After over salt-water flights, pilots taxi to the rinse facility and, if no wash operations are underway, drive over a pressure-activated treadle to automatically deluge their aircraft with fresh water and, with the help of the powerful downwash from their turning rotor blades, rinse the salt off. If the wash rack is being utilized, or if, as is often the case, there is a line of powered aircraft waiting to use the rinse facility, the wash operations are either halted to permit the rinses, or pilots pass their aircraft rinse requirements to the ground crews. In turn, ground crews revise maintenance plans to include an unscheduled aircraft wash (two-hour evolution) vice the more expedient rinse (5 minute evolution), a task which overburdens the already maximized contract wash operations.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without a dedicated rinse facility, aircraft returning from over salt-water flights will continue to either experience long delays while under power in getting their fresh water rinses, or they will frequently require unscheduled washes which will impede the efficient execution of contracted wash operations and perpetuate degraded aircraft availability and readiness.</p>

3. Installation and Location/UIC: M62573 MARINE CORPS AIR STATION NEW RIVER, NORTH CAROLINA		
4. Project Title AIR TRAFFIC CONTROL TOWER	7. Project Number 629	
<p>(...continued)</p> <p>Air Traffic Control Tower = 341 m2 = 3,670 Square Feet  Building = 321 m2 = 3,455 Square Feet  Emergency Generator Building = 20 m2 = 215 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequately and safely configured air traffic control tower at MCAS New River from which air traffic controllers can maintain constant supervision and visual contact with aircraft in the flight pattern and which will fit equipment upgrades from the National Airspace System Modernization Program.</p> <p>CURRENT SITUATION:</p> <p>Built in 1954, the existing inadequate air traffic control (ATC) tower is seriously undersized, unsafely and undesirably located, and excessively deteriorated.</p> <p>The current 70 square meter tower, built originally as a parachute loft, cannot fit the required manager's office, controller break room, communications room, electrical/mechanical room, elevator equipment room, or provost marshal rooms. Without tower area to house these functions, the tower cab, which is manned with 8 to 10 people at any given time, must be crammed with various pieces of equipment, administrative items, and personal gear. Consequently, air traffic controllers, who work under significant stress and ideally should be comfortable in order to stay at peak performance at all times, are forced to work in an unacceptably crowded and disorderly environment. The severe spacial inadequacies will be exponentially exacerbated when \$8M of new ATC systems upgrades procured by the Space and Naval Warfare Systems Center arrive.</p> <p>The existing tower is unsafely and undesirably located on the corner of a hangar on the flightline a quarter of a mile away from the preferred location next to the Radar ATC Facility. Worsened by a shorter than required tower (controller eye level in existing facility is 72 feet vice the needed 76 feet), the current location is unsafe because a water tank 1000' feet away blocks the line of sight view for controllers to the approach pattern for Runway 19 at a critical 3 miles out point. As a result, the air station operates under a NAVAIR airfield safety waiver for obstructions and must alter normal flight paths to compensate for the water tank. The current location is also undesirable because Facility Watch Supervisors cannot effectively manage operations at the Tower and at</p>

4. Project Title AIR TRAFFIC CONTROL TOWER	7. Project Number 629																	
<p>(...continued)</p> <p>the RATCF as required by NATOPS (NAVAIR 00-80T-114). Between the two facilities, equipment must be remoted and utilities interconnected under the flightline and runways, a situation which increases maintenance costs and prolongs response time for emergency maintenance.</p> <p>The 45-year old tower is heavily corroded and requires constant maintenance. Despite repairs, safety railings and access ladders are hazardous and the entrance stairway to the tower cab does not meet OSHA specifications. Cable entry ports must be sealed against rain with plastic sheets and sealing compound, and ongoing secondary structural problems such as the leaking roof, missing weather stripping, and crumbling concrete masonry blocks, continue to plague the tower occupants. Water invasion and out-of-date wiring have caused electrical fires and pose a serious risk for future fires, shock, and equipment damage. Deteriorated noise insulation in the tower cab inhibits controllers' ability to verbally coordinate when aircraft taxi near the tower.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Air traffic control operations at MCAS New River will continue to be conducted from an unsafe, undersized, and deteriorated facility which will threaten the safe control of flight operations, impair the effective training of student Air Traffic Controllers, and prevent the installation of new equipment upgrades.</p>

10. Mission Or Major Functions:

The Naval Underwater System Center is the principal Navy RDT&E Center for underwater weapons systems. It plans and conducts programs of warfare and systems analysis, RDT&E, and Fleet support in underwater warfare weapons systems and components, undersea surveillance systems, submarine communications systems, navigation and related sciences and technology. The Newport Headquarters Laboratory performs a wide variety of functions ranging from exploratory research through the in-service engineering assistance of

4. Project Title SHORE BASED LAUNCH FACILITY	7. Project Number 077	
<p>(...continued)</p> <p>Pier 170 Rehabilitation = 600 m2 = 6,458 Square Feet (Current mission)</p> <p><b>REQUIREMENT:</b></p> <p>Adequate and properly configured waterfront facilities to support launch and recovery of the Navy's development and test platforms for the Unmanned Undersea Vehicles (UUV) program. In 1993 Congress chartered the Navy to establish a program to develop and deploy a line of increasingly capable UUVs to support submarine and joint warfare operations in the littoral battlespace. UUVs will enable the warfighter to conduct selected missions in geographical regions which are either unsafe or politically unacceptable to employ submarine combatants. The program plan calls for four UUV missions: mine reconnaissance, anti-submarine warfare (ASW) surveillance, intelligence-surveillance-reconnaissance (ISR), and tactical oceanography. At the time the Navy plan was prepared and approved, it was believed that these missions could all be accommodated in a 21 inch diameter cylindrical vehicle, which can be deployed through submarine torpedo tubes. Mine reconnaissance is being only partially met with 21 inch diameter technology UUVs. Analyses and experimentation now show however, that significantly larger UUVs are needed to support the other required mission payloads. To provide an effective means for testing these emerging technologies, NUWC is developing the System Technology Development Vehicle (STDV) - a 35 foot by 15 foot, 8 ton non-cylindrical test bed. This vehicle will serve as the "work horse" with which all advanced UUV technologies will be sea tested for performance. The STDV will begin undergoing limited testing itself during FY 99 and will be ready for its first full-up integrated testing in FY 2001 - the year P-077 is needed. Additionally, during FY 2001, it is planned to begin developmental testing of a second large size experimental UUV in support of an Advanced Technology Demonstration (ATD) project. The STDV will continue in use as a component test bed for future UUV developments until at least 2010.</p> <p><b>CURRENT SITUATION:</b></p> <p>Larger vehicles cannot be launched or recovered in NUWC's current marine facility in the same manner as the current 21 inch diameter vehicles (lowered by crane onto a small range boat and driven to the test area). Their large size, heavy weight, and high cost pose a substantial cost and risk to one-of-a-kind vehicles, the loss of which could result in severe program setbacks and modifications. During development and testing the new UUV will require frequent movement between the laboratory and the at</p>

4. Project Title SHORE BASED LAUNCH FACILITY	7. Project Number 077																	
<p>(...continued)</p> <p>sea test area. P-077 will permit easy, risk free, and a secure means of launching and recovering the larger UUVs directly at the NUWC waterfront facility by means of a large UUV launch and recovery ramp. The availability of strategically placed jib cranes will permit much UUV work to be accomplished on the vehicles while they remain in the water. The practicality of ramp launch and recovery at remote locations where suitable ramps may be located (if any) is low due to the high costs, significant risk of damage during lengthy transport, and security reasons. NUWC's current marine facilities consist of a wharf (Pier 172) and two piers (Piers 170 and 171) which are old and deteriorated beyond economical repair. Their physical configuration is awkward and does not readily support the launch and recovery of the new STDV.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Systems analysis and experimental work conducted to date indicate that larger, heavier, non-cylindrical UUVs will be needed. These cannot be launched or recovered from NUWC Division, Newport's current marine facility. If P-077 is not provided in a timely manner, alternative UUV launch and recovery techniques that are excessively costly and risky will have to be utilized. This will result in a significantly lower number of vehicle tests being accomplished. This will also result in significant added costs, modifications to plans and projected performance capabilities, and continued safety and security problems.</p>

<p>(...continued)</p> <p>loops around hangars where they do not cross-connect with the domestic system.</p> <p>Flightline Fire Safety Improvements = 4,040 m = 13,254 Linear Feet  Water Distribution Pipeline (12") = 995 m = 3,264 Linear Feet  Water Distribution Pipeline (18") = 524 m = 1,719 Linear Feet  Water Distribution Pipeline (24") = 2,521 m = 8,271 Linear Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>A reliable, stand-alone fire protection system is required for the safeguard of eight aircraft hangars, 108 assigned aircraft, and personnel.</p> <p>CURRENT SITUATION:</p> <p>Marine Corps Air Station (MCAS) Beaufort currently has a joint flightline fire protection and domestic potable water system which shares piping and other components including a 500,000 gallon concrete underground storage tank. Constructed during the 1940's and during the 1955 base buildup, the potable water system was designed to have its water "pushed" to the station hangars via horizontal centrifugal fire pumps at the booster pumping station. However, the air station has had persistent problems with the existing booster pumping station because the pumps have repeatedly shut down during the station's operating life and have not maintained an acceptable water level in the underground storage tank. Even without a major fire event, water levels in the tank have been so low that MCAS Beaufort's Laurel Bay family housing complex experiences continuing pressure problems during peak use periods. In the mid-1970's, the Centrifugal Fire Pumps Code (NFPA 20) stopped approving the installation of systems like the one at MCAS Beaufort because horizontal fire pumps are not self-priming and are inherently unreliable. In September 1997, a Naval Facilities Engineering Command contracted analysis of MCAS Beaufort's potable water system validated that the current system is inadequate to handle high demand events (such as a major hangar fire) and that a completely new and separate fire loop and turbine booster pumps are needed to operate flightline facilities and hangar deluge systems. The study concluded that the age and condition of the domestic piping cannot reliably handle the pressure and shock of the fire pump activation, as evidenced by numerous water line failures which have occurred when the pumps were suddenly activated. Built in 1943, the underground storage tank has also deteriorated to the point that it is not structurally sound</p>

10. Description of Proposed Construction				
<p>Steel frame building on pre-stressed concrete pile foundations, sloped floor with fixed seating, high ceilings, acoustically treated walls and ceilings, raised stage with rear projection screen, public address system, fire protection system, concrete masonry unit exterior walls with brick facing, standing seam metal roofing, insulated walls and roof, heating, air-conditioning, and covered queing area for staging recruits and for inclement protection during bad weather. Supporting facilities include administrative spaces, appropriate restroom facilities, paving and site improvements, and utilities connections. Facility shall be designed to meet coastal windload criteria and Seismic Zone 3. Demolishes seven buildings. Renovates Crucible Aid Station to provide billeting for displaced Corpsmen due to demolition of existing structure for this project.</p>

3. Installation and Location/UIC: M00263 MARINE CORPS RECRUIT DEPOT PARRIS ISLAND, SOUTH CAROLINA		
4. Project Title FIELD TRAINING COMPLEX	7. Project Number 327	
<p>(...continued)</p> <p>11. Requirement: <u>1,124 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT: Constructs a central, consolidated operations/training facility for the Field Training Company to conduct Basic Warrior Training (BWT) for recruits.</p> <p>Field Training Complex = 1,124 m2 = 12,099 Square Feet  Field Training Complex = 903 m2 = 9,720 Square Feet  Recruit Staging Area = 221 m2 = 2,379 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate training and operations facility to conduct field instruction in individual combat skills and to coordinate the "Crucible" training exercise for one male recruit series and one female recruit platoon (340 recruits total).</p> <p>CURRENT SITUATION:</p> <p>MCRD Parris Island conducts field training for recruits at Page Field, an abandoned WWII airfield located about 6 miles from the main side of the base. Classroom instruction in this field training area is conducted in an inadequate wooden frame structure originally built as a warehouse in 1943. The building was later used as an auto hobby shop before it was finally converted into a classroom for recruits. Unsuitable for effective instruction, the building's structural supporting members and the flat, compartmentalized, and undersized configuration of the classroom prevent many recruits from seeing or hearing the instructors. In addition, the lack of insulation or air-conditioning does not provide an environment to train the packed room of 340 recruits and severely degrades the ability of the instructors to create an atmosphere conducive to learning. The deteriorated building, which does not comply with wind load and seismic zone 3 criteria, is also insufficiently sized to accommodate instructor office space, the "Crucible" command center, and gas chamber requirements. Thus, these latter functions are currently performed in converted metal storage sheds with window AC units, temporary mobile trailers, an inadequate "homemade" concrete block gas chamber, and scattered buildings within the field training area. Construction of this consolidated, state-of-the-art complex will reduce existing facilities through the demolition of the scattered, old, maintenance-intensive facilities currently used.</p>

10. Description of Proposed Construction					
<p>Two-story steel-frame building, with spread footing foundation, concrete floors, brick veneer, modified bitumen roofing on insulated metal decking, and steel joists with expansion wall; Sensitive Compartmented Information Facility (SCIF) construction, with associated Intrusion Detection System (IDS) for multiple program areas; will contain spaces for laboratories, analysis areas, scientific and technical support, program management, bulk storage room, presentation areas, work group rooms, classified document storage library, data communications equipment rooms, classified and unclassified data system networks and power systems; fire protection and alarm systems, special electronic grounding, heating ventilation and air conditioning (HVAC), direct digital control (DDC), backup generator, utilities, site development including storm water management, landscaping, parking, and sidewalks. Project includes demolition of 30,861 SF of temporary trailer space.</p>

<p>(...continued)</p> <p>11. Requirement: <u>6,507 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u></p> <p>PROJECT:</p> <p>Constructs a joint-use multi-program SCIF facility to support Navy Technology Initiatives including: the Navy Operations Other Than War (NOOTW) Technology Center, the Joint Program Office for Special Technology Countermeasures (JPO STC), and the Defense Counterdrug Technology Development Program (Navy is the executive agent for the JPO STC and the Defense Counterdrug Technology Development Program).</p> <p>Innovation Tech &amp; Infrastructure = 6,507 m2 = 70,041 Square Feet (New mission)</p> <p>REQUIREMENT:</p> <p>Adequate and properly configured, collocated and integrated technical research space in a SCIF facility is required to support these national and Navy technology programs with spaces for laboratories, analysis areas, scientific and technical support, and program management.</p> <p>The Secretary of the Navy (SECNAV) sponsored NOOTW Technology Center is the Navy focal point and clearing-house for concepts and technologies that can be applied to non-war operations. The NOOTW Technology Center is chartered to identify, evaluate, and catalog concepts, technologies, and methodologies that can support NOOTW missions, and develop NOOTW concepts and assess feasibility. The NOOTW programs use and exploit rapidly evolving technology advances, and the Center facilitates the leveraging of technology for the benefit of the Navy through coordination and teaming with other programs. OOTW is an area of increased Navy emphasis and responsibility in the foreseeable future. To effectively execute the program requires adequate collocated and integrated technical research space to bring in personnel from across the Navy to appraise emerging technology advances that run the gamut of security classifications.</p> <p>CURRENT SITUATION:</p> <p>Both the JPO STC and the NOOTW Technology Center are currently housed in temporary relocatables (trailers). Current space is congested, inadequate, and does not accommodate integration of technology to support planned requirements. These temporary facilities are not adequate for long term use as a SCIF, have a high maintenance cost, and cannot accommodate the future growth of program requirements. Condition of the</p>

10. Description of Proposed Construction					
<p>Construction consists of a concrete masonry structure with brick veneer, pile supported foundation, and modified bituminous roof. Project includes heating, ventilation, and air conditioning systems, domestic water system, sanitary fixtures, electric service and distribution equipment, interior lighting, emergency generator, closed circuit TV system for pier observation, telephone, fire alarm and sprinkler systems. The Waterfront Operations Facility will include administrative spaces for Port Operations staff, observation tower, locker/shower area, publications library, departmental supply storage, classroom, duty crew male and female bunkrooms, and a crew's lounge. The building includes a tool issue room, bosun's locker, hazardous material locker, fuel storage tank, and a storage area for boat gear and oil spill equipment. This project also provides parking, utilities, area lighting, site improvements, landscaping, relocation of existing boat lifts, and demolition of seven buildings.</p>

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N61414 NAVAL AMPHIBIOUS BASE LITTLE CREEK, VIRGINIA		
4. Project Title WATERFRONT OPERATIONS BUILDING	7. Project Number 371	
<p>(...continued)</p> <p>11. Requirement: <u>1,386 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u></p> <p>PROJECT:</p> <p>Project constructs a new Waterfront Operations Facility by the intersection of Guadalcanal Road and Fairfax County Road, and upgrades physical security within the harbor.</p> <p>Waterfront Operations Building = 1,386 m2 = 14,919 Square Feet  Waterfront Operations Building = 1,013 m2 = 10, 904 Square Feet  Port Control Office/Tower = 373 m2 = 4,015 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate facilities are required to provide waterfront operations support for 28 homeported amphibious ships. The Port Operations function also includes providing physical security within the harbor, and serves as an alternate command and control center for force protection.</p> <p>CURRENT SITUATION:</p> <p>The Port Operations functions are currently housed in seven, 40 year old facilities located less than 300 feet from the Ammunition Loading Berth, in violation of Navy explosives safety criteria. The Navy's Explosive Safety Criteria Manual (OP-5) requires inhabited buildings to have a separation distance of at least 1,250 feet from ammunition handling areas. Approximately 107 personnel are working in this explosives hazard area under a waiver.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>All ordnance loading evolutions at NAVPHIBASE Little Creek will come to a halt if the waiver is withdrawn. Ships homeported at NAVPHIBASE Little Creek will have to load ammunition at either Naval Station Norfolk or Yorktown Ammunition Depot. Recently, Port Operations conducted 33 ammunition loading evolutions during an 11 month period.</p> <p>Due to fuel consumption required for loading ammunition at these sites, fleet units homeported at NAVPHIBASE Little Creek will lose one "at sea" day per ordnance handling evolution (which equates to 33 lost training days based on the time frame above).</p>

10. Description of Proposed Construction					
<p>Construction of an extension to parallel taxiway F. The taxiway will be 22.86m wide and include necessary fill material, a stone base 305 millimeters thick and non-reinforced concrete 356 millimeters thick with doweled longitudinal joints, 3.81m paved shoulder, a Visual Guidance Lighting System (SSALS) on the last 427 meters of the runway, new taxiway lights on the new taxiway extension, repairs to existing lights on the runway and taxiways, and replacement of the existing airfield lighting vault and regulators. Demolition of one building.</p>					
11. Requirement: <u>21,468 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>					
PROJECT:					
<p>The project extends the existing partial south side parallel taxiway to create a full length taxiway for use by the aircraft transiting to and from the south side of the airfield, and provides new approach lighting system and repairs to runway threshold, centerline, edge and taxiway lights.</p>

3. Installation and Location/UIC: N00188 NAVAL AIR STATION NORFOLK VIRGINIA		
4. Project Title TAXIWAY EXTENSION AND LIGHTS	7. Project Number 113	
<p>(...continued)</p> <p>Taxiway Extension and Lights = 21,468 m2 = 231,080 Square Feet  Extend Taxiway F = 16,431 m2 = 176,862 Square Feet  Shoulders = 5,037 m2 = 54,218 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>A full-length south side taxiway is needed to provide separation of ordnance laden aircraft from the passenger terminal by providing direct access to/from both ends of the runway, and alternate access to the air cargo/air passenger terminals and the ordnance storage facilities on the south side of NAS Norfolk. Requirements for approach lights are based on Navy and Federal Aviation Administration (FAA) criteria.</p> <p>CURRENT SITUATION:</p> <p>NAS Norfolk supports 15 Fleet and Reserve squadrons, and air passenger and air cargo operations. Aircraft operating from the south side, which are often returning from the ordnance handling pad laden with ordnance, do not have direct access to the opposite end of the active runway and must either: (a) cross the active runway to gain access to the full length north side taxiway, which increases the possibility of a collision, or (b) taxi through the highly congested air cargo / air passenger parking aprons, and an indirect series of taxitracks to the other end of the primary runway. Aircraft movement through the convoluted southern route conflicts with both air cargo and air passenger operations and creates additional risk of aircraft accidents. The tempo of air cargo and air passenger flights has increased significantly over the past few years due to the closure of the Air Mobility Command (AMC) in Philadelphia. The Air Passenger Terminal is a major East Coast AMC hub which handles in excess of 150,000 passengers per year and 25,401 metric-tons of cargo annually. To accommodate the increased air passenger demand larger aircraft are being used on overseas flights. This increases the potential for larger numbers of casualties in the event of an accident.</p> <p>The ambient lighting from the piers and surrounding buildings, and Interstate 564 makes it more difficult for pilots to clearly distinguish the airfield from the surrounding area and delays final visual acquisition of the runway. The addition of the approach lighting system to Runway 28 will greatly improve all pilots' ability to find the runway at night and during severe weather conditions. Commercial pilots will benefit from the approach lights, since they do not fly precision radar approaches. The existing lighting vault is in the runway clear zone, in violation of FAA</p>

3. Installation and Location/UIC: N00188 NAVAL AIR STATION NORFOLK VIRGINIA																												
4. Project Title TAXIWAY EXTENSION AND LIGHTS	7. Project Number 113																											
<p>(...continued)</p> <p>criteria. The lighting regulators require a voltage that is obsolete, and they are unsafe and difficult to maintain.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without a full-length taxiway on the south side, large cargo aircraft and ordnance laden aircraft from the ordnance loading area will continue to taxi through the air passenger terminal passenger loading areas to reach the taxiway or taxi across the active runway. Both of these options create safety hazards.</p> <p>The Air Passenger Terminal has increased the night flights to NAS Norfolk and over fifty percent of the approaches are instrument approaches. The failure to install the approach lights increases the chance of accidents. Failure to repair existing lights could force the runway to close for repairs if they fail or result in an accident if the lights fail during a landing.</p>

10. Description of Proposed Construction

Construct a one module, Type I Modified Aircraft Maintenance Hangar on reinforced concrete pile foundation. The project will also construct 3,303 m2 of taxiway and 18,152 m2 of parking apron and overlay 73,847 m2 of existing parking apron with Resin Modified Paving. Construction features for the hangar will consist of reinforced concrete floors, metal frame and Concrete Masonry Unit (CMU) block walls, steel-trussed ceiling, built-up roofing, fire sprinkler system in administrative areas and Aqueous Film Forming Foam (AFFF) sprinkler system in the hangar bays, and two 6804 Kg bridge cranes. Height of the hangar will be increased to accommodate E-2C planes. The hangar module will contain administrative, equipment and hangar space. Additional items include utilities (electrical and mechanical), site improvements, 400 Hz D.C. power

3. Installation and Location/UIC: N00188 NAVAL AIR STATION NORFOLK VIRGINIA		
4. Project Title AIRCRAFT MAINTENANCE HANGAR	7. Project Number 522	
<p>(...continued)</p> <p>distribution system, compressed air system, air conditioning and heating of personnel administrative spaces, and state of the art energy savings equipment; demolition of seven buildings and associated asbestos removal; new parking apron and overlay of existing parking apron for E-2C planes and new parking for 100 vehicles; demolition and relocation of calibration Pad LP67.</p>		
<p>11. Requirement: <u>OLS</u> Adequate: <u>OLS</u> Substandard: <u>OLS</u></p> <p>PROJECT:</p> <p>This project will construct a one module, modified Type I Aircraft Maintenance Hangar for VAW 123 and 124.</p> <p>Maintenance Hangar = 3,608 m2 = 38,836 Square Feet Taxiway, Parking Apron, Overlay = 95,302 m2 = 1,025,822 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate space is required for the squadrons VAW 123 and 124. The Naval Air Station is tasked to support the Airborne Early Warning Squadrons VAW 123 and 124, which are located in a WWII maintenance hangar in the (SP) area of the Naval Air Station. The Naval Air Station has a requirement for 37,881 m2 of Type I Maintenance Hangars. Nine hangars are planned for demolition in a long range Hangar Master Plan, due to structural deterioration, inefficient floor plans and hangar location. Replacement of these hangars has been approved in the master plan for NAS Norfolk by Chief of Naval Operations (CNO). This project along with P-523, P-524, and P-525 will complete the hangar replacement.</p> <p>CURRENT SITUATION:</p> <p>The existing LP hangars were originally designed to support fixed-wing, reciprocating engine aircraft, and lack the facilities necessary to perform maintenance and hands-on maintenance training in support of the more sophisticated aircraft of the squadrons currently housed in the hangars. These hangars and three hangars in the SP area are planned for demolition because they cannot be made adequate economically. Dependency on computers for records, mail and training is increasing, but electrical power is not sufficient. In SP1, which houses the VAW 123 and VAW 124 squadrons, the roof boards have been replaced in sections, but rainfall inside the hangar is measurable. There are no cranes inside the hangar for removal of the E-2C dome. The floor is buckling and there are rainwater</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																								
3. Installation and Location/UIC: N00188 NAVAL AIR STATION NORFOLK VIRGINIA																										
4. Project Title AIRCRAFT MAINTENANCE HANGAR	7. Project Number 522																									
<p>(...continued)</p> <p>puddles in the hangar. The concrete floor is being patched with asphalt, but asphalt will not stand up to the aircraft weight and jet fuel. The maintenance backlog on SP1 is \$5,000,000. SP is typical of all the WWII hangars. The VAW squadrons in the SP area are an operational hazard because they must taxi across Bellinger Blvd., a main automobile traffic corridor traversing the airfield. The overlay in the project is to correct a parking apron that was the subject of a Naval Aviation Hazard Report dated 6 Nov 97. Some of the parked aircraft penetrate runway clearance surface requiring airfield safety waivers. The demolition of LP2, LP6, LP7, LP12, LP27 and LP28 will free up parking apron to eliminate this waiver.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Old, inadequate and inefficient WWII hangars will continue to be used for maintenance of expensive Navy aircraft. Shortages in aircraft hangar space will become more severe. There will continue to be shortages in parking apron.</p>

(...continued) vehicles.		
<p>11. Requirement: <u>7,215 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT: Constructs an aircraft maintenance hangar.</p> <p>Aircraft Maintenance Hangar = 7,215 m2 = 77,662 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate space is required to support the NAS Norfolk Hangar Plan requirements for maintenance hangar space and aircraft parking apron. NAS Norfolk has a total requirement for 36,080 m2 of Type I hangar space. This project will construct a double module, Type I hangar for the helicopter squadrons HC-2 and HCS-4. This project will demolish 11,130 m2 of inadequate hangar space. A parking apron deficiency in the LP apron will be corrected by this project. This is an airfield recapitalization investment project to support current mission requirements. This project is the third of five projects and the first project in the SP area, which will complete the NAS Norfolk Hangar Plan.</p> <p>CURRENT SITUATION:</p> <p>NAS Norfolk has nine WWII maintenance hangars designed for aircraft no longer used by the Navy. These hangars are beyond economical repair and need to be replaced. The electrical panels in these hangars are no longer manufactured. Numerous electrical violations exist in these hangars. An insufficient amount of electrical power exists, which reduces the number of computers and fax machines that can be used and increase the risk of damage to computers and repair equipment. These electrical problems cause delays in receiving parts, longer training time and delays in maintenance. The configuration is not compatible for the space requirements of today's squadrons, resulting in the use of line shacks outside the hangars. One hangar, SP1 is in the process of being permanently closed due to safety concerns. SP1 is typical of these hangars, and several other hangars are reporting hazardous conditions. In LP2, the existing two 225KVA 120/208volt transformers do not have sufficient power to support new frequency converters and motor generator sets. To be made adequate, all of these hangars require a complete renovation. In SP1, which houses squadrons VAW 123, 124, 125, and 126, the roof boards have been replaced in sections, however rainfall inside the building from both the roof and</p>

3. Installation and Location/UIC: N00188 NAVAL AIR STATION NORFOLK, VIRGINIA																														
4. Project Title AIRCRAFT MAINTENANCE HANGAR	7. Project Number 524																													
<p>(...continued) windows is plentiful.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Continued use of these hangars will require emergency repairs and costly utility bills (due to the large footprints). The loss of hangar SP1 will severely limit the capability of the VAW squadrons to remove the dome from their plane. Maintenance time will be lengthened, as aircraft need to wait for an available hangar space with the crane and required ceiling height to remove the domes. Failure to replace these hangars also increases the threat to personnel from falling roof boards and electrical shock, and will increase damages to aircraft and equipment. Failure to implement the Hangar Plan will require E-2C aircraft to taxi across Bellinger Blvd., an automobile traffic corridor traversing the airfield. Not only does this waste time and fuel, but this causes an operational hazard.</p>																														
<p>12. Supplemental Data:</p> <p>A. Estimated Design Data: (Parametric estimates have been used to develop project costs. 10. Description of Proposed Construction				
<p>This project provides enhancements to Berthing Pier 21 to include: dredging to a depth of 12.2m (+/-0.6m) 131.3 square feet to provide sufficient depth for Deep-Draft, Power-Intensive ships; demolition of Pier 22 and acquisition and installation of four additional weatherproof enclosed 4000 kVA skid-mounted secondary unit substations.</p>				
11. Requirement: <u>  0LS  </u> Adequate: <u>  0LS  </u> Substandard: <u>  0LS  </u>				
PROJECT:				
<p>This project will demolish Pier 22, dredge pier approach and ship berthing areas to a depth sufficient to accommodate deep-draft surface ships and acquire and install additional electrical substations to support berthed ships. (Current mission)</p>				
REQUIREMENT:				
<p>The comprehensive Regional waterfront Plan for the Hampton Roads region requires berthing for ship loading of 89 ships and utilizing ship nesting. The project will provide necessary additional electrical utilities, dredging at Pier 21 and the demolition of Pier 22 to provide efficient and safe general purpose berthing capability in support of the U.S. Atlantic Fleet.</p>				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62688 NAVAL STATION NORFOLK, VIRGINIA		
4. Project Title PIER ENHANCEMENTS	7. Project Number 099A	
<p>(...continued)</p> <p>CURRENT SITUATION:</p> <p>Pier 22 is inadequate and needs to be demolished as it encumbers the Pier 21 ship maneuver and berthing areas. Pier 22 deficiencies include structural limitations and inadequate deck access and laydown areas to support current and future ship berthing operations. Upon completion, Pier 21 will have adequate structural capacity and deck area but will lack sufficient electrical substations to allow maximum utilization of its ship berthing capability. Dredge depth will be sufficient for older classes of surface compantants but will be insufficient for modern deep-draft, power-intensive ships. Pier 22 must be demolished to allow utilization of Pier 21's north side berthing areas.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If this project is not completed, requirements of the Regional Waterfront Plan will not be met. Recapitalization goals of the region's waterfront will be delayed. Full utilization of Pier 21 will not be realized without additional electrical utilities, dredging and the demolition of Pier 22.</p>

10. Description of Proposed Construction				
<p>Pavement upgrades and repairs to Portland cement concrete (PCC) runways and taxiways (partial and full-depth slab replacement, base course removal and replacement, crack sealing, and joint repair and resealing); upgrades/repairs to asphalt surfaced pavements (milling and applying an asphalt overlay); and repainting of disturbed pavement markings on repaired pavements. Miscellaneous runway lighting repairs at isolated locations involves resetting light bases, replacing wiring and fixtures.</p>				
11. Requirement: <u>394,858 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u>				
PROJECT:				
Provide critical repairs to Runway 14R/32L, Runway 14L/32R and two primary taxiways.				
Airfield Improvements = 394,858m2 = 4,250,216 Square Feet				
Rehabilitate Runway & Hold Areas 14R/32L = 202,745 m2 = 2,182,329 Square Feet				
Rehabilitate Runway & Hold Areas 14L/32R = 120,007 m2 = 1,291,745 Square Feet				
Repair Taxiway 5 = 60,923 m2 = 648,988 Square Feet				
Misc Repairs to Taxiway 14 & Taxiway C = 11,183 m2 = 120,373 Square Feet				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N60191 NAVAL AIR STATION OCEANA, VIRGINIA		
4. Project Title AIRFIELD IMPROVEMENTS	7. Project Number 758	
<p>(...continued) (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate runway and taxiway pavements are required to accommodate the mission of Naval Air Station Oceana in maintaining Fleet readiness as a Master Jet Base. Specific pavements require improvements to maintain their surface condition (PCI). Pavements require strengthening to support the anticipated day-to-day aircraft traffic for the next 20 years.</p> <p>CURRENT SITUATION:</p> <p>These airfield pavements have deteriorated due to a combination of factors: pavement age, high usage (the repeated loading from tactical aircraft having high tire pressures and from increased numbers of heavy transport aircraft), pavement subgrade failure due to overloading, and isolated locations of latent construction defects and damage from freeze/thaw cycles. Deteriorating pavement surface conditions on Runways 14L and 14R and taxiways present a significant Foreign Object Damage (FOD) hazard to operating aircraft. Ingesting fragments of pavement or joint sealant can severely damage or destroy an aircraft engine, and FOD is a constant threat to the safety of aircraft, pilots, air crews and civilian populations.</p> <p>In FY98, 24 Oceana based aircraft engines were FOD-ed from external sources: concrete, asphalt, joint sealant, etc. In FY-98 the Navy spent \$1,647,551 for the repair of aircraft engines damaged by debris from deteriorated pavements at NAS Oceana.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If this project is not provided, NAS Oceana airfield pavements will continue to deteriorate. The potential for Foreign Object Damage (FOD) to operating aircraft will increase dramatically. Personnel safety will be jeopardized while the aircraft is in flight, landing/taking-off, and undergoing maintenance. Unsuitable pavement conditions may dictate pavement areas be closed unexpectedly, preventing the support of assigned squadron aircraft, transient aircraft and cargo aircraft. Runways, Taxiways and Aircraft Parking Apron pavements are MISSION ESSENTIAL, CORE INFRASTRUCTURE for a Master Jet Base. In addition, closed pavement areas severely impact the airfield operational mission and increase the emergency response times in the event of an airfield emergency. Runway</p>

10. Description of Proposed Construction				
<p>Construct a multi-story interior corridor bachelor enlisted quarters with concrete pile foundations, slab on grade, brick Concrete Masonry Unit (CMU) exterior walls, terne-coated stainless-steel roof and downspouts. The facility will consist of 100 "2 + 0" modules transient quarters, with semi-private heads and private closets. The structure will include high efficiency central heating/air conditioning, telephone and local area network (LAN) cable, elevators, fire alarm system, sprinklers with fire pump, and utilities. Core area will include lobby, administrative services, activity spaces, telephone cubicles, laundry, and vending area, electrical and mechanical utilities, landscaping with irrigation systems and parking. Provide brick courtyard area and a volleyball court. Demolish one building for parking. Special construction features include pile foundations and force protection.</p> <p>Intended utilization: 356 (312 E1-E4 and 44 E5-E6); Maximum utilization: 400 (E1-E4).</p> <p style="text-align: right;"><i>(Continued On DD 1391C)</i></p>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00181 NORFOLK NAVAL SHIPYARD PORTSMOUTH, VIRGINIA		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 504	
<p>(...continued)</p> <p>11. Requirement: <u>4,310 PN</u> Adequate: <u>1,289 PN</u> Substandard: <u>0 PN</u></p> <p>PROJECT:</p> <p>Construct a new multi-story transient bachelor enlisted quarters within the secured boundaries of the Norfolk Naval Shipyard.</p> <p>Bachelor Enlisted Quarters = 9,790 m2= 105,379 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate housing is required for transient personnel during ship overhaul. Norfolk Naval Shipyard modernizes and repairs all class of Navy ships and submarines. Enlisted crew must have adequate housing while ships are in overhaul. The shipyard currently has a large deficiency of BEQ spaces to support workload. There's a requirement for 1398 E1-E4 transient beds, 2240 E5-E6, and 672 E7-E9 transient beds. The shipyard plans to meet its enlisted personnel housing requirement through existing BEQ replacements and new construction. This project is the second phase of the NNSY BEQ Phasing Plan. This project is consistent with the Regional One plus One Transition Plan for Norfolk Naval Shipyard.</p> <p>CURRENT SITUATION:</p> <p>The shipyard currently has a deficiency of quarters for transient enlisted military personnel. The deteriorated living conditions faced by crews remaining on-board ships during overhauls are demoralizing and disruptive to shipboard routine. Frequent interruptions of heat, air conditioning, steam, water, and electrical services combined with a generally noisy, dirty environment render many shipboard areas uninhabitable. During ship overhauls sailors are housed in quarters in the shipyard, in lease spaces in the Plymouth area, or on berth barges. The west wing of building 1439 (Dale Hall) is currently used to house transient sailors in the shipyard. The East wing was closed in FY96 due to its condition, and the entire building is listed as inadequate and is scheduled for demolition and replacement in Military Construction Project P-508, BEQ Replacement. Leasing rooms in the area requires a long lead time for approximately 544 individuals, which may not be available in one location. Providing transportation to and from hotels is a major cost and is not economically feasible to the Navy. Barges are only used if no other option is available.</p>

4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 504																															
<p>(...continued)</p> <p>IMPACT IF NOT PROVIDED:</p> <p>If this project is not accomplished, contract with local hotel establishments or the use of berthing barges will be necessary to provide living spaces for enlisted personnel. This will result in personnel being house in different locations or in inadequate conditions, which will adversely affect morale and camaraderie. There will continue to be a large deficiency of bachelor enlisted housing and existing egregious conditions will continue to erode and undermine the Navy's Quality of Life Program for military personnel.</p>

10. Description of Proposed Construction					
<p>Single story building constructed with structural steel column framing, steel truss roof structure with rigid insulation and seamless steel roof system, reinforced foundations, slab grade, exterior masonry walls with brick face veneer, fire protection system, heating/ventilation/air conditioning system (HVAC), utilities, paving and site improvements, parking, and force protection features. Indoor features of facility include SEMPER FIT health promotion and wellness areas, basketball/volleyball/racquetball/handball courts, a fitness area, an aerobic room, male/female/family locker areas, a multi-purpose activity area, a combative/martial arts room, and staff administrative, storage, and service spaces. Demolishes one building. Building will be constructed per the Quantico Base Exterior Architectural Plan (BEAP).</p>

<p>(...continued)</p> <p>11. Requirement: <u>5,292 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p>PROJECT:</p> <p>Constructs an indoor fitness facility to support the physical training requirements of 7,378 Marines and Sailors attached to Marine Corps Base (MCB) Quantico, Virginia.</p> <p>Physical Training Facility = 5,292 m2 = 56,963 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and properly configured facilities to provide quality physical training, fitness development, and health promotion for the military population and their dependents at MCB Quantico, VA.</p> <p>CURRENT SITUATION:</p> <p>Currently, MCB Quantico's physical fitness services are provided in a deteriorated 1942-vintage Sea-Plane hanger which also houses the Marine Corps Air Facility (MCAF) Crash Crew and Refueler Maintenance Shop, the Presidential Helicopter Squadron's Ground Support Equipment Shops, and the Marine Corps Air-Ground Museum Restoration Shop. The hangar is an inadequate facility isolated from the mainside enlisted barracks and work areas, and it lacks adequate heating, ventilation and air conditioning. Unsuitable for fitness activities, the hangar is frequently inundated with motor vehicle exhaust and paint fumes generated by other building tenants. Water from roof leaks seep into the physical training areas and threaten the health and comfort of personnel exercising. The facility also contains highly flammable materials, lacks adequate fire protection and does not meet current building Life/Safety Codes.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Physical training services will be severely inhibited within the overcrowded, inadequate and unsuitable facility. Lack of adequate support facilities has a direct, harmful impact on the morale and the physical well-being of Marines and their dependents assigned to MCB Quantico.</p>

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N45534 AEGIS COMBAT SYSTEMS CENTER WALLOPS ISLAND, VIRGINIA		
4. Project Title SPY-1D TEST AND EVALUATION FAC ADDITION	7. Project Number 002	
<p>(...continued)</p> <p>simulated ship-board environment for the next generation radar, which is adjacent to the Virginia Capes Operating Area (VACAPES OPAREA) for operational interaction with high-performance military aircraft targets, future AEGIS destroyers (DDG 91 and beyond), and other surface combatants. The new radar is scheduled for delivery to ACSC in May of 2001 and operational in October 2002 with first ship board installations scheduled in FY 03. Initial operating capability in October 2002 is critical in order to have an operational platform for engineering and performance testing adjacent to the existing combat system equipment already in-service at ACSC Wallops Island and in the adjacent off-shore operational areas.</p> <p>CURRENT SITUATION:</p> <p>The current facilities at Wallops Island ACSC can only support AEGIS training, lifetime support engineering, and in-service engineering of the AEGIS Combat System baselines 1 through 6. These six baselines contain over 30 unique variations with the SPY-1A and SPY-1B radars. Current SPY variants cannot be removed from the existing deckhouse because they are required to support ships in the fleet. The existing deckhouse cannot house the SPY-1D operations and training suite due to space constraints.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>ACSC will not have the capability to provide the two basic functions of its mission: (1) operational training to new and replacement crews, and (2) integrated lifetime engineering and logistics support of the new SPY-1D combat system. This training comprises 90% of ACSC's mission. Inability to simulate problems being experienced in the fleet will severely hamper engineering of software solutions, which will need to be solved at sea and may cause ships systems to be down while underway. Unproven software will be tested on ships at sea; this situation will result in a reduction of fleet readiness due to the uncertainty of performance. In addition, equipment at a cost of \$61 million will be delivered to ACSC and there will be no facility in which to install it.</p>

4. Project Title PIER REPLACEMENT (INCREMENT I)	7. Project Number 341	
<p>(...continued)  within the western area of the Shipyard; technical operating manuals;  demolition of existing Pier D.</p>		
<p>11. Requirement: <u>18,288 M2</u> Adequate: <u>0 M2</u> Substandard: <u>6,210 M2</u></p> <p>PROJECT:</p> <p>This project replaces the existing pier with a pier that will have the required structure and utilities capable of supporting all types of Navy ships and specifically a homeported nuclear aircraft carrier (CVN) and 4 homeported Fast Combat Support Ships (AOEs).</p> <p>Pier Replacement = 18,288 m2 = 196,850 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate facilities are required to support the USS Carl Vinson (CVN 70). Adequate structural capacity is required to support Shipyard's berthing operations and mooring loads from two CVNs simultaneously. Replacing Pier D would enhance the flexibility of the Shipyard to moor a wide range of ships in the base support area as necessary to serve the Fleet. Major modifications are required to increase upland utility system capacity to meet requirements placed on them by the ships either in homeport status or availability status. Electrical supply is required to support a maximum of 3 CVNs at the west end of the Shipyard (both sides of new Pier D, one industrial pier, and one dry dock).</p> <p>Puget Sound Naval Shipyard serves as homeport to one CVN, two CGNs, and four AOEs. In addition to this homeport loading, the Shipyard's forecast of annual ship loading in support of industrial work is: one carrier, one combatant or auxiliary surface ship, one submarine in overhaul and six submarine inactivations and/or disposals (recycling).</p> <p>The CVN Drydocking Planned Incremental Availability(s) (DPIA) scheduled for FY02 require the Shipyard to provide a primary and a secondary homeport berth for the current loading of CVNs. The west side of Pier B is currently the primary CVN homeport berth, as well as a repair berth used for the completion of DPIAs. Pier B has served as the interim homeport for the USS Nimitz (CVN 68) while often doubling as an overhaul pier for CVNs completing a docking availability. The assignment of five CVNs to the westcoast requires Drydock 6/Pier B complex to become a dedicated repair DPIA pier.</p> <p>CURRENT SITUATION:</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00251 PUGET SOUND NAVAL SHIPYARD BREMERTON, WASHINGTON		
4. Project Title PIER REPLACEMENT (INCREMENT I)	7. Project Number 341	
<p>(...continued)</p> <p>Pier D is currently the secondary CVN homeport berth. When Pier B becomes a repair pier, the west side of Pier D will become the primary homeport berth and the Shipyard will be left without a secondary homeport berth for the CVN.</p> <p>The Shipyard presently has two substandard piers capable of mooring a CVN, Piers D and B, since neither pier complies with homeporting criteria. Their dimensions do not provide adequate turn-around space for vehicles (emergency vehicles and trucks included), limits pier traffic, and complicates operation of all weight handling equipment on the pier. Equipment and supply loading operations are severely restricted and require extended time periods. The current pier can only support one loading operation at a time. The narrow pier restricts fire and emergency vehicle access, resulting in potential safety problems. Structural capacity of the pier limits large vehicle traffic and severely limits operation of mobile cranes. Structural capacity to resist wind and mooring loads placed on the pier by CVNs is also marginal. Mooring bollards on the pier currently do not meet required load ratings. Utilities at Pier D are minimally adequate to support a homeported CVN. Utilities on the west end of the Shipyard, electrical service in particular, cannot meet demands when serving several ships moored at various piers. Operational restrictions are occasionally placed on ships to avoid exceeding system capacity. Major modifications are required to these systems to increase capacity to meet the requirements for ships using west end piers and facilities. Utility systems are either on the deck and interfere with operations or are under the deck and therefore are immersed in salt water and require frequent maintenance and replacement.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The Shipyard will fail to provide an adequate berth for a permanently homeported CVN. When Pier B becomes a dedicated repair pier, the west side of Pier D will become the primary CVN homeport berth and, without this project, no secondary berth would be available. Because of the limited number of CVN berths, there will be situations when the Shipyard will have to relocate a CVN during a DPIA which will cause the Shipyard to incur additional costs due to the additional production work to relocate the ship.</p>

4. Project Title OILY WASTEWATER COLLECTION	7. Project Number 343	
<p>(...continued)</p> <p>cruisers (CGN), and four fast combat support ships (AOE). The Shipyard also supports ships in overhaul; a typical complement is one carrier, one combatant or auxiliary surface ship, one submarine in overhaul, and six submarine inactivations and/or disposals (Recycling). In April 1991, Chief of Naval Operations directed that Waste Oil Rafts (DONUTs) be eliminated as soon as possible to eliminate potential Clean Water Act liability and enhance the environmental posture of the Navy. DONUTs were eliminated at Puget Sound Naval Shipyard in January 1997. A consequence of this action is increased costs, complexity, and risks associated with handling the additional volume of bilge water via hoses connected to skid mounted treatment plants, tanker trucks, and barges. The Clean Water Act regulates effluent discharges into the navigable waters of the United States. Title 40 of the Code of Federal Regulations, Section 112 establishes procedures, methods, and required equipment to prevent oil spills. The new piping system will comply with federal and state regulations and provide an efficient and environmentally enhanced means of transferring bilge and ballast water for treatment and disposal. This is a continuation of the work started under FY95 MCON P-240.</p> <p>CURRENT SITUATION:</p> <p>Ship bilge water is pumped to a ship waste oil barge (SWOB) positioned alongside the ship. Once full, the barge is moved to one of the oily water treatment systems where bilge water is off-loaded and processed. This complex sequence of events is costly and can result in spills. Spills can occur during vessel off-loading, barge transport, and transfer to the treatment system. With similar complexity and risks, tanker trucks, portable storage tanks, and temporary hose systems are also used to transport bilge water. The treated water is discharged to the sanitary sewer system and the reclaimed oil is recycled. The Shipyard has averaged three significant bilge water related spills each year. Each spill violates the Clean Water Act, resulting in reduced public confidence in the Navy and jeopardizes operational flexibility. Annual operating expenditures are high due in part to maintenance and replacement costs for the large inventory of hose and portable pumps required for existing operations. Current operations also require many personnel to monitor hoses and equipment during transfer operations to reduce the risk of spills.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Naval Shipyard Puget Sound will continue to use temporary hoses, barges, tanker trucks, and portable tanks for transporting these large quantities</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00251 PUGET SOUND NAVAL SHIPYARD BREMERTON, WASHINGTON		
4. Project Title OILY WASTEWATER COLLECTION	7. Project Number 343	
<p>(...continued)</p> <p>of bilge water at a high cost with an inherent and unacceptable high risk of spills and leaks. The Shipyard would continue to experience significant spills per year and continue to incur high expenditures for maintenance and operations. Noncompliance with the Clean Water Act and Federal Regulations governing oil spill prevention could result in injunctions issued to the Shipyard, curtailing or halting critical work.</p>

10. Description of Proposed Construction				
<p>Renovation, modernization and conversion of an existing historic building to a new Chemical and Metallurgical Analysis Facility including demolition of the north third of Building 59, seismic upgrade of the remaining portion of the building (foundation upgrade, roof membrane replacement, interior steel k-bracing, exterior brick repointing and mortar repair), upgrades for fire protection and other life safety issues, upgrade of electrical and other utilities to current code standards, installation of heating, ventilation, and air conditioning system (HVAC) to include special heating and ventilation modifications, installation of lab benches, sinks and special plumbing to support the laboratory functions and elevator repair and refurbishment; demolition of seven facilities; removal and disposal of any contaminated materials that may be encountered during rehabilitation and demolition; relocation and installation of plant and collateral equipment from the existing Chemical and Metallurgical buildings into the new facility; and technical operating manuals.</p>				
<i>(Continued On DD 1391C)</i>				

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N00251 PUGET SOUND NAVAL SHIPYARD BREMERTON, WASHINGTON		
4. Project Title CHEMICAL METALLURGICAL LABORATORY	7. Project Number 416	
<p>(...continued)</p> <p>11. Requirement: <u>2,907 M2</u> Adequate: <u>0 M2</u> Substandard: <u>0 M2</u></p> <p>PROJECT:</p> <p>Provides an efficient Chemical and Metallurgical Analysis Facility capable of supporting shipyard production and general installation environmental compliance testing requirements through the rehabilitation and conversion of historic Building 59.</p> <p>Chemical Metallurgical Laboratory = 2,907 m2 = 31,291 Square Feet</p> <p>REQUIREMENT:</p> <p>An adequate and efficiently configured chemical and metallurgical analysis facility is required to support the operation of ships stationed at Puget Sound Naval Shipyard. In support of the depot maintenance mission, the Shipyard needs to support overhaul, testing and recycling operations while assuring compliance with environmental laws and regulations. Puget Sound Naval Shipyard requires a Chemical and Metallurgical Analysis Facility to support multiple system requirements by providing the following analyses: Waterfront Chemistry, Metallurgical Testing, Nuclear Propulsion Plant Chemical Receipt Inspection Program, Production Support and Project Testing and Analysis, and compliance with federal, state and local environmental laws.</p> <p>CURRENT SITUATION:</p> <p>Puget Sound Naval Shipyard's Chemical and Metallurgical Analysis Facility is currently located within four buildings and four trailers. Building 371 was built in 1918 as a rooming house and restaurant and was purchased by the Shipyard in 1922. Building 453 was built prior to 1918 as a store building and was purchased by the Navy in 1938 and is connected to building 371 by a narrow walkway. Both facilities have had extensive modifications performed to adapt them for industrial use. Configuration of spaces within the existing buildings is not adequate to permit efficient use of space. The two multi-story buildings accommodate most of the laboratory functions, but the structural systems relationship to the circulation pattern of the building severely limit the options available for an efficient and safe layout within the buildings. The buildings currently housing the Shipyard's Analysis Facilities are old and not designed to survive a seismic event. Existing HVAC systems do not provide adequate ventilation or temperature controls for laboratory functions. Beyond documented safety violations, cross contamination from chemical</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00																
3. Installation and Location/UIC: N00251 PUGET SOUND NAVAL SHIPYARD BREMERTON, WASHINGTON																		
4. Project Title CHEMICAL METALLURGICAL LABORATORY	7. Project Number 416																	
<p>(...continued)</p> <p>analysis is affecting sample integrity. This cross contamination affects efficiency by causing periodic sample re-analysis because quality control requirements cannot be met. Lack of temperature and humidity controls causes periodic instrument failure which also affects sample results. Lack of adequate environmental controls results in numerous sample reports being flagged due to inability to meet test specifications. The facilities are not adequate to support laboratory operations. In addition, the Analysis Facility failed to be reaccredited with the American Industrial Hygiene Association (AIHA) due to problems with the building.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Continued use of obsolete, inadequate, seismically deficient facilities will result in dollars lost in rework, delays in producing the required analysis results, life safety hazards in the event of a significant earthquake (3 moderate earthquakes) and further potential losses of accreditation. Opportunity to save \$1.1M per year in direct and indirect costs associated with the current inefficiencies will not be realized. These inefficiencies will adversely affect major inservice engineering support changes or lifecycle support, research and development projects and the emerging technologies.</p>

10. Description of Proposed Construction					
<p>Modify approximately 186 m2 of the Explosive Handling Wharf deck by removing and replacing the existing asphaltic pavement and ballast where necessary, strengthening or replacing the deck panels, and adding concrete load bearing pads and missile erection bridge tie-downs. Modify existing service unit storage platform at upper level for storage of launch tube maintenance platform and davit, and replace guidance support equipment receptacles.</p>					
11. Requirement: <u>  </u> OLS Adequate: <u>  </u> OLS Substandard: <u>  </u> OLS					
PROJECT:					
This project modifies the existing Explosives Handling Wharf at Strategic Weapons Facility Pacific (SWFPAC) to add the capability of outloading/offloading TRIDENT II (D5) missiles. (Current mission)					
REQUIREMENT:					
Adequate outloading/offloading facilities are required to support the Initial Operational Capability for TRIDENT II (D5) missile processing and test and storage capability at SWFPAC.					
CURRENT SITUATION:					
The existing Explosives Handling Wharf is not capable of supporting the Missile Erection Bridge required for outloading and offloading TRIDENT II (D5) missiles. The missile handling configuration of the D5 is different

10. Description of Proposed Construction

Six-story Bachelor Enlisted Quarters (BEQ) with basement, pile foundation, reinforced concrete frame and walls, concrete floors, metal and built up roof. BEQ will provide 59 "2+0" configured modules, for 236 enlisted (E1 - E4s), consisting of two 2-sailor rooms, each with a semi-private bath, and will include lounge and recreational rooms, heads and laundries. The BEQ will be air conditioned, have emergency lighting, contain two passenger/freight elevators, and connect the cable television system to the existing BEQ system. Project will provide landscaping, irrigation, extending the arcade theme to the BQ's and provide comprehensive signage for the entire BEQ complex. Project will also construct new concrete frame and walls, and metal built-up roof on the second floor of the existing Navy Exchange Building for the Education Center and relocated

3. Installation and Location/UIC: N62588 NAVAL SUPPORT ACTIVITY NAPLES, ITALY		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 201	
<p>(...continued)</p> <p>Liberty Center. Facilities will be designed in accordance with the base Exterior Architectural Plan and the Capodichino Development Plan. They will have adequate utilities, be constructed to meet all Italian and U.S. building codes, including seismic criteria for Seismic Zone 3, fire and ventilation codes. Technical operating Media (dual language and electronic media) will be provided. Also included are force protection features for the new BEQ including specially designed windows, blast resistant southern wall, and structural integrity to prevent building collapse. Demolish Building 444 (BEQ-2, 198 m2) and relocate the Marine General Purpose Building (Building 447) mechanical yard from the south to the east side of the building.</p> <p>Intended grade mix: 236 E1-E4; Maximum utilization: 236 E1-E4.</p>		
<p>11. Requirement: <u>1,111 PN</u> Adequate: <u>405 PN</u> Substandard: <u>0 PN</u></p> <p>PROJECT:</p> <p>Constructs a new Bachelor Enlisted Quarters (BEQ) with 59 "2+0" modules for active duty enlisted personnel in the Naples area, as part of the Naples Improvement Initiative (NII).</p> <p>Bachelor Enlisted Quarters = 6,645 m2 = 71,526 Square Feet  Bachelor Enlisted Quarters = 5,251m2 = 56,521Square Feet  Liberty Center = 613 m2 = 6,598 Square Feet  Education Center = 781 m2 = 8,407 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate housing is required for enlisted personnel who perform operations at Naval Support Activity, Naples, which is the command center for all naval operations in the Mediterranean. This facility is an important increment in Commander in Chief, U. S. Naval Forces, Europe's (CINCUSNAVEUR) goal to house all E1-E4's on base and is required as part of the relocation to overcome current problems of inadequate contingency readiness, lack of force protection, poor quality of the existing leased structures, and seismic vulnerability. This facility will provide adequate housing for enlisted personnel in the Naples area, allowing them to move into seismically safe on-base housing incorporating force protection features. The project will also provide educational space for the military to further their careers and education. Additionally, the project constructs a recreation facility where sailors can relax in a non-alcohol environment. This facility is a vital element of the Naples Improvement Initiative (NII).</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62588 NAVAL SUPPORT ACTIVITY NAPLES, ITALY		
4. Project Title BACHELOR ENLISTED QUARTERS	7. Project Number 201	
<p>(...continued)</p> <p>CURRENT SITUATION:</p> <p>The existing BEQs are located in two noncontiguous locations: Capodichino, and Pozzouli. There are currently insufficient quarters in the Naples area for the 1,111 enlisted personnel. Enlisted personnel currently stay in local hotels while waiting for a BEQ room. The 152 units located in Pozzouli are classified "inadequate." They are seismically unsafe, do not meet current force protection standards, and do not meet current habitability standards. Personnel in these existing inadequate bachelor quarters do not live and work at the same compound. Therefore, they are either bused, or they drive to work, requiring long commutes. This reduces readiness in the event of an emergency and reduces productivity. The majority of functions at NSA Naples have been relocated or will relocate to the Capodichino site. The Pozzouli facility does not meet force protection standards. Since it is not located on a secure base, it could be the target of a terrorist attack and is very vulnerable due to its construction. The Pozzouli facilities are subject to collapse during an earthquake. The facilities are subject to an evacuation order by the Government of Italy under existing seismic contingency plans. The only non-alcoholic recreation facility available to single sailors on Capodichino is a converted storage room in the basement of Building 443. The educational facilities at Capodichino are insufficient to handle the required education of the military living and working at this site. The continuing education facilities in the Naples area are insufficient to administer an adequate and high quality program.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this project, the existing facilities will continue to be vulnerable to terrorist attack and collapse in an earthquake. High and rising maintenance and repair costs will continue to be required in order to keep the existing structures in useable condition. Man-hours will continue to be wasted traveling between BEQ and duty station. High Temporary Living Allowance (TLA) and Overseas Housing Allowance (OHA) costs associated with insufficient berthing space will continue to burden dwindling resources. This will continue to produce lower productivity and morale due to separation from support functions, including recreation facilities located at Capodichino, and reduced quality and availability of continuing education. The inadequate and insufficient recreation and education facilities do not allow single sailors access to the needed educational opportunities and the non-alcoholic recreation that the Navy encourages.</p>

10. Description of Proposed Construction

This project is the second of four proposed phases of a recapitalization Plan for NAS I (personnel support area) at U.S. Naval Air Station, Sigonella. Phase one is FY99 P-742, Navy Exchange (nonappropriated funded), Phase three will provide a Morale, Welfare and Recreation Center and a Child Care Center, Phase four will provide a Bachelor Enlisted

3. Installation and Location/UIC: N62995 NAVAL AIR STATION SIGONELLA, ITALY		
4. Project Title COMMUNITY FACILITIES	7. Project Number 620	
<p>(...continued)</p> <p>Quarters, Lodge and School Expansion. This project will construct five separate and usable facilities for Quality of Life Support; a chapel/religious education building, a community building, an administration building, an enlisted dining facility, and a security facility including two gate houses. The existing child development center will be relocated. All buildings, two stories or more, will be designed to handle an additional story for future expansion if necessary. The community and administration buildings will be three stories, chapel/religious education facility, enlisted dining facility/club, two stories, and a security building and gate houses one story (these two facilities will be hardened as per force protection criteria). All facilities will be handicapped accessible; two stories and more will be provided with elevators. These facilities (except gate houses) will be concrete and/or steel frame buildings with insulated metal panels, concrete foundation and structural floor, clay tile pitched roof on insulated metal decking and steel truss. The facilities will be heated and cooled, and provided with fire protection including sprinklers, information systems, alarm and detection system and connected to the base wide utility system. New base-wide utility distribution systems will be provided as well as some new roadways, parking, a third well for water requirements, technical operating manuals, paving and site improvements. Construction to seismic zone four. Demolition of 33 buildings and 3 Water Storage Tanks is included.</p>		
<p>11. Requirement: <u>  OLS  </u>                      Adequate: <u>  OLS  </u>                      Substandard: <u>  OLS  </u></p> <p>PROJECT:</p> <p>This project is the second of a four phase development for the recapitalization plan for NAS I (personnel support area) at U.S. Naval Air Station, Sigonella, Sicily and constructs seven Quality of Life support facilities as part of the overall recapitalization plan for NAS I. (Current mission)</p> <p>REQUIREMENT:</p> <p>Adequate and efficiently configured facilities are required to provide and develop a systematic, methodical and executable program for the recapitalization of facilities at NAS I. This project will reconfigure NAS I to significantly enhance functional efficiency and the Quality of Life environment as well as provide for some force protection, safety, and fire protection deficiencies; demolish and/or replace all low equity, obsolete, inefficient, high maintenance and repair (BMAR) facilities and structures; reclaim and optimize use of scarce and wasted real estate,</p>		

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N62995 NAVAL AIR STATION SIGONELLA, ITALY		
4. Project Title COMMUNITY FACILITIES	7. Project Number 620	
<p>(...continued)</p> <p>replace deteriorated, energy inefficient utility systems; and create expansion opportunities associated with future mission changes and expansion/consolidation. U.S. Naval Air Station, Sigonella, considered the "Hub Of the Med", provides the prime logistic support for Naval Operations (both U.S. and NATO) in the Mediterranean. It is the host activity for several commands and mission support in the region. Existing facilities are not constructed to seismic criteria or fire protection criteria. In addition, energy efficient controlled facilities are required to reduce output in the near future. Project will eliminate life safety problems between pedestrian and vehicle traffic throughout the base.</p> <p>CURRENT SITUATION:</p> <p>Currently, NAS I is dense with dispersed facilities which allows for no available land for expansion. Since NAS Sigonella is the primary core base for fleet logistics and airfield operations, it is actively being considered to become a receiver site for functions from other activities as proposed in a theater realignment plan for the Mediterranean. NAS I is the primary personnel support area for Sigonella. Therefore, a recapitalization plan for this area provides for the consolidation of various facilities to significantly enhance functional efficiency and the Quality of Life environment in support of approximately 8,500 people. The majority of the existing facilities are deteriorated, inefficient, high maintenance cost, and dysfunctional from the uses they were originally built for. These facilities are deficient in seismic criteria, fire protection and handicap accessibility. In addition, most of the older facilities were not constructed to seismic criteria and therefore would not withstand minimum seismic activity. This project will allow for the recapitalization for optimum use of scarce and wasted real estate. It will also create expansion opportunities associated with future mission changes, as well as provide for energy-efficient controlled facilities.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>The recapitalization plan of NAS I will be jeopardized, as this project is the second phase of a four phase development of the personnel support area at NAS Sigonella. Continued use of existing facilities which are deteriorated, inefficient, high BMAR will prohibit improvement of Quality of Life and negatively affect expansion/consolidation possibilities.</p>

10. Description of Proposed Construction					
<p>Construct a multi-story, semi-hardened facility to house a communications center; pile foundations with concrete structure, floors and roof; roof will be designed with dedicated penetrations to support various antenna systems; ventilation and air conditioning system, hot and cold domestic water, sanitary fixtures, electric service and distribution equipment, interior lighting, telephone, fire alarm, and sprinkler system. Sensitive Compartmented Information System type construction will be utilized, along with raised flooring, Intrusion Detection System and entry control systems, grounding, emergency generators, and an Uninterruptible Power Supply System. Project includes parking, roads, exterior landscaping, and architecture to match the local area. Demolition of paving.</p>					
11. Requirement: <u>5,216 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u>					
PROJECT:					
This project provides the Communications portion of the Operations Control Center for secure command and control for U.S. Naval Forces Central Command (COMUSNAVCENT), and the US Fifth Fleet (COMFIFTHFLT).					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N63005 NAVAL ADMIN SUPPORT UNIT SOUTHWEST ASIA		
4. Project Title OPERATIONS CENTER	7. Project Number 904	
<p>(...continued)</p> <p>Operations Center (Phase II) = 5,216 m2 = 56,145 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>An adequate and properly configured facility is required to support forward deployed COMUSNAVCENT staff, the Navy component commander of US Central Command, and Commander, U.S. Fifth Fleet. This includes the need for proper communications support for COMUSNAVCENT to exercise operational control of all Naval forces in the region and act as Commander Joint Task Force for all joint and combined operational exercises. The COMUSNAVCENT staff of about 350 people are tasked with providing logistics, intelligence, communications, legal, medical and administrative support for the Navy forces under their area of responsibility.</p> <p>CURRENT SITUATION:</p> <p>COMUSNAVCENT moved ashore to austere temporary facilities in 1992 with the departure of the flag ship USS LaSalle from the Persian Gulf region, after Operation Desert Shield/Desert Storm. Personnel (350 people) and equipment are scattered in approximately 25 temporary trailers, which do not provide adequate security for personnel, and do not provide adequate security for communications with Naval forces operating throughout the region, including the Middle East and Persian Gulf areas. The trailers provide only about one sixth of the space required to properly conduct the mission. Some of the trailers are located less than the required 400 foot anti-terrorist setback from the perimeter fence. The decentralization and lack of properly-configured facilities results in inefficiencies. The temporary facilities are deteriorating and most are beyond economic repair. Space is not available in the existing makeshift facilities for the additional equipment required to enable the OPCON Center to conduct peacetime missions effectively.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Without this project, interception of communications could impact the security of U.S. forces operating throughout the Central Command Area, including the Middle East and the Persian Gulf. Also, terrorist activities will continue to be a threat to personnel working in trailers instead of the proposed facility with semi-hardened construction and a four hundred foot setback from the perimeter fence. COMUSNAVCENT will continue to operate out of temporary trailers, with insufficient power,</p>

10. Description of Proposed Construction					
<p>The host nation support required varies for each individual NATO project. These funds will be used to cover non-NATO eligible expenses such as host nation costs, life safety, functional utility/livability, energy, administrative expenses, design support, joint formal acceptance inspection and audit, currency fluctuation losses, and restoration floor.</p>					
11. Requirement: <u>  0LS  </u> Adequate: <u>  0LS  </u> Substandard: <u>  0LS  </u>					
PROJECT:					
Execute role as host nation and construction agent for NATO Infrastructure projects in CONUS, Iceland and Bermuda, in accordance with DoD Directive.					
REQUIREMENT:					
The Host Nation Infrastructure Support (HNIS) program provides a source of U.S. funds for each NATO-funded project to pay host nation costs. This authority is not used to increase the scope of a facility for U.S. functions, such work is included through conjunctive funding in separate MILCON projects.					
CURRENT SITUATION:					
Navy is the construction agent for NATO Infrastructure projects at locations where the United States is host nation. HNIS responsibilities					
<i>(Continued On DD 1391C)</i>					

1. Component NAVY	<b>FY 2001 MILITARY CONSTRUCTION PROGRAM</b>	2. Date 2/14/00
3. Installation and Location/UIC: N65160 VARIOUS LOCATIONS		
4. Project Title HOST NATION INFRASTRUCTURE	7. Project Number 201	
<p>(...continued)</p> <p>involve funding certain program costs, such as, land acquisition, source utilities, roads and parking, administrative expenses, design support, joint formal acceptance inspections (JFAI) and audits, currency fluctuation losses, and restoration floor. NATO eligibility criteria stipulates only Minimum Military Requirement (MMR) for wartime occupancy and does not include peacetime related features such as fire protection or energy conservation. This request is based on approved NATO Infrastructure projects.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Timely U.S. funding for the work will not be possible. Delays in executing these projects for lack of HNIS funding will deprive operating units of sorely needed facilities and may be a source of embarrassment for the U.S.</p>

<p>(...continued)</p> <p>11. Requirement: <u>139 PN</u>                      Adequate: <u>0 PN</u>                      Substandard: <u>0 PN</u></p> <p>PROJECT: Provides a replacement Bachelor Enlisted Quarters and a new Enlisted Dining Facility.</p> <p>Bachelor Enlisted Quarters/Dining Facility = 4,415 m2 = 47,523 Square Feet Dining Facility = 3,740 m2 = 40,257 Square Feet Technical Operating Manual = 675 m2 = 7,266 Square Feet (Current mission)</p> <p>REQUIREMENT:</p> <p>Rapid response by security personnel is critical to the Command's mission performance. Berthing must remain on station due to mission sensitivity and national operational security. The facility must include additional special security features including anti-terrorism design, sound attenuation and special security measures. Adequate housing is required for E1-E4 and E5-E9 personnel assigned to the Command. The Command is staffed principally by junior personnel who are required to live on the base to be available for rapid operational response on the base.</p> <p>CURRENT SITUATION:</p> <p>The existing wooden facility was built in 1958 and is at the end of its economic life. The plumbing is badly corroded, is continually backing up and is failing. The electrical wiring and circuit breakers are inadequate to meet current day requirements and do not meet code. Heating, ventilation and air conditioning systems are mismatched and zoned improperly. The building is a fire safety hazard because multiple layers of concealed, abandoned ceilings exist, creating dead spaces where fire can spread rapidly and widely undetected, endangering the occupants of the building. There is a continuous mildew and termite problem due to poor ventilation, resulting in poor living conditions and poor morale. The building is overcrowded, with two to four personnel occupying a space where normally one would, according to current standards, and there is not enough storage for required specialized security gear. Gang heads are in use, violating current standards for this grade level. Annual maintenance of this facility is in excess of \$400,000 per year, and uses up most of the maintenance budget for the entire activity. The current infrastructure is not large enough to be rehabilitated to comply with current bachelor quarters standards. No other facilities exist on base, and personnel must be berthed on base. No other site or alternative is</p>

3. Installation and Location/UIC: NC1002 VARIOUS LOCATIONS																												
4. Project Title BACHELOR ENLISTED QUARTERS & DINING FAC	7. Project Number 608																											
<p>(...continued) available to the Command.</p> <p>IMPACT IF NOT PROVIDED:</p> <p>Enlisted personnel will continue to live in unsafe, deteriorating conditions that do not meet life/safety codes, building codes, or special security features. Inadequate living conditions will adversely affect the morale of all the BEQ residents, reducing the operational ability of personnel to support the Command's highly sensitive mission. Additionally, the increased maintenance and operating fiscal requirements for this aging facility will continue to use up a majority of the Command's maintenance and repair budget. This severely restricts the Command from efficiently supporting other station facility requirements.</p>

10. Description of Proposed Construction					
<p>Funds to be utilized under Title 10 USC 2807 for architectural and engineering services and construction design in connection with military construction projects including regular program projects, unspecified minor construction, emergency construction, land appraisals, and special projects as directed. Engineering investigations, such as field surveys and foundation exploration, will be undertaken as necessary.</p>					
11. Requirement: <u>  </u> OLS Adequate: <u>  </u> OLS Substandard: <u>  </u> OLS					
PROJECT:					
<p>All projects in a military construction program presented for approval must be based on sound engineering and the best cost data available. For this reason, design is initiated to establish project estimates in advance of program submittal to the Congress. Based on this preliminary design, final plans and specifications are then prepared. These costs for architectural and engineering services and construction design are not provided for in the construction project cost estimates.</p>
